U.S. Nuclear Reg. Commission,

Please make sure all safety standards are followed in regards to the Regarding South Texas Project Units 1+2 NRC 2010-0375 Docket Nos. 50-498; 50-499 Relicensing.

* Halt for safety reasons.

Aging reactors must be held to higher safety standards before a tragedy occurs.

* We count on you to watch out for our best interest so please make sure the correct action is taken. Stop the reactors and help ensure we are all safe.

* The vast amount of water taken up by these reactors is very much needed for other purposes.

Thank you for your time. Sincerely, Maria Nolan
