|License No.: 13-18692-01 |Control No.: 574363  
-----

**SUMMARY**

We reviewed the requesting amendment request and found we were unable to continue this licensing action until we received additional information concerning the items noted below:

1. It appears that the proposed AU, Robert C. Leatherman, has been listed previously on another Radioactive Materials License. If this is the case, please provide a copy of the prior authorization information.

**RESPONSE:** Licensee indicated that the proposed AU, Dr. Leatherman, has not been approved previously on another license. All submitted versions of Form 313A were prepared for his authorization at King's Daughters' Hospital and Health Services. Accordingly, that information should be reviewed in determining whether to grant Dr. Leatherman AU status. No further information is required at this time.

2. The NRC no longer issues limitations based on medical procedure. However, the use of byproduct material authorized by 10 CFR 35.300 may be limited by type of administration (oral, for example), or quantity (typically 33 mCi or less). Please confirm whether such limitations should be applied for either of the Authorized Users Melvin J. Skiles, M.D., or William Skiles, M.D.

**RESPONSE:** Licensee indicated that the 10 CFR 35.300 material authorizations for Dr. M. Skiles and Dr. W. Skiles may be qualified as limited to oral administration of 33 mCi or less of sodium iodide I-131. No further action is required.

3. A possession limit is required for the authorization to use iodine-131 byproduct material, under 10 CFR Part 35.300. Please indicate a possession limit.

**RESPONSE:** Licensee indicated it would be appropriate to limit 35.300 material to a total possession limit of 1 curie or less of I-131. No further action is required.
