Subject: STP - EEC Suction Strainer

Dick,

We had this discussion before but I think I should document this request formally before we go to ACRS.

In the Chapter 6 ACRS, there is an **ACRS action (#72)** that Dr. Wallis wanted to understand **how hydrodynamic load definition is developed and evaluated for ECCS suction strainer**. The action is for STP to address this in the Chapter 3 presentation. Our Chapter 6 advanced SER also made the statement that **the structural evaluation of the suction strainer is under Chapter 3.9.3**.

In your revised response to RAI 03.09.03-4 (eRAI 3689) in STP Letter U7-C-STP-NRC-090233, a site-specific ITAAC in Table 3.0-13 was proposed (it is Table 3.0-14 in Revision 4). This proposed ITAAC is to ensure ASME Class 1, 2, and 3 components are designed to meet requirements in ASME Section III. Although it is acceptable to use ITAAC to track the completion and the quality of the design report, this action does not provide any information to address ACRS' request.

In our prior conversation, I've asked if NINA has a plan and schedule to complete the design report of the ECCS system, which was originally targeted for March 2011. Please advise your plan, and any plan that NINA may have to address this ACRS action.

Regards

Tom Tai
