Tekia - As a test I scanned two pages from ML110900190, which clearly had legibility issues when looking at the ADAMS version. The attachment is my scan of the same two pages from a hard copy of the letter. It scans fine for me. The ADAMS version of these two pages clearly is showing an echo of the text and Table from the next page of the original submittal letter. The shadowed text is the Commitments Table in the letter. Since the original letter was not double-sided it should not be a paper quality issue. I talked to our IT folks and they think it might be either a memory problem with NRC scanner, or perhaps the scanner intensity is too high, because even the text that should be on the page is too heavy.

Other pages just have horizontal line across the pages. Clearly these are not from the original submittal letter.

Let me know when you would like to discuss further.

Thanks.  
Dave Distel
