Regulatory Docket File

TELEGRAM

Mr. James G. Keppler
Regional Director
Directorate of Regulatory Operations Region
Glen Ellyn, Illinois

SUBJECT: Docket 50-305
Operating License DPR-43
Abnormal Occurrence Report

In accordance with the requirements of Technical Specifications, Paragraph 6.6.2.a and 1.0a.1(e), we submit the following:

Report Number: 50-305/74-4

Occurrence Date: April 9, 1974 0105

Facility: Kewaunee Nuclear Power Plant
Kewaunee, Wisconsin

Identification of Occurrence: Hair line crack in instrument impulse line

Conditions Prior to Occurrence: Reactor Critical - 3% power

Normal Operating Temperature 547°F
Normal Operating Pressure - 2235 psig
Normal Charging and Letdown

Description of Occurrence:

An Auxiliary Operator in the area observed a water spray from the piping in the charging room. The spray resulted from a hair line crack in the 3/8 inch diameter tubing which functions as the sensing or impulse line for the flow meter in the charging system. The leak was located in the impulse line and it was isolated. Plant conditions remained normal. The area was roped off and the area particulate monitor which senses the atmosphere in the charging room was checked and gave no indication of high airborne activity.

Calvin Giesler
