

January 19, 1973

J. M. Hendrie, Deputy Director for Technical Review, L

CONTINUING TECHNICAL REVIEW FOR KEWAUNEE NUCLEAR POWER PLANT

Your assistance is requested in performing the evaluation of and preparing appropriate staff testimony on the generic issues relating to fuel densification, high-energy fluid lines outside containment and containment and sub-compartment pressures for Kewaunee. The following information is provided:

Plant Name:	Kewaunee Nuclear Power Plant
Licensing Status:	OL
Docket Number:	50-305
Responsible Branch and Project Manager:	PWR-2 L. Crocker (x 7407)
Technical Review Branches Involved:	Reactor Systems Branch Auxiliary and Power Conversion Systems Branch Containment Systems Branch
Target Date for Completion:	January 29, 1973

The public hearing on the Kewaunee operating license is now scheduled to start on February 7, 1973. All parties to the hearing must file direct testimony with the hearing board by January 30, 1973, including testimony on the generic issues identified. Due to the limited time available, it is recognized that evaluation and preparation of testimony will be very difficult.

Advance copies of the Kewaunee submittal on fuel densification were received on January 18, 1973 and are being distributed. The remaining copies should be available about January 23, 1973.

Additional information pertaining to containment pressure and compartment differential pressures is scheduled to be filed on January 22, 1973.

The response to our criteria for routing of high-energy fluid lines outside containment will be available on January 26, 1973.

If complete evaluation cannot be accomplished in time to meet the January 30, 1973 date for filing staff testimony, as appears likely,
