Dear Mr. Moseley:

BELLEFONTE NUCLEAR PLANT UNITS 1 AND 2 - REPORTABLE DEFICIENCY -
UPPER STRESSING HEAD FOR ROCK ANCHOR - IE CONTROL NO. H00995F2

Initial report of the subject deficiency was made to NRC-IE, Region II, on September 16, 1975, and was followed by our interim reports from J. E. Gilleland to Donald F. Knuth dated October 16 and December 5, 1975, and February 9, 1976, and our April 12, 1976, interim report to John G. Davis. This is submitted as a fifth interim report. We expect to submit our next written report by August 12, 1976.

The metallurgical investigations being conducted by TVA and the post-tensioning contractor are incomplete at this time. Documentation of material furnished by the post-tensioning contractor is available; however, we plan to supply this information as a part of the final report.

Very truly yours,

J. E. Gilleland
Assistant Manager of Power
