B 3.3.2 Seismic Monitoring Instrumentation

BASES

TRO The OPERABILITY of the seismic monitoring instrumentation ensures that sufficient capability is available to promptly determine the magnitude of a seismic event and evaluate the response of those features important to safety. This capability is required to permit comparison of the measured response to that used in the design basis for the unit. This instrumentation is consistent with the recommendations of Regulatory Guide 1.12 "Instrumentation for Earthquakes," April 1974. (Reference 1) except for Section C.1.a since no triaxial peak accelerographs are provided.

Table 3.3.2-1 identifies two types of instrument, which monitor seismic activity, and the location where the instruments are positioned. The Unit 1 Containment Foundation, Unit 2 Containment Foundation and ESSW Pumphouse Floor Accelerometer Channels have associated triggers. These triggers provide control room indication and annunciation.

ACTIONS The Actions are defined to ensure proper corrective measures are taken in response to the inoperable components.

Required Action B.1 ensures that an assessment is performed and reviewed to determine an acceptable period of continued operation.

TRS The TRSs are defined to be performed at the specified Frequency to ensure that the Seismic Monitoring Function is maintained OPERABLE.

The Technical Requirement Surveillances (TRS) are modified by two Notes.

Note 1 states that the TRSs for each Seismic Monitoring instrumentation Function are located in the SR column of Table 3.3.2-1.

Note 2 modifies the Surveillances to indicate that when a channel is placed in an inoperable status solely for performance of required Surveillances, entry into associated Conditions and Required Actions may be delayed for up to 6 hours provided either instrumentation location 1.d or 1.f is OPERABLE. Having either instrumentation location 1.d or 1.f OPERABLE provides sufficient instrumentation to detect and analyze seismic activity since they are located on the containment foundation adjacent to bedrock. Upon completion of the Surveillance, or expiration of the 6 hour allowance, the channel must be returned to OPERABLE status or the applicable Condition entered and Required Actions taken.
