January 21, 1980

Mr. A. Schwencer, Chief
Operating Reactors Branch #1
Division of Operating Reactors
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Gentlemen:

Docket No. 50-305
Operating License DPR-43
Containment Purge and Vent System

Our December 10, 1979 letter to Mr. A. Schwencer from Mr. E. R. Mathews responded to long and short term commitments for our containment purge and vent system isolation valves. Subsequent phone conversations with members of the NRC staff have revealed specific information concerning limiting the purge valve opening to 30-50 degrees (item 2a in the October 23, 1979 letter to Mr. Mathews from Mr. A. Schwencer). We agree to meet the NRC staff position in regards to restricting valve opening pending confirming technical verification from the valve vendor or receipt of specific NRC staff evaluation applicable to the Kewaunee plant. As the valve vendor was unavailable to provide a schedule of completing this evaluation or providing the required mechanical steps for the valves as of this writing, information concerning the evaluation and mechanical component delivery will be forwarded by telecon as it becomes available.

Very truly yours,

E. R. Mathews
E. R. Mathews, Vice President
Power Supply and Engineering
