Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Carol Gold

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Aimee Young Hopkins

Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Patricia Tobias

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Maureen Sander

Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Andrea Simms

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Anna Christensen

Washington, DC 20555-0001

Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Erin Balint

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Kate Hyett

Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Daniel J Mardesich

Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Paul Kelly

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

John A Braitto

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Jesse Cougar

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Sandra Lee Beckley

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Tina M Colafranceschi

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Anita Stone

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Celli Parsons

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Melissa Houle

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Frances Shorrock

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Laurie Martin

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Kitus Inc

Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Trish Kelliher

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Stacey J Tafoya

Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.
