WISCONSIN PUBLIC SERVICE CORPORATION, KEWANEE NUCLEAR POWER PLANT,  
QUESTIONS RELATING TO INSTRUMENTATION AND CONTROL, DOCKET 50-305

DRL:I&PTS:ODP

RT-326

The purpose of this memorandum is to present the status of the review of the Kewanee Nuclear Power Plant by I&PTB and to suggest a method by which we can proceed with our review in order to be prepared for the February 2, 1968 meeting with the applicant.

In a conversation between O. D. Parr of I&PTB and R. Smith of RPB#5 in December 1967, Mr. Parr pointed out that the Kewanee PSAR, Section 7, Instrumentation and Control, was inadequate. Mr. Smith was requested to have the applicant supply the same information previously requested for Prairie Island. Amendment No. 1 to the Kewanee PSAR dated January 2, 1968, failed to contain the requested information.

Mr. Parr suggested to Mr. Smith on January 16, 1968, that we could proceed with our review of the application, making use of Amendment No. 3 to the Prairie Island PSAR, which contains the required information, if we knew that Section 7 for the Kewanee PSAR would be revised accordingly. Mr. Smith stated that he would suggest this approach to the applicant and advise us on Thursday January 18, 1968, whether to proceed in this manner.

In addition to having Section 7 of the PSAR revised, please have the applicant address the questions contained in the ACRS letter on instrumentation and control for Diablo Canyon in the next amendment submitted.

cc: S. Levine
