Glen Ellyn, Illinois 60137

Gentlemen:

REF: Docket 50-305  
Operating License DPR-43

In accordance with Section 6.6.2.b.3 of the Kewaunee Nuclear Power Plant Technical Specifications the following Unusual Event Report is provided.

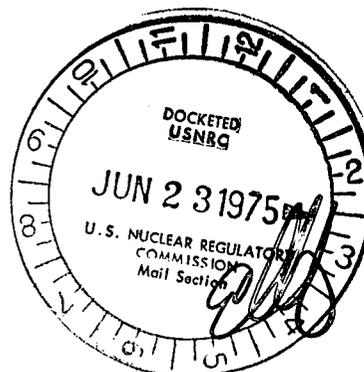

On May 21, 1975, it was discovered by the plant staff that valves SI-350A, SI-350B, SI-351A, and SI-351B (Containment Sump Isolation Valves) were not included in the scheduled Surveillance Test Program and thereby were not being tested in accordance with Section 4.5.b.2.a of the Technical Specification. Upon discovery of this deficiency in the Surveillance Procedure Program, a temporary test procedure was prepared and run to verify operability of these valves. All of the above mentioned valves operated properly; therefore, this omission in testing did not result in danger to the health and safety of the public. The Surveillance Program is being revised to include the operability checks for these four valves.

Very truly yours,

E. W. James  
Senior Vice President  
Power Supply & Engineering

EWJ:sna
