Consultant Hired:	N	Event Closed by State:	Y

Narrative:

A patient was scheduled for a routine stress test without myoview and the technologist misread the order thinking the physician ordered a stress cardiac perfusion scan. The patient was injected with 25 millicuries of Tc-99m myoview. The technologist was retrained on the correct way of interpreting orders to prevent future occurrences. The physician and patient were notified. No adverse effects on the patient.
