REVIEW OF PREOPERATIONAL RADIOLOGICAL MONITORING DATA FOR KEWAUNEE  
(TAR-1051)

In response to your request, we have reviewed the preoperational environmental radiological monitoring data for 1973 for the Kewaunee Nuclear Power Plant to determine if any changes should be made in the existing technical specifications. After examining the subject data, we find no reason for changing the technical specifications based on information presented in the preoperational monitoring reports for 1973.

During our review of the technical specifications, however, it became immediately apparent that there were a number of areas which should be updated to reflect current Staff policy, in addition to converting the radiological monitoring program from Appendix A to Appendix B technical specifications. It is our understanding that a program updating review will be automatically called for when the conversion from Appendix A to Appendix B occurs (following the issuance of the environmental tech spec guide). We look forward to participating in that review.

This review was conducted by T. Essig, RAB/L.
