## PRM-50-96 (76FR26223)

From: Sent: To: Subject: Gayle Janzen [cgjanzen@comcast.net] Tuesday, June 21, 2011 5:12 PM Rulemaking Comments Comment in support of PRM-50-96 NRC-2011-0069 June 23, 2011 (4:40 pm)

OFFICE OF SECRETARY RULEMAKINGS AND ADJUDICATIONS STAFF

Dear Secretary,

I am writing in support of PRM 50-96 (NRC-2011-0069) submitted by Thomas Popik and the Foundation for Resilient Societies.

It's hard to understand why our govt. does nothing to plan for some sort of long-term electrical blackout caused by solar flares, or anything else for that matter. It's time to start learning from the Fukushima disaster and start preparing for the worst case scenario. If electricity is knocked out for a long period of time, how exactly will the govt. keep nuclear reactors from melting down? There's no time like the present to start preparing. It's foolish not to. And installing backup systems would create jobs!

This very prescient petition for rulemaking would require utilities to install reliable and renewable backup power systems, for a period of up to two years, to ensure cooling of irradiated fuel pools in the event of an extended loss of offsite power.

The Fukushima catastrophe demonstrates clearly the consequences of a loss of offsite power-to fuel pools and nuclear reactors alike. The NRC obviously must take substantive and speedy steps to address this issue.

The typical nuclear facility includes battery backup power that would last 4-8 hours, plus emergency diesel generators. While these generators were inoperable at Fukushima, and the accidents there took place in a relatively short amount of time, these generators are not designed to operate for extended periods of time.

PRM 50-96 was spawned by concern over large-scale solar flares that could cause long power outages in the U.S. As the Washington Post reported on June 21, 2011, a 2008 National Academy of Sciences study warned that a major solar storm "could knock out power in parts of the northeastern and northwestern United States for months, even years."

No U.S. nuclear reactor or fuel pool could withstand such a lengthy loss of power. Immense radiation releases would be certain.

Given the events at Fukushima, it appears nuclear facilities are not able to withstand power outages for even a fraction of that time. Thus, there is considerable urgency to improving back-up power systems.

I urge the NRC to quickly approve PRM 50-96 and to amend this petition to include suitable back-up power supplies for all nuclear reactors and fuel cycle facilities as well as the irradiated fuel pools.

Thank you,

Gayle Janzen 11232 Dayton Av N Seattle, WA 91833
