

MAY 21 1975

Docket Nos. 50-438 and 50-439

APPLICANT: Tennessee Valley Authority (TVA)

FACILITY: Bellefonte Nuclear Plant, Units 1 and 2

MEETING TO DISCUSS INDUSTRIAL SECURITY

On May 20, 1975, representatives of TVA met with the NRC staff to discuss industrial security associated with TVA's nuclear power plants and the Bellefonte plant specifically. The discussion was of interest to the Industrial Security and Emergency Planning Branch.

An attendance list is attached.

A summary of significant topics discussed is given below:

1. Potential Rule Changes. The staff answered several of TVA's questions regarding proposed 10 CFR 73.55. Several areas of the proposed rule that may be changed as a result of public comments were indicated. Some clarification was given as to our interpretation of several areas of the proposed rule as well as the potential implementation schedule.

The staff indicated that Regulatory Guide 1.17 would be revised to be consistent with the final form of 10 CFR 73.55 and also reference applicable Series 5 regulatory guides.

2. Clinch River Breeder Reactor. There was a short discussion of the staff's acceptance review of CRBR application in the area of industrial security. The discussion involved the proper documentation procedure to address the staff's acceptance review questions and address Regulatory Guide 1.70.15.

3. Bellefonte Nuclear Plant (BNP). Several areas of the general industrial security plan for BNP were discussed. The specific plan will be documented at the PSAR stage of review.
