Subject: Docket ID NRC-2010-0131: Suspend the AP1000 approval

Dear Secretary Vietti-Cook,

We cannot afford to build nuclear reactors. Because disaster can occur at any nuclear reactor, the NRC needs stop the new Westinghouse AP1000 reactor design considered for construction in Georgia, South Carolina and other states.

I demand that the NRC reject the license application.

Addressing safety concerns, not satisfying the industry, must be the Nuclear Regulatory Commission's primary concern. NRC engineer John S. Ma's non-concurrence with the review of the reactor raised the possibility that the AP1000's shield building could shatter "like a glass cup". It would be indefensible for the NRC to move forward without further addressing that weakness. Also, Westinghouse has not satisfactorily proved that the thin steel containment shell over the reactor would be effective during severe accidents or that the reactor could be properly cooled in conditions similar to those at Fukushima.
