The attached UniStar letter (ML100910085) states that based upon the finalization of the updated groundwater model and the results of groundwater pH monitoring, UniStar has concluded that a liner/monitoring system will be required for the Nuclear Island. The letter informs that UniStar is working with its partners to develop and finalize a schedule to complete the liner system design and incorporate that information into Final Safety Analysis Report (FSAR) Section 3.8 and the responses to questions in RAI sets 144 and 145.

The letter also states that a schedule for responding to RAIs 144 and 145 will be provided to NRC by April 9, 2010.

FYI.
