Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

A prime example: the Indian Point plant in Buchanan, N.Y., which your own commission has classified as the U.S. plant most vulnerable to meltdown caused by an earthquake.

I'm writing to demand that you take immediate action to shut down Indian Point and protect the lives of local residents.

As you know, 20 million people live within 50 miles of Indian Point -- the same radius around Fukushima that was quickly evacuated after the disaster there. Could the same quick evacuation be done in the event of a problem at Indian Point? It's unlikely. FEMA has called the plant's evacuation plan "unworkable."

This situation demands immediate attention. Any accident at Indian Point would put millions of people in immediate peril.

Please let me know how you intend to address this issue.

Sincerely,

Dana Berg

Washington, DC 20555-0001

Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

A prime example: the Indian Point plant in Buchanan, N.Y., which your own commission has classified as the U.S. plant most vulnerable to meltdown caused by an earthquake.

I'm writing to demand that you take immediate action to shut down Indian Point and protect the lives of local residents.

As you know, 20 million people live within 50 miles of Indian Point -- the same radius around Fukushima that was quickly evacuated after the disaster there. Could the same quick evacuation be done in the event of a problem at Indian Point? It's unlikely. FEMA has called the plant's evacuation plan "unworkable."

This situation demands immediate attention. Any accident at Indian Point would put millions of people in immediate peril.

Please let me know how you intend to address this issue.

Sincerely,

David Swartz

Washington, DC 20555-0001

Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

A prime example: the Indian Point plant in Buchanan, N.Y., which your own commission has classified as the U.S. plant most vulnerable to meltdown caused by an earthquake.

I'm writing to demand that you take immediate action to shut down Indian Point and protect the lives of local residents.

As you know, 20 million people live within 50 miles of Indian Point -- the same radius around Fukushima that was quickly evacuated after the disaster there. Could the same quick evacuation be done in the event of a problem at Indian Point? It's unlikely. FEMA has called the plant's evacuation plan "unworkable."

This situation demands immediate attention. Any accident at Indian Point would put millions of people in immediate peril.

Please let me know how you intend to address this issue.

Sincerely,

Virginia Elliott

Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

A prime example: the Indian Point plant in Buchanan, N.Y., which your own commission has classified as the U.S. plant most vulnerable to meltdown caused by an earthquake.

I'm writing to demand that you take immediate action to shut down Indian Point and protect the lives of local residents.

As you know, 20 million people live within 50 miles of Indian Point -- the same radius around Fukushima that was quickly evacuated after the disaster there. Could the same quick evacuation be done in the event of a problem at Indian Point? It's unlikely. FEMA has called the plant's evacuation plan "unworkable."

This situation demands immediate attention. Any accident at Indian Point would put millions of people in immediate peril.

Please let me know how you intend to address this issue.

Sincerely,

Gerald Aubrey
