# JOB PERFORMANCE MEASURE VALIDATION CHECKLIST

NOTE: All steps of this checklist should be performed upon initial validation.

Prior to JPM usage, revalidate JPM using steps 8 and 12 below.

- 1. Task description and number, JPM description and number are identified.
- 2. Knowledge and Abilities (K/A) references are included.
- 3. Performance location specified. (in-plant, control room, simulator, or other)
- 4. Initial setup conditions are identified.
- 5. Initiating cue (and terminating cue if required) are properly identified.
- 6. Task standards identified and verified by SME review.
- 7. Critical steps meet the criteria for critical steps and are identified with an asterisk (\*).

	asterisk (*).		
8.	Verify the procedure(s) refere Procedure BOP CV-15 Procedure Procedure	Rev:	ent revision:
9.	Verify cues both verbal and vi	sual are free of conflict.	
10.	Verify performance time is acc	curate	
11.	If the JPM cannot be performed revise the JPM.	ed as written with proper response	es, then
12.	When JPM is initially validated validations, sign and date below	d, sign and date JPM cover page. ow:	Subsequent

Updated to revision 11 of BOP CV-15

### SIMULATOR SETUP INSTRUCTIONS

1) Reset to IC-21

NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.

- 2) Close 1CV8149A-C, and 1CV459 and 1CV460. Close 1CV8105 and 1CV8106.
- 3) When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist
- 4) This completes the setup for this JPM

- 1. You are the Unit 1 Assist NSO.
- 1CV459 has failed closed and MM are investigating the cause of the failure.
- Normal charging has been isolated.
- 4. Reactor power is < 99.5%.

#### **INITIATING CUE**

- 1. The US directs you to establish excess letdown to the VCT using the loop drains and BOTH letdown heat exchangers to for maximum cooling.
- 2. The SM does NOT desire flow to be directed to the VCT spray nozzle.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

RECORD	START TIME:	
KEGGKD	SIAKI IIWE.

### SIMULATOR SETUP INSTRUCTIONS

## 1) Reset to IC-7

NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.

- 2) Place the Master Pressurizer Level Controller in MANUAL.
- 3) Raise Pzr level to at least 1% above program level, then control charging so level is <u>slowly</u> rising.
- 4) When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist
- 5) This completes the setup for this JPM

- 1. You are the unit NSO.
- 2. Unit is in Mode 3, Hot Standby.
- 3. Plant heatup is in progress, using 1BGP 100-1.
- 4. Letdown flow is 120 gpm.

#### **INITIATING CUE**

The US requests you continue in the heatup procedure starting at step 67 by placing pressurizer level control in automatic.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

# Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. New JPM

## SIMULATOR SETUP INSTRUCTIONS

## 1) Reset to IC-21

NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.

- 2) Close 1SX 016B
- 3) When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist
- 4) This completes the setup for this JPM

- 1. You are the Unit 1 Assist NSO.
- 2. Unit 1 had an automatic Safety Injection Actuation.

#### **INITIATING CUE**

1. The Unit Supervisor directs you to perform 1BEP-0, Step 7 to Verify RCFC's are running in Accident Mode.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

#### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

RECORD START TIME:

# Revision 0

New JPM

#### SIMULATOR SETUP INSTRUCTIONS

1) Reset to IC-7

NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.

- 2) IMF CV19 to fail RMCS.
- 3) IMF CV16 8 to fail 1LT112A (VCT Level Transmitter) to 8%.
- 4) **IMF CV17 8** to fail 1LT185 (VCT Level Transmitter) to 8%.
- 5) **IMF RX13A**, **RX13B**, **RX13C 91** to fail Pressurizer Level to 91% indicated level.
- 6) MRF zao1li462 80 to fail LI462 to 80% indicated level.
- 7) Close 1IA065 and 1IA066.
- 8) When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist
- 9) This completes the setup for this JPM

#### SIMULATOR OPERATING INSTRUCTIONS

1) Maintain Pressurizer Level below 92% throughout this JPM.

- 1. You are the Unit 1 NSO.
- Unit 1 is in MODE 3.
- 1IA065 and 1IA066 have failed closed due to an air line break.
- 4. Unit 1 Boric Acid Transfer Pump has tripped and cannot be restarted.

#### **INITIATING CUE**

The Unit Supervisor directs you to take actions in accordance with 1BOA SEC-4, Loss of Instrument Air, starting at step 3, while the other operators implement 0 and 2BOA SEC-4.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

#### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

RECORD START TIME:	
--------------------	--

	<u>ELEMENT</u>		<u>STANDARD</u>	SAT	UNSAT	Comment Number	
1.	Refer to 1BOA SEC-4, Loss of Instrument Air	0	LOCATE and OPEN 1BOA SEC-4, Loss of Instrument Air				
2.	Control RCP Seal Injection	•	Check 1CV121 Not Failed OPEN 1CV121 demand is at minimum and charging flow is at 52 GPM				
3.	Check VCT level	•	VCT level indicates less than 10%				
*4.	Open RWST to CV pump suction valves	•	Open at least ONE of these: 1CV112D & E				
*5.	Close VCT outlet valves	•	Close at least ONE of these: 1CV112B & C				
NOTE  Alternate path is initiated in the following step.							
*6	Maintain Pzr level	•	Because Pressurizer level is 91%: Verify 1CC685 is open. Stop 1A CV pump				
7.	Raise SX flow to CC heat exchanger	•	Direct EO or request US to direct EO to throttle open SX to CC heat exchanger valve (1SX007)				
Cue: This JPM is completed.
