**Subject:** Acceptance Review For ASME Section XI inspection Program Relief Requests For the 10-Year Inspection Interval

Wanda,

By letter dated March 30, 2011, Dominion Nuclear Connecticut, Inc., submitted relief requests for Millstone Power Station Unit 2, ASME Section XI inspection Program Relief Requests For the 10-Year Inspection Interval (TACs ME5998 – ME6007). The purpose of this e-mail is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of these relief requests. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the requests have any readily apparent information insufficiencies in their characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed relief requests in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.

If you have any questions, please contact me at 301-415-3204.
