Subject Additional information for NMED Event 050778

The inspector reviewed the NMED Event and gave me a list of updates and corrections.

(1) The source activity as determined by a medical physicist for the day when the event occurred was 7,047 Ci. This changes the value documented in line 3 of the narrative, the activity in two places under the section "Medical Event Information," and the activity section in the "Source/Radioactive Material Information" section.

(2) Under the section "Source/Radioactive Material Information", the following information is added for the sealed source:

Manufacture [REDACTED]
Model No.: [REDACTED]
Serial No.: D36A-8119

(3) Of note, the inspection report for the March 2006 inspection will be placed in ADAMS shortly.

I will review the report when it comes out for any other pertinent information. The branch chief indicates that the event should remain closed.
