

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

July 26, 1988

Docket No. 50-305

Mr. D. C. Hintz
Vice President - Nuclear Power
Wisconsin Public Service
Corporation
P.O. Box 19002
Green Bay, Wisconsin 54037-9002

Dear Mr. Hintz:

SUBJECT: TRANSMITTAL OF PERFORMANCE INDICATOR DATA

The NRC Office for Analysis and Evaluation of Operational Data (AEOD) issues quarterly a report entitled "Performance Indicators for Operating Commercial Nuclear Power Reactors." Six performance indicators have initially been approved for implementation in the NRC's performance indicator program: automatic scrams while critical, safety system actuations, significant events, safety system failures, forced outage rate and equipment forced outages per 1000 critical hours. The latest report dated May 1988 was issued in two parts. The first part contains summary performance indicator information (e.g., number of scrams) in the form of graphs and trend charts. The second part contains more detailed performance indicator information (e.g., description of scrams) and tabular data used in the performance indicator statistics. In accordance with the policy guidance provided in SECY-87-207, a copy of this report has recently been placed in the Public Document Room (PDR).

Provided for your information are pages from the May 1988 Performance Indicator Report that are most pertinent to Kewaunee. Attachment 1 contains charts for each of the six performance indicators that show the quarterly data for Kewaunee against the quarterly industry average data. A four-quarter moving average of the data is also plotted on the charts to provide trend information. Attachment 2 includes two bar charts. The top bar chart is a measure of Kewaunee's recent performance (last two-quarter average) compared to earlier performance (previous four-quarter average). The bottom bar chart is a measure of the performance indicator four-quarter moving average for Kewaunee relative to the industry four-quarter moving average. Note that the bar graphs provide summary information that can also be obtained from the charts in Attachment 1.

In reviewing this data, it is important to recognize that the performance indicators are intended only for use as one of several tools which the NRC utilizes to monitor trends in performance for each plant. The Systematic Assessment of Licensee Performance (SALP) program, for example, is another independent approach for determining licensee and plant performance. Our approach to these performance indicators is that they can be used as assessment tools to identify declining performance, but only when the underlying causes of this declining performance are carefully assessed, evaluated and understood. Without this understanding, use of performance indicators can lead to a misinterpretation of the data.

Attachment 3 contains a 7-year history of the collective radiation exposure for Keweenaw (Table 11.1) and Attachment 4 contains a 3-year moving average of this same data (Table 11.2). Table 11.12, provided as attachment 5, contains the unit critical hours for each of the eight quarters considered in this report. Finally, Attachment 6 contains a brief description of Safety System Actuations (SSA's), Safety System Failures (SSF's), scrams and significant events (SE's).

You should note that the notation "PREDECISIONAL" has been crossed out on each page of the report. With placement of this report in the PDR and issuance of the pertinent pages to the holders of operating licenses, this designation is no longer applicable.

As discussed with Dan Ropson of your staff, there should be no safety system actuations counted for quarter 87-3 and no significant events counted for quarter 86-2. The next quarterly performance indicator report will reflect the corrected data.

If you have any questions on this matter, please contact me at (301)492-1379.

Sincerely,

Joseph G. Giitter, Project Manager
Project Directorate III-3
Division of Reactor Projects - III,
IV, V and Special Projects
