ORGANIZATION NAC International (NAC)				
SUBJECT Discussion concerning misload possibility for Model No. MAGNATRAN transport cask Docket No. 71-9356				
SUMMARY (Continue on Page 2)				
Participants NAC: Wren Fowler, Holger Pfeifer NRC: Meraj Rahimi, Zhian Li, Jeremy Smith, Jennie Rankin				
Staff has issued Request for Supplemental Information to NAC concerning the Model No. MAGNATRAN transportation cask application. A telephone conversation was requested by NAC to further discuss misload analysis (RSI 6-2). Staff believes that based on the reference in the application to the EPRI study, misload should not be classified as a non-credible event. As a result of this conclusion, burnup verification measurements or misload analysis would need to be performed. In addition, the bounding parameters of a potential misload analysis were discussed. NAC indicated they would explore the possibility of augmenting the criticality analysis to include a misload analysis.
