Follow-Up Questions

SUMMARY

Regarding the recent NRC inspection of Covance Clinical Research Unit in Honolulu, HI:

1. What date(s) did the licensee conduct principal activities at the Honolulu facility from January 2007 until it received licensed material there in 2010?

Answer: The licensee added the Honolulu facility to its license on 3/2/07. The licensee first received licensed material at that facility in 2010. The licensed material was subsequently shipped back to the vendor because the study was cancelled. Based on the licensee's radiation surveys since its receipt of licensed material, the facility has no residual contamination.

2. Since the 2006 inspection, did the licensee conduct principal activities at its Evansville, IN facility? If not, when did the licensee stop conducting principal activities at its Evansville, IN facility?

Answer: The licensee has not received licensed material at the Evansville facility yet.

Despite no use of licensed material for several years, the licensee wants to retain the license in case it gets a request to conduct licensed activities at the authorized locations.
