**Subject: Request for Inspection Procedure (IP) 95002, "Supplemental Inspection for One Degraded Cornerstone or Any Three White Inputs in a Strategic Performance Area."**

Reference 2 transmitted a Yellow Finding to Omaha Public Power District (OPPD) concerning the failure to have adequate procedures to protect against a design basis flooding event. Reference 3 announced that an IP 95002 supplemental inspection would be conducted at Fort Calhoun Station (FCS) to assess the OPPD actions to correct the Finding.

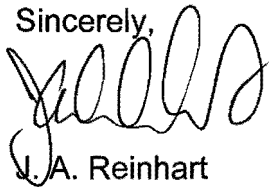

In response to References 2 and 3 FCS performed a root cause analysis and developed a corrective action plan to address the Yellow Finding. FCS has completed interim corrective actions to protect the station from a design basis flooding event. Additionally, OPPD will be providing a revision to the yellow finding response (Reference 4) prior to the Nuclear Regulatory Commission (NRC), IP 95002 supplemental inspection.

U. S. Nuclear Regulatory Commission  
LIC-11-0013

Based on the completed causal analysis, corrective action plans, and interim corrective actions, OPPD respectfully requests the NRC conduct the supplemental inspection, IP 95002, for the Yellow Finding documented in Reference 2.

This letter contains no commitments.

Sincerely,

J. A. Reinhart  
Site Vice President  
Fort Calhoun Station
