March 26, 1993

REPLY TO ATTENTION OF Preventive Medicine Consultants Division

US Nuclear Regulatory Commission Region I 475 Allendale King of Prussia, Pennsylvania 19406

Dear Sir:

Enclosed are two copies of a request to amend Byproduct Material License Number 08-01738-02, Walter Reed Army Medical Center, Washington, DC.

Recommend approval.

Sincerely,

Peter H. Myers Colonel, U.S. Army Radiological Hygiene Consultant

MEMORANDUM THRU

Commander, US Army Health Services Command, ATTN: HSCL-P, Fort 22 MAR 93 Sam Houston, TX 78234-6000

HQDA (SGPS-PSP-E), 5109 Leesburg Pike, Falls Church, VA 22041-3258

FOR US Nuclear Regulatory Commission, Region I, Nuclear Material Safety Section A, 475 Allendale Road, King of Prussia, PA 19406

SUBJECT: Amendment of US Nuclear Regulatory Commission License No. 08-01738-02

1. Request that NRC License No. 08-01738-02 for Walter Reed Army Medical Center (WRAMC) be amended to include an additional location where radioactive material will be used, Form NRC-313M, Item 1b (Enclosure 1). All existing procedures instituted by the Health Physics Office to ensure the safe handling of radioactive material in a laboratory environment will apply at this location.

2. Enclosed is a floor plan of the Gillette building (Enclosure 2), and a copy of part of the lease agreement between the US Government and MC-270, Inc. (Enclosure 3). At the current time two small research groups of less than ten people each are planning to use this facility for research involving radioactive material. They will be using only a few rooms per group, the remainder of the area will house administrative areas and research not involving radioactive material.

3. The isotope usage at this facility is currently planned to be H-3, C-14, Cr-51, Fe-59, I-125 RIA kits and Tc-99m. Less than 10 mCi of Cr-51, I-125 and Fe-59; 25 mCi of H-3, and C-14; and up to 100 mCi of Tc-99m are currently anticipated. No work with volatile iodine is currently planned. As always all rooms, isotopes, limits and protocols will be approved by the Health Physics Office and the WRAMC Radiation Control Committee prior to implementation.

HSHL-HP (385-11m) SUBJECT: Amendment of US Nuclear Regulatory Commission License No. 08-01738-02

4. If any additional information is required please contact Mr. David Burton at (301) 427-5161.

FOR THE COMMANDER:

QUICK, хох LTC, MS Executive Officer

PRIVACY ACT STATEMENT

Pursuant to 5 U.S.C. 552a(e)(3), enacted into law by section 3 of the Privacy Act of 1974 (Public Law 93-579), the following statement is furnished to individuals who supply information to the Nuclear Regulatory Commission on NRC Form 313M. This information is maintained in a system of records designated as NRC-3 and described at 40 Federal Register 45334 (October 1, 1975).

- 1. AUTHORITY Sections 81 and 161(b) of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2111 and 2201(b)).
- 2. PRINCIPAL PURPOSE(S) The information is evaluated by the NRC staff pursuant to the criteria set forth in 10 CFR Parts 30-36 to determine whether the application meets the requirements of the Atomic Energy Act of 1954, as amended, and the Commission's regulations, for the issuance of a radioactive material license or amendment thereof.
- 3. ROUTINE USES The information may be used: (a) to provide records to State health departments for their information and use; and (b) to provide information to Federal, State, and local health officials and other persons in the event of incident or exposure, for their information, investigation, and protection of the public health and safety. The information may also be disclosed to appropriate Federal, State, and local agencies in the event that the information indicates a violation or potential violation of law and in the course of an administrative or judicial proceeding. In addition, this information may be transferred to an appropriate Federal, State, or local agency to the extent relevant and necessary for a NRC decision or to an appropriate Federal agency to the extent relevant and necessary for that agency's decision about you. A copy of the license issued will routinely be placed in the NRC's Public Document Room, 1717 H Street, N.W., Washington, D.C.
- 4. WHETHER DISCLOSURE IS MANDATORY OR VOLUNTARY AND EFFECT ON INDIVIDUAL OF NOT PROVIDING INFORMATION Disclosure of the requested information is voluntary. If the requested information is not furnished, however, the application for radioactive material license, or amendment thereof, will not be processed.
- 5. SYSTEM MANAGER(S) AND ADDRESS Director, Division of Fuel Cycle and Material Safety, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

License No. 08-01738-02 Docket No. 030-01317 Control No. 118276

Department of the Army ATTN: DASG-PSP-E (COL Peter Myers) 5109 Leesburg Pike Falls Church, Virginia 22041-3258

Dear Colonel Myers:

Please find enclosed an amendment to your NRC Material License.

Please review the enclosed document carefully and be sure that you understand all conditions. If there are any errors or questions, please notify the Region I Material Licensing Section, (215) 337-5093, so that we can provide appropriate corrections and answers.

Please be advised that you must conduct your program involving licensed radioactive materials in accordance with the conditions of your NRC license, representations made in your license application, and NRC regulations. In particular, please note the items in the enclosed, "Requirements for Materials Licensees."

Since serious consequences to employees and the public can result from failure to comply with NRC requirements, the NRC expects licensees to pay meticulous attention to detail and to achieve the high standard of compliance which the NRC expects of its licensees.

You will be periodically inspected by NRC. A fee may be charged for inspections in accordance with 10 CFR Part 170. Failure to conduct your program safely and in accordance with NRC regulations, license conditions, and representations made in your license application and supplemental correspondence with NRC will result in prompt and vigorous enforcement action against you. This could include issuance of a notice of violation, or in case of serious violations, an imposition of a civil penalty or an order suspending, modifying or revoking your license as specified in the General Policy and Procedures for NRC Enforcement Actions, 10 CFR Part 2, Appendix C.

OFFICIAL RECORD COPY - G:\WPS\MLTR\L0801738.02 - 07/27/93

Attn: Mr. David Mann

Dear David,

Pursuant to our conversation today, I am enclosing material that I believe is necessary to decommission the Walter Reed space at 9620 Medical Center Drive. Walter Reed's control number is 118276.

I appreciate your assistance in this matter and would also appreciate if you would copy me on the final notification to Walter Reed.

I have enclosed my card should you need any further assistance from me.

Thank you for your expedition of this matter.

Sincerely,

James R. Burtnett Director of Human Resources

Encl

IN REPLY REFER TO:

August 16, 1993

Office of the Director

Mr. James R. Burtnett Human Genome Sciences, Inc. 9620 Medical Center Drive Rockville, Maryland 20850

Dear Mr. Burtnett:

The attached report and accompanying data are submitted for your review and use in obtaining an amendment to your radioactive material use license from the State of Maryland Department of the Environment. The radioactivity surveys performed by the Health Physics Office of the Walter Reed Army.Medical Center clearly show the space now being leased by the Walter Reed Army Institute of Research (WRAIR) is free of any residual radioactivity above background.

Request you notify this office in writing if your company is willing to accept responsibility for the space indicated in light of the survey data submitted. This action will allow the WRAIR to drop the Medical Center Drive Building from its license and you to add the facility to your license.

Point of Contact for this action is Dr. Billy G. Bass, (202) 576 3428 if you have any questions concerning this matter.

Sincerely,

st J. Salvado August J. Salvada

Colonel, U.S. Army Director

L 'ARTMENT OF THE ARMY WALTER REED ARMY MEDICAL CENTER WASHINGTON, DC 20307-5001

5 August 1993

MEMORANDUM FOR Director, Walter Reed Army Institute of Research, Washington, D.C.

SUBJECT: Decommissioning Survey for the Cellular Immunology Research Facility at Key West, Rockville, Maryland

1. References:

a. Title 10, Code of Federal Regulations, Part 20, Standards for Protection Against Radiation.

b. United States Nuclear Regulatory Commission Regulatory Guide 1.86, "Termination of Operating Licenses for Nuclear Reactors".

c. United States Nuclear Regulatory Commission Regulatory Guide 8.23, 1 January 1981, "Radiation Safety Surveys at Medical Institutions".

d. United States Nuclear Regulatory Commission, 1 July 1982, "Guidelines for Decontamination of Facilities and Equipment Prior to Release for Unrestricted Use or Termination of Licenses for Byproduct, Source, or Special Nuclear Material".

2. Purpose: During the time period of 14 June through 28 July 1993, Health Physics Office personnel conducted a decommissioning survey of the Cellular Immunology Research Facility (CIRF) at Key West to verify that residual radioactivity was below unrestricted levels.

3. Conclusion: Based upon the results of this comprehensive survey, there is no contamination in excess of unrestricted levels in the CIRF and it may be released, contingent upon NRC approval, to the owner.

4. Facility History: The Cellular Immunology Research Facility has been on Walter Reed's NRC License since 13 April 1990 as a site using byproduct material in biomedical research. At one time or another all 27 labs were active restricted areas. While 25 mCi of H-3, 10 mCi of C-14, 30 mCi of P-32, 45 mCi of S-35, 5 mCi of Cr-51, and 10.1 mCi of I-125 were authorized for use, not all radionuclides were used in each laboratory. HSHL-HP 5 August 1993 SUBJECT: Decommissioning Survey for the Cellular Immunology Research Facility at Key West, Rockville, Maryland

5. Methodology:

a. Survey Preparation. All licensed byproduct material was removed from the labs before commencing the survey. Contamination surveys were conducted on potentially contaminated equipment before returning the items to WRAIR. Additionally, all areas were cleared of equipment, furniture, and supplies before surveying.

b. Survey Strategy. Since the NRC had not, at the time of this survey, published a regulatory guide on how to conduct a decommissioning survey, we formulated the following approach:

(1) Areas that had been restricted areas received the most thorough surveying with measurements and wipes taken in 2 feet by 2 feet areas on all horizontal surfaces and to a height of 4 feet on all walls.

(2) The remaining unrestricted areas (offices, rest rooms, conference room, break areas, hallways, etc.) were surveyed to ensure a representative sampling.

(3) Wipes were taken in all sink drains, fume hood ducts, and exhaust ducts within the facility.

(4) Acceptable limits from NRC Regulatory Guide 8.23, Tables 2 and 3, were used for removable and fixed contamination, respectively.

(5) All areas were monitored for all possible contaminants regardless of the actual radionuclides used in specific labs.

c. Survey Technique.

(1) Direct Measurements of Fixed Contamination.

(a) Gamma Emitters. Gamma radiation was monitored with energy compensated G-M tubes measuring micro-R per hour at a distance of two inches above counter tops, shelves, drawers, and floors. Background was measured to be 15 uR/hr using this instrument.

(b) Beta Emitters. Beta radiation was monitored with a tungsten shielded G-M probe attached to a scaler. The Minimum Detectable Activity (MDA) for C-14 was 490 dpm/20 square cm using a one minute count time at a distance of one inch above counter tops, shelves, drawers, and floors.

2

HSHL-HP 5 August 1993 SUBJECT: Decommissioning Survey for the Cellular Immunology Research Facility at Key West, Rockville, Maryland

(2) Indirect Measurements of Removable Contamination.

(a) Swipes. Swipes were taken over an area of 300 square centimeters.

(b) Gamma Emitter Analysis. All swipes were first analyzed for gamma energy by a well counter with a sodium iodide detector. The MDA varied slightly from day to day, but it was consistently and substantially below 2,200 DPM/100 square cms for Cr-51 and 220 DPM/100 square cms for I-125.

(c) Beta Emitter Analysis. All swipes were analyzed for beta energy by a liquid scintillation counter. The MDA varied slightly from day to day, but it was consistently below 220 DPM/100 square cms for H-3, C-14, P-32, and S-35.

(3) Survey Quality Control.

(a) Survey Meters. The survey meters and scaler used were within calibration and had a battery and/or performance check prior to each use.

(b) Gamma Counter. The gamma well counters were routinely checked for constancy utilizing an I-129 source and for efficiencies utilizing Cr-51 and I-125 sources.

(c) Liquid Scintillation Counter. The LSCs performed self-quench corrections on each sample, and were routinely checked with H-3 and C-14 sources to ensure consistency.

6. Results. Included as enclosures are the results of the individual room and area surveys.

7. Recommendation. That the Walter Reed Army Institute of Research prepare for the return of the CIRF to its owner once the NRC sends their approval for releasing the facility.

8. POC for this survey is CPT Mark A. Melanson, Chief, Operations Branch, Health Physics Office, @ (301)-427-5104/5107.

ARTHUR G. SAMILJAN LTC, MS Chief, Health Physics Office

KEY WEST DECOMMISSIONING SURVEY

Office - 1

REMOVABLE CONTAMINATION

Office Number 1 was surveyed for removable contamination on 28 Jun 93 by SPC Brinley. A total of 38 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 28 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 5000 on 28 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 28 Jun 93 by SPC Brinley. The highest exposure rate found was 15.9 uR/hr. The average exposure rate was approximately 9 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 66 cpm. The average number of counts found during a one minute count-time was 30 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Office - 7

REMOVABLE CONTAMINATION

Office Number 7 was surveyed for removable contamination on 30 Jun 93 by SSG Koelker. A total of 70 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 30 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 30 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 30 Jun 93 by SSG Koelker. The highest exposure rate found was 19.4 uR/hr. The average exposure rate was approximately 11 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 61 cpm. The average number of counts found during a one minute count-time was 55 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

REMOVABLE CONTAMINATION

Office Number 8 was surveyed for removable contamination on 1 Jul 93 by SSG Koelker. A total of 113 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 1 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 1 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 1 Jul 93 by SSG Koelker. The highest exposure rate found was 13.6 uR/hr. The average exposure rate was approximately 12 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 64 cpm. The average number of counts found during a one minute count-time was 45 cpm. See Attachment 5 for the location of readings taken.

Office - 15

REMOVABLE CONTAMINATION

Office Number 15 was surveyed for removable contamination on 25 Jun 93 by SSG Webster. A total of 29 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 25 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 5000 on 25 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 25 Jun 93 by SSG Webster. The highest exposure rate found was 28.3 uR/hr. The average exposure rate was approximately 14 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 63 cpm. The average number of counts found during a one minute count-time was 32 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

Office - 16

REMOVABLE CONTAMINATION

Office Number 16 was surveyed for removable contamination on 2 Jul 93 by SSG Webster. A total of 25 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 6 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 6 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 2 Jul 93 by SSG Webster. The highest exposure rate found was 16.3 uR/hr. The average exposure rate was approximately 8 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 36 cpm. The average number of counts found during a one minute count-time was 34 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

Conference Room

REMOVABLE CONTAMINATION

The Conference Room was surveyed for removable contamination on 19 Jul by SPC Brinley. A total of 63 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 19 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 5000 on 19 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

Fixed gamma surveys were conducted on 19 Jul by SSG Webster. The highest exposure rate found was 27.6 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 70 cpm. The average number of counts found during a one minute count-time was approximately 50 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 9 Aug 93.

Reception Area

REMOVABLE CONTAMINATION

The Reception Area was surveyed for removable contamination on 17 Jul by SPC Brinley. A total of 56 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 17 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 17 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

Fixed gamma surveys were conducted on 17 Jul by SSG Webster. The highest exposure rate found was 23.0 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 52 cpm. The average number of counts found during a one minute count-time was approximately 40 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 9 Aug 93.

ROOM VENTS

REMOVABLE CONTAMINATION

On 19 JUL 93 the following room vents were surveyed by SFC Green. Rooms 31, 33, 35, 36, female and male latrines, and female and male changing rooms had 1 vent per room. Room 34 had 2 vents. 1 sample per vent was taken for a total of 10 samples.

The samples were analyzed for gamma contamination utilizing the LKB Gammawell Counter on 20 JUL 93. See Attachment 1 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The samples were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 20 JUL 93. See Attachment 2 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

ROOM VENTS

REMOVABLE CONTAMINATION

On 09 JUL 93 air vents in the following rooms were surveyed for removable contamination by SFC Green. Rooms 1, 2, 3, 4, 5, 6, 7, 9, 10, 11, 12, 13, 14, 15, 16, 18, 20, 21, 22, 24, 28, 29, 30, 44, and 46 had 1 vent each and 1 sample per vent. Rooms 8, and 23 had 2 vents per room and 1 sample per vent were taken. The total number of samples is 29.

The samples were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 09 JUL 93. See Attachment 1 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The samples were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 09 JUL 93. See Attachment 2 for MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

SINK AND SHOWER DRAINS

REMOVABLE CONTAMINATION

On 09 JUL 93 the following rooms with sinks were surveyed for removable contaimination from the sink drains by SSG Koelker. Rooms 9, 18, 19, 21, 23, and 24 for 1 sink per room. The female and male latrines for 2 sinks per room. The female and male changing rooms for 1 sink and 1 shower drain per room. There are 12 sink trap samples and 2 shower drain samples for a total of 14 samples taken this day.

The samples were analyzed for gamma contamination utilizing the LKB Gammawell Counter on 09 JUL 93. See attachment 1 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The samples were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 09 JUL 93. See attachment 2 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

KEY WEST DECOMMISSIONING SURVEY

Sharps/Electrical Closets

REMOVABLE CONTAMINATION

The sharps and electrical closets were surveyed for removable contamination on 29 Jun 93 by SPC Brinley. A total of 49 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 29 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 5000 on 29 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

Fixed gamma surveys were conducted on 29 Jun 93 by SPC Brinley. The highest exposure rate found was 18.9 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 70 cpm. The average number of counts found during a one minute count-time was approximately 45 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 9 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Female Changing Room & elevator

REMOVABLE CONTAMINATION

The female changing room and elevator were surveyed for removable contamination on 14 Jul by SPC Brinley. A total of 100 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 14 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 5000 on 14 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

Fixed gamma surveys were conducted on 14 Jul by SPC Brinley. The highest exposure rate found was 14.6 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 115 cpm. The average number of counts found during a one minute count-time was approximately 80 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 9 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Hallway - 5

REMOVABLE CONTAMINATION

Hallway Number 5 was surveyed for removable contamination on 16 Jul 93 by SPC Brinley. A total of 120 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 16 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 16 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 16 Jul 93 by SPC Brinley. The highest exposure rate found was 19.2 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 94 cpm. The average number of counts found during a one minute count-time was 45 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 9 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Hallway - 10

REMOVABLE CONTAMINATION

Hallway Number 10 and Closet were surveyed for removable contamination on 14 Jul and 17 Jun 93(respectively) by SPC Brinley. A total of 44 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 17 Jun and 14 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 17 Jun and 14 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

Fixed gamma surveys were conducted on 14 Jul 93 by SPC Brinley. The highest exposure rate found was 18.4 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 89 cpm. The average number of counts found during a one minute count-time was 60 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 9 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Hallway - 11

REMOVABLE CONTAMINATION

Hallway Number 11 was surveyed for removable contamination on 2 Jul 93 by SPC Brinley. A total of 90 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 2 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 2 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

Fixed gamma surveys were conducted on 2 Jul 93 by SPC Brinley. The highest exposure rate found was 24.4 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 48 cpm. The average number of counts found during a one minute count-time was 32 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 9 Aug 93.

Laboratory - 18

REMOVABLE CONTAMINATION

Laboratory Number 18 was surveyed for removable contamination on 16 Jun 93 by SSG Webster. A total of 141 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 16 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 16 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 16 Jun 93 by SPC Brinley. The highest exposure rate found was 22.0 uR/hr. The average exposure rate was approximately 11 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 23 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 102 cpm. The average number of counts found during a one minute count-time was 55 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

Laboratory - 20

REMOVABLE CONTAMINATION

Laboratory Number 20 was surveyed for removable contamination on 22 Jun 93 by SSG Webster. The walk-in refer adjoining it was surveyed on 25 Jul by SPC Brinley. A total of 76 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 22 Jun 93. See Attachment 2 for the MDAs and associated efficiencies for the 22 Jun survey. Laboratory analysis for the 25 Jul survey was conducted by the Technical Services Branch, HPO, rather than on-site. The Quality Assurance records for Technical Services is available for inspection at all times. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 22 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. Technical Services Branch also provided the analysis for the beta contamination for the 25 Jul survey. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 22 Jun 93 by SPC Brinley. The highest exposure rate found was 20.7 uR/hr. The average exposure rate was approximately 9.4 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 23 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 64 cpm. The average number of counts found during a one minute count-time was 50 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Laboratory - 23

REMOVABLE CONTAMINATION

Laboratory Number 23 was surveyed for removable contamination on 28 Jun by SPC Brinley. A total of 124 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 28 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 5000 on 28 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. Initial analysis indicated that 6 of the swipes were contaminated. These samples were re-counted and indicated no contamination. It was later discovered that the rubber seal on the sample elevator of the LSC had come off, and that the initial erroneous counts were due to the resulting light leak. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 28 Jun by SPC Brinley. The highest exposure rate found was 17.0 uR/hr. The average exposure rate was approximately 9 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 23 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 86 cpm. The average number of counts found during a one minute count-time was approximately 50 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Hallway - 7

REMOVABLE CONTAMINATION

Hallway Number 7 was surveyed for removable contamination on 14 Jul 93 by SPC Brinley. A total of 93 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 14 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 14 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 14 Jul 93 by SSG Webster. The highest exposure rate found was 18.3 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 88 cpm. The average number of counts found during a one minute count-time was 40 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 9 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Hallway - 8

REMOVABLE CONTAMINATION

Hallway Number 8 was surveyed for removable contamination on 21 Jun (South end) and 30 Jun (North end) 93 by SPC Brinley. A total of 118 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 21 and 30 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 21 and 30 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

1.1

A fixed gamma survey was conducted on 21 and 30 Jun 93 by SPC Brinley. The highest exposure rate found was 30.7 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 79 cpm. The average number of counts found during a one minute count-time was 40 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 9 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Hallway - 9

REMOVABLE CONTAMINATION

Hallway Number 9 was surveyed for removable contamination on 30 Jun (South end) and 2 Jul (Mid Section) and 6 Jul (North end) 93 by SPC Brinley. A total of 152 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 30 Jun, 2 and 6 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 30 Jun, 2 and 6 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

Fixed gamma surveys were conducted on 30 Jun, 2 and 6 Jul 93 by SSGs Webster and Koelker. The highest exposure rate found was 28.4 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 67 cpm. The average number of counts found during a one minute count-time was 45 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 9 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Hallway - 10

REMOVABLE CONTAMINATION

Hallway Number 10 and Closet were surveyed for removable contamination on 14 Jul and 17 Jun 93(respectively) by SPC Brinley. A total of 44 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 17 Jun and 14 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 17 Jun and 14 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

Fixed gamma surveys were conducted on 14 Jul 93 by SPC Brinley. The highest exposure rate found was 18.4 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 26 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 89 cpm. The average number of counts found during a one minute count-time was 60 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 9 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Laboratory - 18

REMOVABLE CONTAMINATION

Laboratory Number 18 was surveyed for removable contamination on 16 Jun 93 by SSG Webster. A total of 141 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 16 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 16 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 16 Jun 93 by SPC Brinley. The highest exposure rate found was 22.0 uR/hr. The average exposure rate was approximately 11 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 23 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 102 cpm. The average number of counts found during a one minute count-time was 55 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Laboratory - 19

REMOVABLE CONTAMINATION

Laboratory Number 19 was surveyed for removable contamination on 23 Jun 93 by SPC Brinley. A total of 205 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 23 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 23 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 23 Jun 93 by SPC Brinley. The highest exposure rate found was 26.1 uR/hr. The average exposure rate was approximately 10.5 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 23 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 119 cpm. The average number of counts found during a one minute count-time was 60 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Laboratory - 20

REMOVABLE CONTAMINATION

Laboratory Number 20 was surveyed for removable contamination on 22 Jun 93 by SSG Webster. The walk-in refer adjoining it was surveyed on 25 Jul by SPC Brinley. A total of 76 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 22 Jun 93. See Attachment 2 for the MDAs and associated efficiencies for the 22 Jun survey. Laboratory analysis for the 25 Jul survey was conducted by the Technical Services Branch, HPO, rather than on-site. The Quality Assurance records for Technical Services is available for inspection at all times. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 22 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. Technical Services Branch also provided the analysis for the beta contamination for the 25 Jul survey. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 22 Jun 93 by SPC Brinley. The highest exposure rate found was 20.7 uR/hr. The average exposure rate was approximately 9.4 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 23 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 64 cpm. The average number of counts found during a one minute count-time was 50 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

REMOVABLE CONTAMINATION

Laboratory Number 21 was surveyed for removable contamination on 30 Jun 93 by SPC Brinley. A total of 105 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 30 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 30 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 30 Jun 93 by SPC Brinley. The highest exposure rate found was 22.2 uR/hr. The average exposure rate was approximately 9 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 23 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 169 cpm. The average number of counts found during a one minute count-time was approximately 80 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

Laboratory - 22

REMOVABLE CONTAMINATION

Laboratory Number 22 was surveyed for removable contamination on 9 Jul by SSG Koelker. A total of 149 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 12 Jul 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 6800 on 12 Jul 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 9 Jul by SSG Koelker. The highest exposure rate found was 20.1 uR/hr. The average exposure rate was approximately 8 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 23 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 87 cpm. The average number of counts found during a one minute count-time was approximately 50 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

KEY WEST DECOMMISSIONING SURVEY

Laboratory - 23

REMOVABLE CONTAMINATION

Laboratory Number 23 was surveyed for removable contamination on 28 Jun by SPC Brinley. A total of 124 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 28 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 5000 on 28 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. Initial analysis indicated that 6 of the swipes were contaminated. These samples were re-counted and indicated no contamination. It was later discovered that the rubber seal on the sample elevator of the LSC had come off, and that the initial erroneous counts were due to the resulting light leak. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 28 Jun by SPC Brinley. The highest exposure rate found was 17.0 uR/hr. The average exposure rate was approximately 9 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 23 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 86 cpm. The average number of counts found during a one minute count-time was approximately 50 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

Laboratory - 24

REMOVABLE CONTAMINATION

Laboratory Number 24 was surveyed for removable contamination on 24 Jun by SPC Brinley. A total of 195 swipes were taken. See Attachment 1 for the location of each swipe.

The swipes were analyzed for gamma contamination, utilizing the LKB Gammawell Counter on 24 Jun 93. See Attachment 2 for the MDAs and associated efficiencies. No gamma contamination was found above 200 dpm for I-125 or above 2000 dpm for any other isotope.

The swipes were analyzed for beta contamination, utilizing the Beckman Liquid Scintillation Counter Model 5000 on 24 Jun 93. See Attachment 3 for the MDAs and associated efficiencies. No beta contamination was found above 200 dpm for any isotope.

FIXED CONTAMINATION

A fixed gamma survey was conducted on 24 Jun by SPC Brinley. The highest exposure rate found was 21.3 uR/hr. The average exposure rate was approximately 12 uR/hr. See Attachment 4 for the location of readings taken.

A fixed beta survey was conducted on 23 Jul 93 by SPC Brinley. The highest number of counts found during a one minute count-time was 152 cpm. The average number of counts found during a one minute count-time was approximately 60 cpm. See Attachment 5 for the location of readings taken.

As well as being reviewed at the time of the survey/receipt of laboratory results, all pertinent survey data was reviewed and compiled here by SFC Green on 8 Aug 93.

License No. 08-01738-02 Docket No. 030-01317 Control No. 119389

Department of the Army ATTN: Peter H. Myers, Lt. Colonel HQDA (DASG-PSP) 5109 Leesburg Pike Falls Church, Virgina 22041-3258

Dear Lt. Colonel:

Please review the enclosed document carefully and be sure that you understand all conditions. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region I office, the Licensing Assistance Section, (610) 337-5093 or 5239, so that we can provide appropriate corrections and answers.

Please be advised that your license expires at the end of the day, in the month, and year stated in the license. Until your license is terminated, you must conduct your program involving byproduct materials in accordance with the conditions of your NRC license, representations made in your license application, and NRC regulations. In particular, note that you must:

1. Operate in accordance with NRC regulations 10 CFR Part 19, "Notices, Instructions and Reports to Workers; Inspections," 10 CFR Part 20, "Standards for Protection Against Radiation," and other applicable regulations.

2. Notify NRC, in writing, within 30 days:

- a. when the licensee's mailing address changes (no fee is required if the location of byproduct material remains the same).
- 3. In accordance with 10 CFR 30.36(b) and/or license condition, notify NRC, promptly, in writing, and request termination of the license:
 - a. when you decide to terminate all activities involving materials authorized under the license; or

OFFICIAL RECORD COPY - G:\WPS\MLTR\L0801738.02 - 04/07/94

ML 10

Department of the Army

- b. if you decide not to complete the facility, acquire equipment, or possess and use authorized material.
- 4. Request and obtain a license amendment before you:
 - a. change Radiation Safety Officers;
 - b. order byproduct material in excess of the amount, or radionuclide, or form different than authorized on the license;
 - c. add or change the areas of use, or address or addresses of use identified in the license application or on the license; or
 - d. change ownership of your organization.
- 5. Submit a complete renewal application with proper fee or termination request at least 30 days before the expiration date of your license. You will receive a reminder notice approximately 90 days before the expiration date. Possession of byproduct material after your license expires is a violation of NRC regulations. A license will not normally be renewed, except on a case-by-case basis, in instances where licensed material has never been possessed or used.

In addition, please note that NRC Form 313 requires the applicant, by his/her signature, to verify that the applicant understands that all statements contained in the application are true and correct to the best of the applicant's knowledge. The signatory for the application should be the licensee or certifying official rather than a consultant.

You will be periodically inspected by the NRC. Failure to conduct your program in accordance with NRC regulations, license conditions, and representations made in your license application and supplemental correspondence with NRC will result in enforcement action against you. This could include issuance of a notice of violation, or imposition of a civil penalty, or an order suspending, modifying or revoking your license as specified in the General Policy and Procedures for NRC Enforcement Actions, 10 CFR Part 2, Appendix C.

OFFICIAL RECORD COPY - G:\WPS\MLTR\L0801738.02 - 04/07/94

Department of the Army

-3-

Since serious consequences to employees and the public can result from failure to comply with NRC requirements, prompt and vigorous enforcement action will be taken when dealing with licensees who do not achieve the necessary meticulous attention to detail and the high standard of compliance which NRC expects of its licensees.

Thank you for your cooperation.

Sincerely,

Original organd By: Thomas K. Thompson

Thomas K. Thompson Senior Health Physicist Nuclear Materials Safety Branch Division of Radiation Safety and Safeguards

Preventive Medicine Consultants Division

US Nuclear Regulatory Commission Region I 475 Allendale King of Prussia, Pennsylvania 19406

Dear Sir:

Enclosed are two copies of a request to amend Byproduct Material License Number 08-01738-02, Walter Reed Army Medical Center, Washington, DC, by appointing Captain Mark A. Melanson as Radiation Safety Officer.

Recommend approval.

Sincerely,

Peter H. Myers Colonel, U.S. Army Radiological Hygiene Consultant

Enclosure.

MEMORANDUM FOR U.S. Nuclear Regulatory Commission, Region I, Nuclear Material Safety Section A, 475 Allendale Road, King of Prussia, PA 19406

SUBJECT: Amendment of U.S. Nuclear Regulatory Commission License No. 08-01738-02.

1. Request that NRC License No. 08-01738-02 for Walter Reed Army Medical Center be amended to reflect a change in the Radiation Safety Officer from LTC Arthur G. Samiljan to CPT Mark A. Melanson, CHP. CPT Melanson has been assigned as the Chief, Health Physics Office at Walter Reed AMC since February 1994. Before that he was the Chief, Operations Branch of the Health Physics Office and alternate RSO at WRAMC since June 1991. A Training and Experience Form and a Curriculum Vitae for CPT Melanson are attached (Enclosures 1 and 2).

2. If any additional information is required please contact Mr. David Burton or CPT Melanson at (301) 427-5161.

JUN 1 4 1994

License No. 08-01738-02 Docket No. 030-01317 Control No. 117725

Department of the Army ATTN: DASG-PSP-E(COL Peter Myers) 5109 Leesburg Pike Washington, DC 20307-5001

Dear Colonel Myers:

Please review the enclosed document carefully and be sure that you understand all conditions. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region I office, the Licensing Assistance Section, (610) 337-5093 or 5239, so that we can provide appropriate corrections and answers.

Please be advised that your license expires at the end of the day, in the month, and year stated in the license. Until your license is terminated, you must conduct your program involving byproduct materials in accordance with the conditions of your NRC license, representations made in your license application, and NRC regulations. In particular, note that you must:

- Operate in accordance with NRC regulations 10 CFR Part 19, "Notices, Instructions and Reports to Workers; Inspections," 10 CFR Part 20, "Standards for Protection Against Radiation," 10 CFR Part 35, "Medical Use of Byproduct Material," and other applicable regulations.
- 2. Notify NRC, in writing, within 30 days:
 - a. when an authorized user, Radiation Safety Officer, Teletherapy Physicist, or Medical Physicist permanently discontinues performance of duties under the license or has a name change; or
 - b. when the licensee's mailing address changes (no fee is required if the location of byproduct material remains the same).
- 3. In accordance with 10 CFR 30.36(b) and/or license condition, notify NRC, promptly, in writing, and request termination of the license when you decide to terminate all activities involving materials authorized under the license.
- 4. In accordance with 10 CFR 35.13, request and obtain a license amendment before you:
 - a. receive or use byproduct material for a clinical procedure permitted under Part 35 but not permitted by your license issued pursuant to this Part;
 - b. permit anyone, except a visiting authorized user described in 10 CFR 35.27, to work as an authorized user under the license;

OFFICIAL RECORD COPY - G:\WPS\MLTR\L0801738.02 - 06/14/94

Department of the Army

- change Radiation Safety Officers, Teletherapy Physicists or Medical с. Physicists:
- d. order byproduct material in excess of the amount, or radionuclide, or form different than authorized on the license:
- add or change the areas of use, or address or addresses of use e. identified in the license application or on the license.
- 5. Receive written approval from the NRC prior to any change ownership of your organization in accordance with 10 CFR 30.34(b).
- 6. Submit a complete renewal application with proper fee or termination request at least 30 days before the expiration date of your license. You will receive a reminder notice approximately 90 days before the expiration date. Possession of byproduct material after your license expires is a violation of NRC regulations. A license will not normally be renewed, except on a case-by-case basis, in instances where licensed material has never been possessed or used.

In addition, please note that NRC Form 313 requires the applicant, by his/her signature, to verify that the applicant understands that all statements contained in the application are true and correct to the best of the applicant's knowledge. The signatory for the application should be the licensee or certifying official rather than a consultant.

You will be periodically inspected by the NRC. Failure to conduct your program in accordance with NRC regulations, license conditions, and representations made in your license application and supplemental correspondence with NRC will result in enforcement action against you. This could include issuance of a notice of violation, or imposition of a civil penalty, or an order suspending, modifying or revoking your license as specified in the General Policy and Procedures for NRC Enforcement Actions, 10 CFR Part 2, Appendix C.

Since serious consequences to employees and the public can result from failure to comply with NRC requirements, prompt and vigorous enforcement actions will be taken when dealing with licensees who do not achieve the necessary meticulous attention to detail and the high standard of compliance which NRC expects of its licensees.

Thank you for your cooperation.

Sincerely,

Original Signed By: Thomas K. Thompson

REPLY TO ATTENTION OF:

June 2, 1994

Health Physics Office

SUBJECT: Additional Information for Review of Renewal of U.S. Nuclear Regulatory Commission License No. 08-01738-02, mail control No. 117725

Nuclear Materials Safety Branch Division of Radiation Safety and Safeguards ATTENTION: Mr. Thomas K. Thompson U.S. Nuclear Regulatory Commission, Region I 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Removed

Dear Mr. Thompson:

In response to our phone conversation of May 25, 1994, pertaining to the renewal of License No. 08-01738-02, Control No. 117725, the following additional information is provided:

1. A memorandum dated 13 May 1994, was forwarded through Army channels requesting that NRC License No. 08-01738-02 and NRC License No. 08-01738-03 be amended to approve myself as the Radiation Safety Officer on both licenses. Headquarters, Department of the Army, Office of the Surgeon General, Falls Church, VA, forwarded the request to the NRC, Region I, per memorandum dated June 1, 1994. The memorandums with enclosures are provided as you requested as enclosure 1.

2. We have reviewed the provisions of 10 CFR 30.32(i). The limits for all conditions of 10 CFR 30.72, Schedule C have been reviewed, and under the current and requested license limits we do not exceed any specific activity limits. In addition, the sum of our license limits for any isotope divided by the Schedule C appropriate activity limit does not exceed 1. This would indicate that our license is exempt from the provisions of 10 CFR 30.32(i). This calculation will remain on file at the Health Physics Office.

3. The Nuclear Medicine Service has revised the Quality Management Program (QMP), and the revised QMP from the Nuclear Medicine Service dated March 22, 1994, is provided as enclosure 2. The Radiation Oncology Service QMP dealing with brachytherapy was extracted from the Radiation Oncology Service Policy and Procedure Manual and is provided as enclosure 3.

4. During our phone conversation on May 25, 1994, you indicated a new NRC policy precluded issuing a blanket statement

(T))

CARTICIAL RECORD COPY

117725 JUN - 6 1994 for the decay-in-storage of any radioisotope with a half-life of less than 90 days, as is currently listed as Condition 18 of our license. As requested we submit the following information to support the decay-in-storage of radioactive material:

a. In addition to authorization to hold radioactive material with a half-life of less than 65 days for decay-instorage before disposal in ordinary trash, we request approval for decay-in-storage for the following radioactive materials: cobalt-58, iridium-192, sulfur-35, and scandium-46. These radioactive materials all have half-life of greater than 65 days, but less than 90 days, and are currently authorized on our license for decay-in-storage.

b. Justification for decay-in-storage. This request will support reducing the volume of low level radioactive waste, which at some point in the future must be disposed of as low level radioactive waste. Sulfur-35, cobalt-58, iridium-192, and scandium-46, account for a significant volume of the low level radioactive waste generated at this facility. Allowing decay-instorage, and then disposing of this waste after proper monitoring in ordinary trash would significantly reduce our volume of low level radioactive waste. With the unavailability of any low level radioactive waste site, all waste classified as radioactive waste must be stored on-site. Allowing us to decay the waste to background levels frees up space to accommodate radioactive waste that must be stored until the Pennsylvania low level radioactive waste site is operational. It will also significantly reduce the future costs incurred to dispose of low level radioactive material at Walter Reed Army Medical Center. As you know, the date that the Pennsylvania site will open is uncertain. Decayin-storage of this waste will insure that we have sufficient space to hold radioactive waste prior to the opening of the Pennsylvania low level burial grounds. This request supports the mandates of Congress, the States, and U.S. Army policy to minimize the volume of low level radioactive waste generated, while adhering to strict safety standards that protect the general population and the environment.

I hope you will find the above information sufficient to complete your processing of our application. Any additional questions or comments pertaining the renewal of our license should be directed to the undersigned at (301) 427-5161.

TEACHING EXPERIENCE:

1990-1993, Assistant Professor of Preventive Medicine and Biometrics, Uniformed Services University of the Health Sciences, Bethesda, MD.

1977-1979, Instructor, Radiological Physics, Academy of Health Sciences, Ft. Sam Houston, TX.

1977-1979, Assistant Professor of Health Sciences, Baylor University at San Antonio, San Antonio, TX.

1969-1970, High School Teacher (Mathematics), Grant Community High School, Fox Lake, IL.

PROFESSIONAL EXPERIENCE:

1. June 1992 to May 1994, Chief, Health Physics Division, U.S. Army Environmental Hygiene Agency, Aberdeen Proving Ground, MD.

Duties: Leads and manages the Health Physics Division composed of the Medical Health Physics Branch, the Industrial Health Physics Branch and an Administrative Section. Directs the activities of

2

some 25 professional health physicists in world wide mission of support of U.S. Army Radiation Protection Programs. Support includes complete radiation protection program evaluations for compliance with Federal, Army, and Nuclear Regulatory Commission (NRC) Licenses for Medical and Industrial facilities, medical and industrial x-ray surveys, radiation dose assessments from bioassay data, assistance in preparation of documents to terminate NRC licenses, and conducting verification surveys for NRC License termination. Radiation protection policies are developed for the Army Surgeon General for implementation Army wide. Act as principle user of radioactive materials, supervisor of ¹³⁷Cs irradiator for calibration, and member of the Radiation Control Committee.

2. June 1989 to June 1992, Deputy Director, Environmental Health and Occupational Safety; Chief, Radiation Safety and Radiation Protection Officer, Uniformed Service University of the Health Sciences (USUHS), Bethesda, MD.

Responsible for the supervision and management of Duties: broad scope US Nuclear Regulatory Byproduct Materials License No. 19-23344-01. Supervises health physics personnel in the performance of laboratory radiation protection surveys, personnel dosimetry program, laboratory analysis, and radioactive material control. Provides technical advice to some 350 radiation workers working in about 150 radioisotope laboratories. Teaches in various graduate level courses in Preventive Medicine and Radiology. Provides technical consultation to Director and other Branch Chiefs. Acts as the Director when the Director is absent. Has been designated the Medical Physics Consultant on acquisition and acceptance testing of Computerized Tomography (CT) Systems and Magnetic Resonance Imaging (MRI) Systems for the Army Surgeon General. This CT and MRI mission is world wide.

3. June 1983-June 1989, Chief, Health Physics, Dwight D. Eisenhower Army Medical Center, Ft. Gordon, GA.

Served as Chief, Health Physics, and Radiation Duties: Protection Officer. Responsible for supervision and management of broad scope radiation protection program including management of US Nuclear Regulatory Byproduct Materials License No. 10-12044-03 and Department of Army Radioactive Materials Authorization No. 10-07-Served as Regional Consultant to DOD Health Region 10, which 81. includes 9 Army Community Hospitals, and clinics in Panama and Puerto Rico. Performs Technical Surveys of radioactive materials and radiation producing devices to evaluate health hazards and performs medical physics evaluations to optimize imaging. Provides education support to professional staff. Supervises the personnel dosimetry program and performs dosimetry analysis of both radiation workers and patients. Is the Medical Physics Consultant on acquisition and acceptance testing of Computerized Tomography (CT)

3-

Systems and Magnetic Resonance Imaging (MRI) Systems for the Army Surgeon General. This CT and MRI mission is world wide.

4. September 1976 - June 1980, Chief, X-Ray Branch, Academy of Health Sciences, Ft. Sam Houston, TX.

Duties: Programs, plans and supervises overall operation of branch, including performance of 36 instructors and about 430 students annually. Branch is responsible for teaching the x-ray technologist program (radiographic) for the US Army. Also coordinates, plans, and supervises clinical training. Serves as Chairman of X-Ray Specialist Curriculum Committee, and Chairman of Medicine and Surgery Division Physics and Biophysics Committee. Serves as subject matter expert in radiology for Combat Development and Health Care Systems.

5. January 1975 - July 1975, Chief, Health Physics Branch, US Army Environmental Hygiene Agency Regional Activity South, Ft. Sam Houston, TX.

Duties: Conducts radiation protection surveys of US Army installations containing or generating ionizing radiation. Geographical area of support is all states west of the Mississippi River. Also reviews NRC license and DA Authorization applications. Performs technical consultation on radiation safety hazards.

6. March 1974 - December 1974, Chief, Department of Nuclear Medical Sciences, US Army Medical Laboratory, Ft. Sam Houston, TX.

Duties: Supervises laboratory procedures and techniques of radiation biology, radiochemistry, and biophysics for regional reference laboratory. Geographic area of support includes United States, Pacific Region, Korea, and Panama. Supervises radiation detection measurements, preparation and analysis of radioisotopes in support of diagnostic and other clinical procedures. Provides support on environmental surveillance. Advises on radiological hygiene matters to prevent unnecessary exposure of personnel to ionizing radiation. Performs duty of Chairman, Radioisotope Committee, and Radiological Protection Officer. Manages all aspects of AEC License No. 42-06316-01, and Department of Army Authorization for Radioactive Materials. Performs Health Physics surveys and overall monitoring of all Laboratory Departments engaged in work involving radioactive material.

7. January 1973 - February 1974, Survey Officer, Health Physics Division, US Army Environmental Hygiene Agency, Aberdeen Proving Ground, MD.

Duties: Reviews AEC license and Department of Army Authorizations applications as well as drafts Army directives and technical publications pertaining to radiological health; evaluates proposed

-4

in-system items containing or generating ionizing radiation; makes on-site surveys of Army diagnostic, industrial, and therapeutic xray facilities, radioactive sources, accelerators, human use of radioisotopes and other sources of ionizing radiation; prepares reports with recommendations for corrective action; assists in training activities. Performs as Alternate Radiological Protection Officer. This requires preparation and maintenance of records and reports on receipt, issue, use, inventory, storage, and disposal of radioactive materials. Performs health physics surveys of all agency divisions engaged in working with radioactive materials.

8. September 1972 - October 1972, Health Physics Technician, SM1 Nuclear Power Plant, Ft. Belvoir, VA.

Duties: Conducts radiological surveys, performs treatment to maintain proper process fluid conditions of nuclear power plant. Operates nuclear power plant controls and equipment. Assists in refueling operations and preparing spent fuel elements and demineralizers for storage and shipment. Monitors process fluids for radioactivity and performs chemical separations. Conducts radiological surveys of nuclear power plant personnel, equipment, work areas and reactor elements.

MEMBERSHIPS, PAPERS, PRESENTATIONS AND AWARDS:

Member, Health Physics Society (1973) Member, Eta Chapter, Delta Omega Society (1977)

TELEPHONE CONVERSATON RECORD	Date: May 24, 1994	Time: 10:43
Mail Control No.: // 77 25	License No.: 08-01738-02	Docket No.:
Person Called: Lt. Colonel William B. Johnson	Organization: Walter Reed Army Med. Ctr.	Telephone Number: 412 427-5104

Person Calling: Thomas K. Thompson

Subject: Some additional questions.

Summary: Discussed with Colonel Johnson that I became aware that he desires to be named as RSO and that I need clarification on a few issues as follows:

a) Please submitt the your credentials for RSO.

b) Please identify and justify your need for decaying isotopes of > then 65 day half-life. c) Although you have not requested any specific byproduct material that would require an emergency plan the sum of ratios could put you over the values which do not require such a plan. Do you intend to limit the possession of byproduct materials to stay under the requirement for a plan or will you submit a plan?

d) A preliminary check of your QM plan indicates you have not addressed sealed source therapy or radiopharmaceutical therapy other than I-131.

Please provide this information.

REPLY TO ATTENTION OF:

February 15, 1994

Health Physics Office

SUBJECT: Additional Information for Review of U.S. Nuclear Regulatory Commission License No. 08-01738-02, Mail Control No. 117725

Nuclear Materials Safety Branch Division of Radiation Safety and Safeguards ATTENTION: Mr. Thomas K. Thompson U.S. Nuclear Regulatory Commission, Region I 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Dear Mr. Thompson:

In reviewing our licensing correspondence with your office I noticed an error concerning the survey criteria that we forwarded to your office in a memo dated 9 September 1993. In that correspondence we indicated that the health physics staff would conduct weekly surveys for users handling 200 uCi or more and monthly surveys for all other areas. That is incorrect.

We propose the following revision:

(1) Areas using 200 uCi or more will still receive weekly surveys from the Health Physics Office.

(2) Areas using less than 200 uCi but more than 10 percent of the values in 10 CFR Part 20, Appendix C will receive monthly surveys by the health physics staff and daily surveys by the user each day of use.

(3) Areas using less than 10 percent of the values in 10 CFR Part 20, Appendix C will receive quarterly surveys by the health physics staff and we will not require users to conduct daily surveys.

We feel that these criteria will ensure an adequate level of safety while avoiding onerous requirements on the part of our researchers. I hope you will find the above information sufficient to complete your processing of our application. Please feel free to contact me @ (301)-427-5104/5107 if you any questions.

December 9, 1993

Health Physics Office

SUBJECT: Additional Information for Review of Renewal of U.S. Nuclear Regulatory Commission License No. 08-01738-02, mail control No. 117725

Nuclear Materials Safety Branch Division of Radiation Safety and Safeguards ATTENTION: Mr. Thomas K. Thompson U.S. Nuclear Regulatory Commission, Region I 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Dear Mr. Thompson:

In response to your letter of November 30, 1993, pertaining to the renewal of License No. 08-0738-02, Control No. 117725, the following additional information is provided:

1. In addition to the audit elements described in our October 29, 1993 letter, independent room surveys are performed as described in paragraph 1, September 29, 1993 letter. Elements of these surveys include checking for posting of required documents, observing work habits of and discussion with technicians and users to ensure the general rules for the safe use of radioactive material are being followed, compliance with NRC and Army regulations and to evaluate training effectiveness. A written survey report listing deficiencies, recommended corrective actions, and/or helpful suggestions is provided the user.

2. Paragraph 3.a.(3) of the model ALARA program will be retained.

I hope you will find the above information sufficient to complete your processing of our application.

ARTHUR/G. SAMILJAN Lieutenant Colonel, U.S. Army Chief, Health Physics Office

OFFERICIAL BECORD CONTY ML D

NOV 3 0 1993

License No. 08-01738-02 Docket No. 030-01317 Control No. 117725

Department of the Army Walter Reed Army Medical Center ATTN: Major General Ronald R. Blanck Commanding Officer Washington, DC 20307-5001

Dear Major General Blanck:

2.

This is in reference to your application dated January 21, 1993 and your letter dated October 29, 1993 to renew License No. 08-01738-02. In order to continue our review, we need the following additional information:

1. The documentation you have provided on your radiation safety audits indicates that activities and work areas are reviewed in order to determine compliance with procedures possession limits, record keeping and posting. Your procedure appears to be weak in that your audits are announced and that most of the emphasis is on record keeping, posting and other administrative matters. In our September 1993 letter Items 3.(b. through d.) have not been addressed entirely in your submittal. You should provide additional information that demonstrates your audits cover more than record and inventory compliance, that audits will be unannounced reviews of radiation workers safety practices.

You have indicated that you want to delete paragraph 3.a.(3) from your proposed ALARA program. We do not recommend that you delete the quarterly audits of radiation surveys that are to be reported to the Radiation Safety Committee by the Radiation Safety Officer. This is a useful feature of the ALARA program and should be included. Please confirm you will retain such audits.

SUBJECT: Additional Information for Review of Renewal of U.S. Nuclear Regulatory Commission License No. 08-01738-02, mail control No. 117725

Nuclear Materials Safety Branch Division of Radiation Safety and Safeguards ATTENTION: Mr. Thomas K. Thompson U.S. Nuclear Regulatory Commission, Region I 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Dear Mr. Thompson:

In response to your letter of September 29, 1993, pertaining to the renewal of License No. 08-0738-02, Control No. 117725, the following additional information is provided:

1. The minimum requested information that is required of proposed users is detailed on the enclosed authorization application forms. (Enclosures 1-3)

2. The information indicated in Information Notice 90-09, Attachment 1 is provided at enclosure 4.

3. The minimum elements of our authorization audits are detailed in the Health Physics Office Standing Operating Procedure 1-26. (Enclosure 5) Performance of independent surveys was addressed in paragraph 1 of our September 9, 1993 letter.

4. The minimum information recorded for radiation safety training is date training was given, place, instructor, and names of attendees. The groups of workers who will receive training are listed at ATT 8.1 of original application.

5. Please change Item 10.2 of original application to read "We will establish and implement the model ALARA program in Appendix G to Regulatory Guide 10.8, Revision 2 except that paragraph 3.a.(3) is deleted".

6. Please change Item 10.5 of original application to read "We will establish and implement the model spill procedures in Appendix J to Regulatory Guide 10.8, Revision 2 except that the Alternate RSO will follow up on the cleanup of the spill and will attach an Incident Memorandum to the Contamination Survey.

OFFICIAL RECORD COPY ML 10

117725 NOV 0 8 1993 I hope you will find the above information sufficient to complete your processing of our application.

INSTRUCTIONS FOR PREPARATION OF APPLICATION FOR AUTHORIZATION TO USE RADIOACTIVE MATERIAL (NON-HUMAN USE)

Encl

WRAMC FORM 1662R (FEBRUARY 1979)

GENERAL INFORMATION

 An applicant for an "Authorization to Use Radioactive Moterial (Non-Human Use)" should complete WRAMC Form 1662R in detail and submit in duplicate to the WRAMC Health Physics Office.

2. Application for gamma irradiators should include a copy of the proposed Standard Operating Procedures that will be implemented to assure personnel safety during routine operation and emorganizy shouticits.

3. All proposed locations where the applicant desires to use, store, or dispose of radioactive material should be coordinated with the Health Physics Office Reactor and Survey Branch prior to submission of the application in order to assure expeditious processing of the application. Submission of an incomplete application will often result in a delay in issuance of an authorization because of the correspondence necessary to obtain information requested on the application.

EXPLANATION OF WRAMC FORM 1662R (FEBRUARY 1979)

1. WRAMC Form 1662R is designed for use in supplying information on radioactive materials use programs of varying complexity. The applicant should provide complete information on his proposed program for the possession and use of radioactive material for those items that do not apply, indicate as N/A (not applicable).

2. Application for new authorizations and renewal of existing authorizations should be completed in their entirety. However, applications for amendment of existing authorizations may be completed as follows:

- a. Complete Items 1, 2, 3, 11, and 12.
- b. For those items that do not required amendment indicate as N/C (no change).
- c. For those items that require amendment indicate the proposed changes to the current authorization.

3. Explanation of WRAMC Form 1662R Items:

1. Self explanatory.

2. The "Principal User" is the individual who beats ultimate responsibility for possession, inventory and implementation of the sofety procedures necessary to assure the sofe use of the materials specified in the application. He is directly responsible to the WRAMC Radiation Control Committee. Attach a completed WRAMC Form 1643 if a current copy is not on file with the Health Physics Office.

3. The applicant's address should include organization, activity, building, room number, and reference or office symbol.

4. A ""Co-Worker" is on individual who possesses adequate training and experience with radioactive material to qualify him as a "Principal User". He works under the direction of and is responsible to the "Principal User for the safe and proper use of the materials specified in the application. List all Co-Workers alphabetically by last name. Each Co-Worker should be identified as follows: Last name, first name, middle initial and grade. Attach a completed WRAMC Form 1643 for each Co-Worker if a current copy is not on file with the Health Physics Office.

5. A "Trainee" is an individual who works under the direct supervision of a Principal User or Co-Worker for the purpose of obtaining the necessary training and experience to qualify for either status. List all trainees alphabetically by last name. Each Trainee should be identified as follows: Last name, first name, middle initial and grade.

6. A "Technician" is an individual who works under the direct supervision of a Principal User or Co-Worker for the purpose of performing certain routine duties associated with use of materials specified in the application. He does not prossess suitable training and experience to be classified as a Principal User or Co-Worker, and is not undergoing training that would qualify him to attain either status. List all Technicians alphabetically by last name. Each Technician should be identified as follows: Last name, first name, middle initial and grade.

7-9. Self explanatory.

10a. List radiaisatapes by ascending mass number, i.e., the isotope with the smallest mass number is placed at the top of the column and the isotope with the greatest mass number is placed at the bottom of the column.

10b. In addition to the chemical form of the radioisotope indicate whether it is in solid or liquid or gaseous form and whether it is a sealed or unsealed source. In order for radioactive material to qualify as a "sealed source" the radioactive source must be sealed in an impervious container which has sufficient mechanical strength to prevent contact with and dispersion of the radioactive meterial under the conditions of use and wear for which is was designed.

10c. State the maximum millicurie amount of each chemical form of the radioisotope that must be kept in the inventory in order to satisfy mission requirements.

10b. Stote the intended use of each chemical form of the radioisotopes listed in Column Da.

11-12. Self explanatory.

INFORMATION NEEDED IN AN AMENDMENT REQUEST TO AUTHORIZE EXTENDED INTERIM STORAGE OF LOW-LEVEL RADIOACTIVE WASTE IN 90-09

1. Identification of Waste to be Stored:

a. None

b. H-3, 1.5 Ci; C-14, 0.2 Ci; 2,900 cubic feet in (380) 55gallon drums.

c. (1) C

(2) solid

(3) volume reduction

(4) none

d. H-3, 200 mCi/yr, solid/dry; C-14, 30 mCi/yr, solid/dry; 440 cubic feet in (60) 55-gallon drums.

e. None

2. Plans for Final Disposal:

a. July 1994 for waste generated in Washington, DC and Maryland.

b. Texas for DC waste in 1996 and the Appalachian Compact for MD waste in 2000.

c. As soon as possible after site is available; 1-3 months.

3. Physical Description of Storage Area:

a. See attachment 1.

b. 500 drums, 60 drums/year.

c. Maintained decommissioned reactor facility.

d. Perimeter fence w/secured gate and secured brick and concrete building.

e. Forced air circulation system. This system has provided adequate ventilation for our LLRW storage and processing facility for the past several years. The additional drums of solid, long waste containing H-3 and C-14 will not require modification to this system.

f. The building has an alarm system, fire extinguishers, fire hydrant, and is inspected monthly by fire chief. The additional storage will not require additional safeguard systems or modifications to the existing systems.

Cruch 4

g. The building has a heating and cooling system.

h. The building was designed and built as a reactor with low vulnerability to other hazards.

4. Packaging and Container Integrity:

a. Dry, solid waste compacted in steel, 55-gallon drums. No hazards to integrity of containers; indefinite storage life.

b. Weekly radiation and contamination surveys to include wipe samples and visual inspection.

c. Not applicable

5. Radiation Protection:

a. Area is currently used for LLRW storage and processing with proper posting, surveying, and monitoring. The extended interim storage of H-3 and C-14 will not present a significant radiation hazard nor a significant increase in personnel exposure. The current radiation safety and ALARA programs as described in the license application are adequate for this additional storage of H-3 and C-14.

b. none

c. The Walter Reed Army Medical Center (WRAMC) Emergency Preparedness Plan is activated by dialing (202) 576-3317. This is a central notification number for WRAMC police, fire, and emergency response. The extent of activation will be dependent upon the particular situation. The extended interim storage of H-3 and C-14 will not present significant hazards or risks.

d. The radionuclides requiring extended interim storage are H-3 and C-14. The activity of the radionuclides contained in each waste package received is recorded in a log as a drum is packed. When the drum is filled and sealed the total quantity of each radionuclide is recorded on the drum's identification label. This information is also recorded and maintained on an electronic data file.

6. Training:

a. Health physics technicians attend weekly, one hour professional training classes which cover all aspects of the radiation safety program. Health Physics Office standing operating procedures are reviewed and discussed in detail as part of the training program.

7. Financial Assurance: See attached Statement of Intent.

8. Emergency Preparedness: Not required; however, WRAMC has an Emergency Preparedness Plan.

ATT 1

DEPARTMENT OF THE ARMY WALTER REED ARMY MEDICAL CENTER WASHINGTON, DC 20307-5001

REPLY TO ATTENTION OF:

Office of The Commanding General

STATEMENT OF INTENT

1. I, Ronald R. Blanck, Commander of Walter Reed Army Medical Center, am the Official duly appointed by the Headquarters, Department of the Army, to represent my organization.

2. The Nuclear Regulatory Commission Licenses for which this Statement of Intent is being issued are:

(a) License Number 08-01738-02 (expiration date 30 Apr 93)

(b) License Number 08-01738-03 (expiration date 30 Nov 96)

3. The facilities for which this Statement of Intent is being issued are:

(a) Walter Reed Army Medical Center, Washington, District of Columbia;

(b) Walter Reed Army Medical Center, Forest Glen Section and Annex, Silver Springs, Maryland;

(c) Walter Reed Army Medical Center, Department of Pathology, Fort Meade, Maryland (U.S. Army Medical Laboratory);

(d) Walter Reed Army Institute of Research, Washington, District of Columbia;

(e) Walter Reed Army Institute of Research, Rickman Building, 13 Taft Court, Rockville, Maryland;

(f) Walter Reed Army Institute of Research, Gillette Building, 270 Research Center, 1413 Research Boulevard, Rockville, Maryland;

(g) Walter Reed Army Institute of Research Animal Holding Facility, Fort Meade, Maryland;

(h) U.S. Army Institute of Dental Research Facility, Fort Meade, Maryland;

4. In accordance with the requirements of 10 CFR 30.35, and in my capacity as the Commander of Walter Reed Army Medical Center, I am providing assurance that sufficient funds for decommissioning and disposal of stored radioactive waste will be obtained when necessary for the eventual decommissioning of WRAMC's NRC Licenses and disposal of stored radioactive waste.

Karal Banch

Ronald R. Blanck Major General, U.S. Army Commander

HEALTH PHYSICS WALTER REED ARMY MEDICAL CENTER Washington, DC 20307-5001

HSHL-HP SOP# 1-26 October 28, 1993

AUDIT OF RADIOACTIVE MATERIAL AUTHORIZATIONS

1. GENERAL: In accordance with AR 40-37 and 40-61, semiannual reviews of each WRAMC Radioactive Material Authorization must be performed. Site inspection of all authorized activities and work areas are reviewed in order to determine compliance with procedures, radioisotope possession limits, record keeping, and posting requirements.

2. PURPOSE: The purpose of this SOP is to:

a. Establish the review process used to audit an authorization.

b. Define the items to be audited and establish the criteria for exceptable compliance with Federal and WRAMC regulatory requirements.

c. List the documentation required.

3. REQUIRED FORMS:

a. The following forms must be used or reviewed when setting up, conducting, and/or following up on an audit of a Radioactive Material Authorization:

1. Memorandum: Health Physics Office "Audit of Radioactive Material" (Incl 1).

2. WRAMC Audit of Radioactive Material Form (Incl 2).

3. DA Form 3862: "Controlled Substances Stock Record" (Incl 3) or equivalent.

4. Authorization Program, Isotope Inventory Report Form (generated from the computer).

6. WRAMC Form 538 "Radiation Worker Briefing Card" (Incl 4).

7. Deficient Audit Form (Incl 5)

End 5
October 28, 1993

4. PREPARING FOR AUDIT:

a. Set up appointments with Principle Users (PU) by sending (or hand carrying) Memorandum from Health Physics Office "Audit of Radioactive Material". Audits should be scheduled in groups by location so the auditor can move from one audit to the next with a minimum of lost time. Most audits can be performed in 30 minutes, large authorizations may require more time and should be scheduled accordingly. Some rearranging will be necessary as PU's call to indicate conflicts with their schedules. The auditor should select a mutually agreeable time to reschedule when notified of a conflict.

b. Print a hard copy from the Authorization Program of the authorization you will be auditing, this will include:

- (1) Administrative data
- (2) Personnel and training dates
- (3) Rooms
- (4) Isotopes and limits authorized

c. Print Isotope Inventory Report Form from dBase Inventory data base, to list the isotope shipments received since the last audit and the isotopes still active from the previous audit. This will include the following information for each isotope shipment for the authorization requested:

- (1) HPO tag number
- (2) Chemical form
- (3) Date received

(4) Original activity in millicuries

(5) A blank to list new activity in millicuries

- (6) Last updated activity in millicuries
- (7) Vendor
- (8) Purchase order number
- (9) Call number
- (10) Remarks

2

d. Two copies of the Audit Form with a carbon are prepared so a signed copy can be left with the Principle User at the time of the audit.

e. The folder containing the previous inventory records for this authorization will be pulled from the HPO file.

5. CONDUCTING AN AUDIT: The material assembled in Item 4. b, c, d and e above will be taken by the auditor to the audit. The WRAMC "Audit of Radioactive Material" form will be used as a check list of the major areas of each authorization which need to be inspected. These are:

a. DA Form 3862 (or equivalent) Inventory Records: The authorizations inventory records will be compared to the "Isotope Inventory Report" (see item 4. c.) to ensure they include all shipments delivered to them by the HPO. Each entry in the inventory records shall contain: the isotope, the HPO tag number, date received, activity received, chemical form of compound, the activity used and disposed of, and the activity remaining. The "Isotope Inventory Report" will be completed at this time to show the new "updated activity" for each shipment. This form will be signed and dated at the bottom by the person providing the inventory information and will be used to update the inventory database at the HPO. It will remain on file as a permanent inventory record.

b. Within limits: The authorizations inventory records shall indicate a running balance of activity on hand for each isotope which is authorized. The PU is responsible for ensuring that the isotope limits of each isotope are not exceeded at any time and the auditor will check the running balance against the isotope limits listed on the computer generated copy of the authorization (see item 4. b. (4)).

c. Inventory Control Officer: The individual responsible for the inventory record keeping (PU or Technician).

d. WRAMC Reg 40-10: A copy must be available to radiation workers for information on the safe handling of radioactive material.

e. WRAMC Authorization: A copy of the approved authorization and any amendments most be maintained by the PU. At this time the computer generated copy of the information on the authorization (see item 4. b.) will be shown to the PU and any discrepancies clarified. Any changes which need to be made

3

October 28, 1993

in the authorization can be noted in items 11 or 12 on this form and it will be considered as an amendment request if signed by the PU.

f. General Provisions & Terms and Conditions: A copy must be maintained on file.

g. LSC - Source No. & Location: The location of any liquid scintillation counters with sealed source numbers will be noted.

h. WRAMC 538 "Radiation Worker Briefing Card": This form, required annually for each radiation worker, shall be requested if it has been determined that present records are not current (see item 4. f.).

i. Sink Log: A logbook listing amounts of radioactive material placed into the sanitary sewage system through a wash sink must be available for each wash sink on the authorization. Entries must be made at least monthly when no washes have been performed to indicate that fact. The monthly limit for wash sinks is 100 uCi.

j. Signs and Labels: Each controlled area shall be identified with the appropriate signs such that all employees and visitors who enter shall be informed of the pertinent requirements and procedures for the protection of themselves and fellow workers against internal and external exposure. The following areas and/or documents must be posted:

- (1) Wash Sinks
- (2) LSC
- (3) Entrance/Exit
- (4) NRC Form 3 (map)
- (5) Notice to Employees Letter
- (6) Parts 19&21 of 10CFR

k. Personnel Changes: Additions or deletions. The Audit Form can be used as a memo to make personnel changes if it is signed by the PU (no authorized representative can make amendments to the authorization).

October 28, 1993

1. General Comments: List pertinent information which should be communicated to the office such as: posting new equipment, renovations of labs, pregnant workers, computer changes, name changes, etc.

m. Signature & Date of Principal User or Authorized Representative: Signature of PU needed to amend the authorization.

6. DEFICIENT AUDIT FORM: Given if the authorization is being improperly maintained for any of the following reasons:

a. Not maintaining correct inventory records.

b. Not within possession limits.

c. Failure to amend authorization to reflect changes in personnel, rooms, etc.

d. Failure to adhere to proper work practices.

ARTHUR G. SAMILJAN LTC, MS Health Physics Officer

HSHL-H-HP (385-111)

MEMORANDUM FOR

Encl.5.1

SUBJECT: Health Physics Office Audit of Radicactive Material Inventory for Authorization Number

1. This office is required to conduct periodic audits of the radicactive materials inventory for your Authorization.

2. You are scheduled to be audited on ______ at _____ hours. It is requested that the inventory officer for your Authorization be available to present inventory records and accompany the auditor during the inventory verification inspection.

3. If the date/time of the scheduled audit is not satisfactory, please contact Mr. David W. Burton, Chief, Radicactive Materials Control Branch, Telephone: 427-5104, to make alternate arrangements.

MEMORANDUM FOR

SUBJECT: Isotope Audit of Authorization

1. On_____ an Isotope Audit of Author-

ization _____ was conducted by the Health Physics Office.

2. During the Audit, deficiencies were noted for the following reasons:

_____ Failure to maintain a central record of isotope receipt and usage.

_____ Isotope shipment delivered to authorization not noted on inventory records.

____ Incorrect entries in the records in regards to the amounts of materials present.

Not within possession limits.

____Failure to notify the Health Physics Office of changes in Authorization (MEMORANDUM stating Additions or Deletions) of personnel, rooms etc.

Failure to adhere to all work practices as listed in WRAMC Regulation 40-10 and/or Authorization Terms and Conditions. Specifically:

3. Request receipt of a MEMO listing corrected deficiencies, and/or procedures which will ensure future compliance with regulations.

DAVID W. BURION Chief, Radioactive Material Branch Health Physics Office

SEP 29 1993

License No. 08-01738-02 Docket No. 030-01317 Control No. 117725

Department of the Army Walter Reed Army Medical Center ATTN: Major General Ronald R. Blanck Commanding Officer Washington, DC 20307-5001

Dear Major General Blanck:

This is in reference to your application dated January 21, 1993 and a letter dated September 9, 1993 to renew License No. 08-01738-02. In order to continue our review, we need the following, additional information:

1. Although you have indicated that you use the criteria described in 10 CFR 33.15 to evaluate individual requests to use byproduct material, this criteria is not specific enough. We requested a copy of your authorized users application form in our August 11, 1993 letter. Please also provide the details of the minimum requested information that you would require of proposed users as stated in our August letter.

Please note that our indication that a condition will be put on your license limiting the holding time of byproduct material waste does not refer to those isotopes approved for decay-in-storage. You should indicate if the addition of such a condition on your license is acceptable or submit the information indicated in Information Notice 90-09, Attachment 1.

3. In answer to Question 4 of our August letter you have not been specific. We are interested in the minimum elements of your audits such as:

a) Scope of your review of inventory and survey records of investigators.

- b) Evaluation that you will perform of user and technician training through discussion and observation.
- c) Performance of independent surveys.

OFFICIAL RECORD COPY - G:\WPS\DLTR\D93-332 - 09/29/93

ML 10

- d) Evaluation of compliance with the permit granted to the investigator and your safety manual.
- e) Provision for instructions to users and technical staff based on performance.

Please provide the details of your audit program.

4) You have indicated that your training program will be as described in Appendix A of Regulatory Guide 10.8; however, you have not answered our specific question of what records will be maintained. Please provide a list of the minimum information that will be recorded and identify each group of workers who will receive the training.

We will continue our review upon receipt of this information. Please reply in <u>duplicate</u> to my attention at the Region I office and refer to Mail Control No. 117725. If you have any technical questions regarding this deficiency letter please call me at (215) 337-5303.

Sincerely,

Original Signed By: Thomas K. Thompson

Thomas K. Thompson Senior Health Physicist Nuclear Materials Safety Branch Division of Radiation Safety and Safeguards

9/29/93

OFFICIAL RECORD COPY - G:\WPS\DLTR\D93-332 - 09/29/93

DEPARTMENT OF THE ARMY WALTER REED ARMY MEDICAL CENTER

WASHINGTON, DC 20307-5001

REPLY TO ATTENTION OF:

September 9, 1993

Health Physics Office

SUBJECT: Additional Information for Review of Renewal of U.S. Nuclear Regulatory Commission License No. 08-01738-02, mail control No. 117725

Nuclear Materials Safety Branch Division of Radiation Safety and Safeguards ATTENTION: Mr. Thomas K. Thompson U.S. Nuclear Regulatory Commission, Region I 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Dear Mr. Thompson:

In response to your letter of August 11, 1993, pertaining to the renewal of License No. 08-0738-02, Control No. 117725, the following additional information is provided:

a. The Radiation Control Committee (RCC) follows the criteria set down in 10 CFR 33.15 for evaluating physicians and other individuals to use radioactive material for nonhuman uses. After evaluations have been completed using the aforementioned criteria and additional information, the RCC makes a final decision to approve or disapprove an individual as an authorized user.

Information Notice 90-09 has been carefully reviewed. It b. does not state that license renewals not having an Interim Waste Storage Plan will have a condition placed on it which will only allow storage of LLW for a rolling two year period. It does state however, that "not all licensees who will need to store LLW onsite will need amendments to their licenses to do so". Our existing license has no condition limiting storage of radioactive material or waste, except by total activity. We intend to maintain our total inventory, to include storage of waste, below existing A rolling two year LLW storage condition will conflict limits. with our NRC approval for decay in storage of materials with halflives of up to 90 days. This requires us to hold some waste for a minimum of 2.5 years with no upper limit specified. Our waste is processed and stored in a decommissioned research reactor building which is solely occupied and secured by the Health Physics Office. The waste consist of dry, solid lab material, which is compacted into 55-gallon steel drums properly labeled and ready for disposal. It is stored under dry, temperature controlled conditions on fourlevel warehouse racks, and secured in a locked building surrounded by a locked perimeter fence. This facility has capacity to safely hold 500 drums.

OFFICIAL, RECORD COPY M. 10

117725

SEP 1 7 1993

c. Our request for a case by case exemption from the requirements of 10 CFR 35 Subpart J is hereby withdrawn.

d. Radiation safety office audits of the performance of radioactive material authorizations are conducted semiannually. The elements of each audit include compliance with Army and hospital regulations, terms and conditions of the NRC license, proper posting of signs and labels, activity on hand, location, inventory records, logs, procedures, and required personnel actions.

e. All protocols for the use of unbound radioactive iodine involve less than 10 mCi per experiment; however, iodination procedures are required to be performed in a designated glove box which is inside a chemical fume hood. Exhaust is pulled through a charcoal filter and HEPA filter before venting to the outside. The hood exhaust air and room air are periodically monitored to ensure compliance with federal standards. All nonhuman use labs use less than 100 mCi at any one time. Nuclear Medicine is the only location where quantities greater than 100 mCi are handled. One compactor is used at the Health Physics waste processing facility to compact dry, solid LLW in 55-gallon drums. The facility is secured by the Health Physics Office and routinely surveyed for contamination. The compactor is exhausted through a HEPA particulate filter and charcoal cartridge air samples are used to monitor the exhaust air for volatile gases.

f. The model training program that was published in Appendix A to Regulatory Guide 10.8 Revision 2 will be established for all radiation workers. Records will be maintained to demonstrate compliance with applicable regulations.

g. Animal holding facilities are maintained in clean areas. Animals are taken from the holding facility to a restricted area by authorized users for the introduction of radioactive material. Animals are then sacrificed, placed in a marked freezer, and picked up by Health Physics Office for appropriate disposal. Protocols requiring the holding of animals containing radioactive material greater than exempt quantities will include provisions to ensure that the holding facility is secured from unauthorized access. Only authorized users will handle animals, animal wastes and carcasses. Cages will be cleaned and decontaminated by authorized users to ensure proper disposal of radioactive material and that they are free of radioactive contamination.

h. Trigger levels for removable contamination will be >50% and >100% of Reg Guide 8.23, Table 2 limits. Trigger levels for radiation levels will be 2 times background or 1 mR/hr for gamma and 2 mR/hr or 25% of 10 CFR 20.101(a) limits.

i. Our request for authorization to decay in storage I-125 LLW for 5 half-lives rather than 10 half-lives is hereby withdrawn.

j. Amendment No. 63, dated June 22, 1993, added the Gillette building to our license. See enclosure.

k. It has been noted that M.1 and M.2 of Reg Guide 10.8, Revision 2 are missing some required information.

1. Minimum requirements for surveys in non-medical use areas will be determined by types and quantity of material. For gamma and high energy beta emitting material the users will survey daily with G-M survey meters. Health Physics will survey weekly when ≥ 200 uCi is used at any one time and monthly when <200 uCi is used. For soft beta emitting material the users will perform daily wipes at the end of each day of use when using >100 uCi at any one time. Health Physics will survey weekly when ≥ 200 uCi is used at any one time. Health Physics will survey weekly when ≥ 200 uCi is used at any one time and monthly when <200 uCi is used at any one time.

I hope the above information adequately addresses your concerns pertaining to the renewal of our broad scope license. Please contact the undersigned at (301) 427-5161 if further information is required.

Enclosure as ARTHUR G. SAMILJAN Lieutenant Colonel, U.S. Army Chief, Health Physics Office

U.S. NUCLEAR REGULATORY COMMISSION

MATERIALS LICENSE

Amendment No. 63

CONDITIONS

- B. Before disposal as normal waste, radioactive waste shall be surveyed to determine that its radioactivity cannot be distinguished from background. All radiation labels shall be removed or obliterated.
- C. Generator columns shall be segregated so that they may be monitored separately to ensure decay to background levels prior to disposal.

Except as specifically provided otherwise in this license, the licensee shall conduct its program in accordance with the statements, representations, and procedures contained in the documents, including any enclosures, listed below. The Nuclear Regulatory Commission's regulations shall govern unless the statements, representations and procedures in the licensee's application and correspondence are more restrictive than the regulations.

AUG 1 1 1993

License No. 08-01738-02 Docket No. 030-01317 Control No. 117725

Department of The Army Walter Reed Army Medical Center ATTN: Major General Ronald R. Blanck Commanding Officer Washington, D.C. 20307-5001

Dear Major General Blanck:

2.

This is in reference to your application dated January 21, 1993 to renew License No. 08-01738-02. In order to continue our review, we need the following additional information:

1. Please submit the Radiation Safety Committee's (RSC) procedures and criteria for making safe evaluations of proposed uses of radioactive material that will demonstrate the Committee's process for obtaining permission to use radionuclides. A typical "application for authorization" for human and non-human use submitted to the Committee for review should as a minimum take into account the radionuclides, physical/chemical form, and maximum activities requested by the applicant, the applicant's training and experience with the nuclides requested, the training and experience of personnel working for the applicant, the use of the requested nuclide, the applicant's facilities and equipment, and any specific hazard in the operations with the radionuclides. You should submit an example of your authorized user application and approval forms.

Please review the enclosed Information Notice 90-09. You may wish to develop an Interim Waste Storage Plan at this time. If you do not wish to develop an Interim Waste Storage Plan, a condition will continue to be placed on your license that allows storage of LLW for a rolling two year period. Submittal of an Interim Waste Storage Plan amendment in accordance with Information Notice 90-09 would be required to remove this condition from your license.

OFFICIAL RECORD COPY - G:\WPS\DLTR\D93-262 - 08/10/93

ML 10

Department of The Army

c.

3. In your request for case by case exemption from the requirements in Subpart J please confirm that exceptions are only made for unique/non-routine clinical studies that are within the physician's field of expertise and exceptions are not used to circumvent the Part 35, Subpart J requirements for routine studies. Please also submit the minimum training and experience criteria that you will use for these exceptions.

-2-

- 4. Please describe in greater detail the frequency and elements of your radiation safety office audits of the performance of individual authorized investigators that will assure that your program is operating in accordance with your procedures.
- 5. Please describe any special use facilities and equipment such as iodination facilities > 10 millicuries, large use labs > 100 millicuries or compactors.
- 6. What records will you maintain of training and testing of personnel? Please also confirm that your training program will include instructions on emergency procedures and include provisions for periodic exercises.
- 7. Regarding your use of animals in research:
 - a. Please describe the animals' housing facilities or the criteria that the RSC will follow in approving animal housing facilities.
 - b. Please submit a copy of instructions provided to animal caretakers for handling of animals, animal wastes and carcasses.
 - Please submit a copy of instructions on cleaning and decontamination of animal cages.
 - d. Please submit your procedures for ensuring that animal rooms will be locked or otherwise secured unless attended by authorized users of byproduct material.
- 8. Please specify your trigger or action levels for removable contamination and radiation levels when performing radiation surveys.
- 9. With regard to your request for authorization to decay in storage materials with halflives of less than 90 days for only 5 half-lives rather than 10 half-lives please provide the following additional information:
 - a. For all byproduct materials with half-lives of greater than or equal to 65 days, you must specifically identify the isotopes desired and describe the instrumentation and monitoring procedures that will be used to determine that the waste is free of radioactive contamination at the end of the storage period.

OFFICIAL RECORD COPY - G:\WPS\DLTR\D93-262 - 08/10/93

Department of The Army

b. For specific byproduct materials to be held only 5 half-lives, identify these separately and indicate how you will assure that the waste will contain less than the quantity of radioactive material specified in 10 CFR 20, Appendix C per waste container when placed in storage. Use the 1/R rule for multiple isotopes.

10. In Item 3 of your application you have added the Gillette building. Please provide a description of what byproduct materials uses and quantities will be used in this facility. You should indicate approximately how many laboratories you plan to establish and their general location.

11. Please note that M.1 and M.2 of Regulatory Guide 10.8, Revision 2 are missing some required information. M.1 should include the expiration date and M.2 should include expiration date and lot number.

12. Your described area radiation and contamination surveys may not be adequate for your non-medical use program. Please provide greater detail on your minimum requirements for surveys in the rest of your broad scope program. You should develop a plan for minimum survey frequencies for laboratories based on categories of risk as determined by types, quantities, and forms of byproduct material that will be handled. Please also include your action limits for survey results.

We will continue our review upon receipt of this information. Please reply in <u>duplicate</u> to my attention at the Region I office and refer to Mail Control No. 117725. If you have any technical questions regarding this deficiency letter please call me at (215) 337-5303.

In order to continue prompt review of your application, we request that you submit your response to this letter within 30 calendar days from the date of this letter.

Sincerely,

ITEM #7

7.1 and 7.2 Licensed material shall be used by or under the supervision of individuals designated by the Walter Reed Army Medical Center Radiation Control Committee. The training and experience of authorized users will be evaluated using the criteria in 10 CFR 35, Subpart J. The Radiation Control Committee may grant case-by-case exceptions.

7.3 Radiation Safety Officer: Lieutenant Colonel Arthur G. Samiljan, Chief, Health Physics Office, Walter Reed Army Medical Center. Training and experience included at ATT 7.3.

ITEM #8 We will establish and implement the model training program that was published in Appendix A to Regulatory Guide 10.8, Revision 2, and have appended a table ATT 8.1 that identifies the groups of workers who will receive training and the method and frequency of training.

ITEM #9

9.1 Enclosed at ATT 9.1 are drawings of the nuclear medicine area, a detailed drawing of the nuclear pharmacy and the source storage area in radiation therapy. The research laboratories at Walter Reed are basic biomedical research facilities with impervious floors, walls and counter tops and whatever equipment is needed for the specific research and isotopes involved. All isotope laboratories are evaluated by the Health Physics Office and approved by the Radiation Control Committee.

9.2 We will establish and implement the model procedure for calibrating survey instruments that was published in Appendix B to Regulatory Guide 10.8, Revision 2.

9.3 We will establish and implement the model procedure for calibrating our dose calibrator that was published in Appendix C to Regulatory Guide 10.8, Revision 2.

9.4 We will establish and implement the model personnel external exposure monitoring program published in Appendix D to Regulatory Guide 10.8, Revision 2, with the exception that some of our personnel who have been shown to receive much less than the ALARA limit have their monitors changed on a quarterly basis.

9.5 NA

9.6 See ATT 9.6

ITEM #10

10.1 The Charter for the Radiation Control Committee and the delegation of authority for the Radiation Protection Officer are addressed in an ARMY Technical Bulletin (TB MED 525). The duties of each are included at ATT 10.1.1. Walter Reed AMC also has a regulation which lists all standing committees at WRAMC including the Radiation Control Committee. The Composition of the RCC will include:

Deputy Commander (Chairman) Chief, Department of Medicine Chief, Department of Nursing Chief, Department of Pathology and Area Lab Services Chief, Department of Radiology Chief, Radiation Therapy Service Chief, Nuclear Medicine Service Health Physics Officer (RPO) Senior Nuclear Pharmacist Assistant Health Physics Officer (alternate RPO) (Recorder) Director, WRAIR Radiation Safety Officer, WRAIR Radiation Protection Officer, AFIP

We will also include any others required by 10 CFR 35. The orders delegating authority to Lieutenant Colonel Samiljan are included at ATT 10.1.2.

10.2 We will establish and implement the model ALARA program published in Appendix G to Regulatory Guide 10.8, Revision 2.

10.3 We will establish and implement the model procedure for leak-testing sealed sources that was published in Appendix H to Regulatory Guide 10.8, Revision 2.

10.4 We will establish and implement the model safety rules published in Appendix I to Regulatory Guide 10.8, Revision 2.

10.5 We will establish and implement the model spill procedures published in Appendix J to Regulatory Guide 10.8, Revision 2.

10.6 We will establish and implement the model guidance for ordering and receiving radioactive material that was published in Appendix K to Regulatory Guide 10.8, Revision 2.

10.7 We will establish and implement the model procedure for opening packages that was published in Appendix L to Regulatory Guide 10.8, Revision 2.

10.8 We will establish and implement the model procedure for a unit dosage record system that was published in Appendix M.1 to Regulatory Guide 10.8, Revision 2.

10.9 We will establish and implement the model procedure for a multidose vial record system that was published in Appendix M.2 to Regulatory Guide 10.8, Revision 2.

10.10 We will establish and implement the model procedure for measuring and recording molybdenum concentration that was published in Appendix M.3 to Regulatory Guide 10.8, Revision 2.

10.11 We will establish and implement the model procedure for keeping an inventory of implant sources that was published in Appendix M.4 to Regulatory Guide 10.8, Revision 2.

10.12 We will establish and implement the model procedure for area surveys that was published in Appendix N to Regulatory Guide 10.8, Revision 2.

10.13.1 We will collect spent noble gas in a shielded trap and monitor the trap effluent with an air contamination monitor that we will check regularly according to the manufacturer's instructions.

10.13.2 We will collect spent aerosol in a shielded, single-use trap.

10.13.3 We will follow the model procedure for calculating airborne effluent concentration that was published in Appendix 0.2 to Regulatory Guide 10.8, Revision 2.

10.13.4 We will calculate spilled gas clearance times according to the procedure that was published in Appendix 0.4 to Regulatory Guide 10.8, Revision 2.

10.14 We will establish and implement the model procedure for radiation safety during radiopharmaceutical therapy that was published in Appendix P to Regulatory Guide 10.8, Revision 2, except for the provision at ATT 10.14.

10.15 We will establish and implement the model procedure for radiation safety during implant therapy that was published in Appendix Q to Regulatory Guide 10.8, Revision 2.

10.16 General Safety Proceedures See ATT 10.16

ITEM #11

11.1 We will establish and implement the general guidance and model procedures for waste disposal that were published in Appendix R to Regulatory Guide 10.8, Revision 2, except for the provision to hold for decay-in-storage material with a physical half-life of less than 90 days, as previously approved by the NRC (see ATT 11.1.1, ATT 11.1.2, and ATT 11.1.3). We also generate a large volume of RIA waste at the Drug Testing Lab at Ft. Meade (25 drums per month and increasing) which we would like to be able to hold for decay for only 5 half-lifes and dispose of, if all other conditions are meet. This waste is mostly empty, washed test tubes which are only minimally contaminated prior to the decay in storage process. This waste is generated at a location were RIA kits are the only radioactive material use and the waste is kept segregated from all other laboratory waste in separate sealed 55 gal. drums.

11.2 See Item 11.1.

CURRICULUM VITAE

for

ARTHUR G. SAMILJAN, Lieutenant Colonel

DATE AND PLACE OF BIRTH:

YEARS OF ACTIVE MILITARY SERVICE: 20 years

<u>PRESENT ASSIGNMENT</u>: (21 Jun 91 to present) Chief, Health Physics Office; RPO Walter Reed Army Medical Center, Washington, DC 20307-5001

MILITARY EDUCATION (pertinent to radiation protection):

- Medical Effects of Nuclear Weapons Course, 8-12 Sep 86 Armed Forces Radiobiology Research Institute Bethesda, Maryland
- 2. Army Medical Department Physics and Military Medicine Course, 26-30 Oct 87 U.S. Army Environmental Hygiene Agency Aberdeen Proving Ground, Maryland

(included presentations on management of radiation protection programs and topical radiation protection issues)

- Radiological Hazards Associated with Depleted Uranium Munitions Course, 16-20 Nov 87
 U.S. Army, Belvoir Research, Development & Engineering Center, Fort Belvoir, Virginia
- 4. Laser Microwave Hazards Workshop, 25-29 Apr 88 U.S. Army Environmental Hygiene Agency Aberdeen Proving Ground, Maryland
- The Army Medical Department Radiation Health Sciences Course, 24-28 Oct 88
 U.S. Army Environmental Hygiene Agency Aberdeen Proving Ground, Maryland

(included presentations on management of radiation protection programs and topical radiation protection issues)

6. Senior Officer Nuclear Accident Course, 24-27 Apr 89 InterService Nuclear Weapons School Kirtland Air Force Base, New Mexico

MILITARY EDUCATION (continued):

- 7. Management of Radiation Accidents and Emergency Preparedness Training Course, 5-9 Jun 89 U.S. Army, Belvoir Research, Development & Engineering Center, Fort Belvoir, Virginia
- Nuclear Weapons Incident Seminar, 7-8 Mar 91 Naval Base Norfolk, Virginia
- Medical X-Ray Survey Techniques Course, 15-26 Apr 91 Academy of Health Sciences Fort Sam Houston, Texas

<u>CIVILIAN EDUCATION</u> (relative to radiation protection):

Graduate Study leading to Master of Science Degree in Environmental Engineering (emphasis in Health Physics) Aug 84 - Dec 85 University of Florida Gainesville, Florida

HEALTH PHYSICS EXPERIENCE:

 Nuclear, Biological, and Chemical Officer Mar 76 - Jun 77 44th Medical Brigade Fort Bragg, North Carolina

(included designing and supervising the training of 100 personnel in battle field radiation detection, survey techniques, monitoring, decontamination, and protection)

2. Nuclear, Biological, and Chemical Officer Jun 77 - Dec 78 5th General Hospital Bad Cannstatt, Germany

(included designing and supervising the training of 350 personnel in battle field radiation detection, survey techniques, monitoring, decontamination, and protection)

3. Manager, Department of the Army, Nuclear Test Personnel Review Jan 86 - Dec 87 Environmental Support Group Washington, DC

(included the identification, dose assessments, and notification of all Army personnel who participated in the atmospheric nuclear testing program from 1944 to 1963.

ATTACHMENT 7.3

4. Medical Health Physics Consultant Dec 87 - Jun 89 Headquarters, Army Materiel Command Office of the Command Surgeon Alexandria, Virginia

(included being the Commanding General's action officer for health aspects of ionizing and nonionizing radiation as applied to the command's workforce, and technical advisor on health hazard assessment of new materiel and to related materiel management processes)

5. Contract Manager, Johnston Island Plutonium Clean-up Project Jun 89 - Aug 90 Field Command Defense Nuclear Agency Johnston Atoll

(included planning, directing, and supervising the clean-up project, conducting radiological site surveys, and establishing procedures for packaging, storing, and disposal of radioactive waste)

6. Chief, Operations Branch/Assistant RPO Aug 90 - Jun 91 Health Physics Office Walter Reed Army Medical Center Washington, DC

(included reviewing x-ray compliance surveys and radioisotope laboratory room surveys, monitoring radiation therapy procedures, performing x-ray shielding evaluations and dose assessments, and assisting the RPO in the preparation and execution of all radiation protection policies in support of the medical center's NRC license, and ionizing and nonionizing radiation producing devices)

7. Chief, Health Physics Office/Radiation Protection Officer Jun 91 - Present Health Physics Office Walter Reed Army Medical Center Washington, DC

(Manage 20 health physicists and health physics technicians providing radiation safety support to Walter Reed Army Medical Center, Walter Reed Army Institute of Research, Armed Forces Institute of Pathology, and other federal agencies in the Washington, DC regional area. Executive agent for two NRC Licenses.)

ATT 9.6

In addition to the Facilities described in Item 9.1 the following equipment and control systems are available as required for the safe handling of radioactive material:

o Remote handling equipment including jaws, vices, forceps, and remote handling tongs of varying lengths.

o Storage containers including steel safes, lead lined boxes, steel drums, lead pigs, and lead storage containers both fixed and movable.

o Shielding including movable lead shields for shielding patients, L shields both lead and plastic, and shielding materials (e.g. lead bricks, lead shot, lead wool, plastic sheet etc.).

o Radiation measuring and counting equipment including liquid scintillation counting systems, gamma well counting systems, alpha gas flow counting systems, portable surveys instruments including GM, Ion chamber, and Scintillation detectors.

o Ventilation Control systems including Fume hoods with HEPA particulate filters, and iodination filter boxes with charcoal filters and charcoal sampling systems for use with volatile isotopes. f. The Radiation Control Committee will--

 (1) Meet at least quarterly and at the call of the chairman.
 (2) Recommend approval or disapproval of each type of radiation source from the standpoint of radiological health and safety of patients and working personnel and other factors established for the medical use of these sources.

(3) Recommend individual users for each type of procedure with each individual radionuclide and ensure that any physician authorized to use radioactive material in humans meets the criteria specified in part 35, title 10, Code of Federal Regulations (10 CFR 35). Recommendations will be consistent with the limits and conditions of the NRC license and DARA.

(4) Recommend individual pharmacists and individual compounding protocols for compounding radioactive drugs (radiopharmaceuticals) or radiopharmaceutical kits to be administered to patients (if the procedure is permitted to be performed by NRC license or DARA).

(5) Prescribe, if required, special conditions to be permitted in the work area and special procedures or work rules for use of radiation sources.

(6) Formulate and review the radiation protection training program.

(7) Monitor radiation exposures within the command and recommend actions to keep exposures as low as is reasonably achievable (ALARA). As a minimum, the collective dose to all radiation workers, average dose, and highest individual dose will be reviewed at quarterly meetings.

(8) Formally review, at least annually, the policies and procedures established to maintain low exposures.

(9) Approve the training and experience of the nuclear pharmacist.

g. The RPO, in addition to the responsibilities in 10 CFR 35, 21, will--

(1) Exercise staff supervision over the Radiation Protection Program.

(2) Provide consultation and advice on the degree of hazards associated with radiation and effectiveness of control measures.

(3) Advise and assist the commander and radiation workers in all matters pertaining to radiation protection, including instructing and training of workers (users) and others in the safe use of protective equipment and radiation producing devices.

(4) Ensure all radioactive materials are properly receipted, used, stored, handled, shipped, and disposed of according to applicable directives.

(5) Formulate and implement the Radiation Protection Program.

(6) Formulate, implement, and supervise an active, aggressive, documented program designed to keep radiation doses to levels which are ALARA. (7) Review the current and proposed uses of radiation sources for compliance with regulations and approved procedures.

(8) Review standing operating procedures for operations involving sources of ionizing radiation before submission to the Radiation Control Committee.

(9) Review procurement of all radioactive materials to ensure compliance with NRC licenses or DARA conditions.

(10) Ensure radiation survey and/or detection instruments used in radiation protection are properly calibrated and are available to radiation workers.

(11) Ensure all radiation shields, containers, and handling equipment are maintained in satisfactory condition.

(12) Ensure the required radiation warning signs are posted.

(13) Ensure that a physical inventory of radioactive materials is conducted every 3 months.

(14) Ensure that radiation surveys are performed at least quarterly and that leak tests are performed semiannually (NRC Reg Guide No. 8.23).

(15) Evaluate hazard potential and adequacy of protective measures for existing and proposed operations.

(16) Monitor situations where higher than normal levels of radiation or radioactive contaminants are suspected.

(17) Investigate radiation accidents and incidents and overexposures to determine the cause and take steps to prevent recurrence.

(18) Terminate a program or procedure involving the use of radioactive material or radiation producing devices which are determined to be a medical threat to health and property.

(19) Keep all licenses and DARAs up to date and initiate amendments and requests for renewals when appropriate.

(20) Maintain a current registry of ionizing radiation producing devices, such as x-ray machines, per TB MED 521.

10.13.1 We will collect spent noble gas in a shielded trap and monitor the trap effluent with an air contamination monitor that we will check regularly according to the manufacturer's instructions.

10.13.2 We will collect spent aerosol in a shielded, single-use trap.

10.13.3 We will follow the model procedure for calculating airborne effluent concentration that was published in Appendix 0.2 to Regulatory Guide 10.8, Revision 2.

10.13.4 We will calculate spilled gas clearance times according to the procedure that was published in Appendix 0.4 to Regulatory Guide 10.8, Revision 2.

10.14 We will establish and implement the model radiation safety during radiopharmaceutical thera published in Appendix P to Regulatory Guide 10.8, Continue except for the provision at ATT 10.14.

10.15 We will establish and implement the model radiation safety during implant therapy that was Appendix Q to Regulatory Guide 10.8, Revision 2.

10.16 General Safety Proceedures See ATT 10.16

ITEM #11

11.2 See Item 11.1.

10.13.1 We will collect spent noble gas in a shielded trap and monitor the trap effluent with an air contamination monitor that we will check regularly according to the manufacturer's instructions.

10.13.2 We will collect spent aerosol in a shielded, single-use trap.

10.13.3 We will follow the model procedure for calculating airborne effluent concentration that was published in Appendix 0.2 to Regulatory Guide 10.8, Revision 2.

ITEM **#11**

11.1 We will establish and implement the general guidance and model procedures for waste disposal that were published in Appendix R to Regulatory Guide 10.8, Revision 2, except for the provision to hold for decay-in-storage material with a physical half-life of less than 90 days, as previously approved by the NRC (see ATT 11.1.1, ATT 11.1.2, and ATT 11.1.3). We also generate a large volume of RIA waste at the Drug Testing Lab at Ft. Meade (25 drums per month and increasing) which we would like to be able to hold for decay for only 5 half-lifes and dispose of, if all other conditions are meet. This waste is mostly empty, washed test tubes which are only minimally contaminated prior to the decay in storage process. This waste is generated at a location were RIA kits are the only radioactive material use and the waste is kept segregated from all other laboratory waste in separate sealed 55 gal. drums.

11.2 See Item 11.1.

Department of the Army

ii. The action levels are determined to be ALARA based upon consideration of worker, environmental, and public exposures.

Submit a description of the procedures to be followed to determine these criteria are met.

We will continue our review upon receipt of this information. Please reply in <u>duplicate</u> to my attention at the Region I office and refer to Mail Control No. 116472. The reviewer for this licensing action is Pamela Henderson. If you have any technical questions regarding this deficiency letter please call the reviewer at (215) 337-6952.

If we do not receive a reply from you within 30 calendar days from the date of this letter, we shall assume that you do not wish to pursue your application.

Sincerely,

roma K tomp

Jenny M. Johansen, Chief Medical Licensing Section Division of Radiation Safety and Safeguards

DEPARTMENT OF THE ARMY

WALTER REED ARMY MEDICAL CENTER WASHINGTON, DC 20307-5001

REPLY TO ATTENTION OF:

24 November 1992

Health Physics Office

United States Nuclear Regulatory Commission Attention: Chief, Medical Licensing Section Division of Radiation Safety and Safeguards 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Dear Ms. Jenny M. Johansen:

We provide the following information in reference to Mail Control No. 116472 and in response to your memo, dated 16 November 1992, requesting additional information concerning our dedicated iodine-131 therapy room.

As a matter of standing operating procedure, the dedicated therapy room, Room 7437, remains <u>closed</u> and <u>locked</u> when there are no iodine therapies. Only the Health Physics Office possesses a key to that room.

Decontamination limits for this room will be the restricted area action limits established in NRC Regulatory Guide 8.23, "Radiation Safety in Medical Institutions". Health Physics Office personnel will decontaminate the room below this level of removable contamination prior to admittance of an iodine-131 radiation therapy patient into Room 7437.

We hope that this information will satisfy your questions and permit you to grant our exemption to 10 CFR 35.315(a)(7). We appreciate your prompt attention to this matter.

Your point of contact for this matter is the undersigned at (301)-427-5104/5107.

Sincerely,

ARTHUR G. SAMTLJAN Lieutenant Colonel, US Army Health Physics Officer

ATT 10.16

Following are general rules for the safe use of radioactive materials:

1. Wear laboratory coats or other protective clothing at all times in areas where radioactive materials are used.

2. Wear disposable gloves at all times while handling radioactive materials.

3. Monitor hands and clothing for contamination after each procedure or before leaving area.

4. Do not eat, drink smoke, or apply cosmetics in any area where radioactive material is stored or used.

5. Wear assigned personnel monitoring device(s) at all times while in areas where radioactive materials are used or stored. Whole body monitoring device(s) should be worn at chest or waist level.

6. Dispose of radioactive waste only in specifically designated receptacles.

7. Never pipette by mouth.

8. Confine radioactive solutions in covered containers plainly identified and labeled with name of compound, radionuclide, date activity, and radiation level, if applicable

9. Always transport radioactive materials in appropriate shielding and containers.

DEPARTMENT OF THE ARMY WALTER REED ARMY MEDICAL CENTER WASHINGTON, D.C. 20307-5001

REPLY TO ATTENTION OF:

.1.9 .10到 1557

HSHL-H-HP (385-11m)

MEMORANDUM THRU

Commander, US Army Health Services Command, ATTN: HSCL-P, Fort Sam Houston, TX 78234-6000

HQDA (SGPS-PSP-E), 5109 Leesburg Pike, Falls Church, VA 22041-3258

FOR US Nuclear Regulatory Commission, Region I, Nuclear Material Safety Section A, 475 Allendale Road, King of Prussia, PA 19406

SUBJECT: Amendment of US Nuclear Regulatory Commission License No. 08-01738-02

1. Request that NRC License No. 08-01738-02 for Walter Reed Army Medical Center be amended to reflect a change in the Radiation Safety Officer from 1Lt. Allen W. Anthony to LTC Peter H. Myers. LTC Myers has been assigned as the Chief, Health Physics Office at Walter Reed AMC since August 1989. A Training and Experience Form and a Curriculum Vitae for LTC Myers are enclosed (Enclosures 1 and 2).

2. Request that Walter Reed's license also be amended to allow the holding for decay of radioactive waste containing isotopes with half lives up to ninety (90) days. We have been decaying waste with half lives of sixty five (65) days or less for a few years and have a good program for segregating, packaging, storing, and disposing of this material. We have the space to hold material for three (3) years instead of the current twenty two (22) months. Some protocols at Walter Reed use P-32 and S-35 in the same labs or even the same experiments, requiring that all the waste be packaged for burial because of the S-35 half life. Some animal studies use three (3) or four (4) different microspheres to measure blood flow at different time points in an experiment, Cr-51, Ru-103, and Ce-141 (all with half HSHL-H-HP SUBJECT: Amendment of US Nuclear Regulatory Commission License No. 08-01738-02

lives of less than sixty five (65) days) may be used with Sc-46 so all the waste has to be packaged for burial. This amendment would reduce our solid waste volume to the burial ground by 10-20%.

FOR THE COMMANDER:

2 Encls

ano nºs LTC, MS

Executive Officer

1. **1** 1.

HSHL-H-HP (385-11m)

15 March 1991

MEMORANDUM FOR US Nuclear Regulatory Commission, Region I, Nuclear Material Safety Section A, 475 Allendale Road, King of Prussia, PA 19406

SUBJECT: Amendment of US Nuclear Regulatory Commission License No. 08-01738-02. Additional information requested Docket No. 030-01317, Control No. 112925.

This is in reference to your request in a letter dated February 5, 1991 for additional information on our decay-in-storage program. The following information is provided in response to those questions.

1. The existing program for research waste with half-lives of 65 days or less generates 50-60 55gal. drums of compacted trash per year. The expected increase with half-lives of 90 days or less could raise the total to 60-75 drums per year. We currently hold this waste for 24 months to ensure at least 10 half-lives for the longest isotopes, which means we have between 100 and 120 drums in storage at any one time. Holding all our short halflife waste for 30 months could mean up to 185 drums in storage at any one time.

2. Enclosure 1 is a copy of one of the "Terms and Conditions" which all users of radioactive material at Walter Reed most follow. All the solid radioactive waste at Walter Reed is collected, screened, and packaged by the Health Physics Office. Bags of waste are examined by the health physics personnel when they are collected and again when they are compacted to ensure the proper segregation and defacing of any radioactive labels has occurred.

3. When the solid, short half-life, radioactive material is compacted it is in a 55 gal. steel drum (DOT 17H). The drum is sealed shut, the out side is marked with an I.D. number with an indelible marker, and the following information is recorded; the drum I.D., all isotopes in the drum and the initial activity of each, the date the drum was closed. When this drum is ready for disposal it is re-entered in a local disposal log and data base which includes; I.D. number, date closed, date disposed, survey instrument model, serial number and calibration date, background HSHL-H-HP (385-11m)

SUBJECT: Amendment of US Nuclear Regulatory Commission License No. 08-01738-02. Additional information requested Docket No. 030-01317, Control No. 112925.

readings, maximum readings of waste, and initials of person performing survey and waste disposal.

When the waste has been held for decay for at least 10 half-4 _ lives of the longest half-life material present, the drums are moved to a low background area and surveyed with a portable survey meter with a remote GM or scintillation probe. If no readings above background are found the drums are opened and the material is surveyed again as it is removed from the drum. Currently we are using a Ludlum model 2 with a GM probe which is calibrated in mr/hr. The normal background is approximately 0.05 mr/hr which is 10% of full scale on the lowest scale. If I-125 is the major remaining contaminate a low energy gamma scintillation probe may also be used to ensure no external radiation levels above background are present. The waste when originally packaged contains at most a few millicuries of activity, after at least 10 half-lives it contains at most a few microcuries of activity and no measurable external exposure. In addition this waste will continue to decay in a land fill at the rate of at least 4 half-lives per year making the likelihood of any internal deposition remote. Any biological waste held for decay will be incinerated at the conclusion of the decay period which will preclude the ingestion of this material.

5. The medical waste in question will be compacted into 55 gal. steel drums as outlined in question 3's response.

6. The waste storage facility at WRAMC is a

This building is constructed of concrete, concrete block and brick, it has no windows and very little flammable material involved in it's construction. This building is dry and heated and has a maximum capacity to hold two or three times the amount of waste we will be holding when this amendment is granted. This building is under the sole control of the Health Physics Office with

PETER H. MYPES LTC, MS Health Phypics Officer

HEALTH PHYSICS WALTER REED ARMY MEDICAL CENTER Washington, D.C. 20307-5001

CONDITION NO. 4

For

RADIOACTIVE MATERIAL AUTHORIZATIONS

RADIOACTIVE - WASTE

1. <u>General</u>. Radioactive waste from Walter Reed Army Medical Center and tenant activities will be controlled, packaged, transported, and disposed of in accordance with AR 385-11, "Ionizing Radiation Protection;" Title 10, Code of Federal Regulations; Title 49, Code of Federal Regulations; Nuclear Regulatory Commission Licenses issued to WRAMC; applicable provisions of State Government requirements for waste disposal sites located within their jurisdiction; and the guidelines delineated herein.

2. Definitions:

a. <u>Radioactive Material</u>: Any material or combination of materials that spontaneously emits gamma rays, X-rays, alpha particles, beta particles, neutrons, or other atomic particles that are capable of producing ions, directly or indirectly by their passage through matter.

b. <u>Radioactive Waste</u>: Surplus items containing radioactive material, property contaminated with radioactive material to the extent that decontamination is economically unsound, and materials that have become contaminated during possession/use of radioactive material.

c. <u>Activity</u>: The number of nuclear transitions (disintegrations) occurring in a given quantity of material per unit time (disintegrations per second); expressed in units of Curies or Becquerels.

d. <u>Specific Activity</u>: Total activity of a given radionuclide per gram of a compound, element, or radioactive nuclide.

e. <u>Curie</u>: The special unit of activity. One curie equals 3.700 X 10¹⁰ nuclear transitions per second. (Abbreviated Ci.). Several fractions of the curie are in common usage:

(1) <u>Microcurie</u>: One-millionth of a curie $(3.7 \times 10^4 \text{ disintegrations})$ per sec.). Abbreviated μ Ci.

(2) <u>Millicurie</u>: One-thousandth of a curie (3.7 X 10⁷ disintegrations per sec.). Abbreviated mCi.

REVISION 2, effective 13 Apr 87

ATTACHMENT 11.1.2

Enel 1

CONDITION NO. 4 FOR RADIOACTIVE MATERIAL AUTHORIZATIONS (RADIOACTIVE WASTE)

- (12) Animal Carcasses/Animal Waste: Short half-life.
- (13) Animal Carcasses/Animal Waste: Long half-life.
- (14) <u>Animal Carcasses</u>: \leq 0.05 Microcuries H-3 or C-14 per gram of animal tissue averaged over the entire weight of the animal.
- (15) Gas, Combustible.
- (16) Gas, Non-combustible.

b. Limiting the non-radioactive waste which is intermixed with radioactive waste to an absolute minimum.

c. Removing or obliterating all "Radioactive Material" labels on nonradioactive vendor shipping packages and on short half-life radioactive waste. Uncontaminated vendor shipping containers may be disposed of in the normal trash by the users. Short half-life waste will be delivered to Health Physics Office (HPO) collection points for subsequent storage, decay, and ultimate disposal in the normal trash when HPO personnel have determined that the waste has reached natural background radiation levels.

d. Storing used Mo-99/Tc-99m generators and other items of equipment containing radioactive material in designated areas only. The radiation labels will be removed on such items only when they reach background radiation levels.

e. Maintaining their inventory of radioactive waste to a practical minimum.

f. Controlling radioactive waste in their work areas to prevent unauthorized disposal by the custodial service. Magenta plastic bags will be used to contain radioactive waste. Magenta bags will not be used for other purposes.

g. Insuring that all radioactive waste is delivered to HPO collection point personnel for ultimate disposal.

h. Marking all radioactive waste containers with the radiation caution symbol and the words "Caution - Radioactive Waste" and/or "Caution -Radioactive Material." Plus "DO NOT EMPTY!"

i. Insuring that radioactive material is not released into the sanitary sewage system without the specific approval of the Health Physics Officer.

j. Insuring that decontamination of reusable equipment is only performed in laboratory sinks that have been authorized via their Radioactive Material Authorization. See <u>Section II</u> for specific requirements concerning this procedure.

ATTACHMENT 11.1.2

CONDITION NO. 4 FOR RADIOACTIVE MATERIAL AUTHORIZATIONS (RADIOACTIVE WASTE)

i. Biological wastes (e.g., animal carcasses/animal waste) shall be prepared by the User in a manner that allows the waste to be readily packed in in a 30gallon drum alternating 10-inch layers of waste and packing materials. Prepared biological waste shall be placed in double magenta plastic bags and tagged as previously indicated.

SECTION II - RELEASE OF RADIOACTIVITY INTO THE SANITARY SEWAGE SYSTEM

1. Liquid waste will be released to the sanitary sewage system in accordance with Title 10, Code of Federal Regulations, Chapter 1, Part 20.303 (i.e., 10 CFR 20).

2. Unless specifically authorized by the Health Physics Office, all releases of radioactive liquid to the sanitary sewerage system will be conducted by the Health Physics Office to assure that the quantity of radioactive material released into the system by combined WRAMC disposal procedures does not exceed the following limits:

a. The quantity of any licensed or other radioactive material released into the system by WRAMC in any one day does not exceed the larger of paragraphs a(1) or (2) below.

(1) The quantity which, if diluted by the average daily quantity of sewage released into the sewer by WRAMC will result in an average concentration equal to the limits specified in Appendix B, Table I, Column 2 of 10 CFR 20 or

(2) Ten times the quantity of such material specified in Appendix C of 10 CFR 20-and

b. The quantity of any licensed or other radioactive material released in any one month, if diluted by the average monthly quantity of water released by WRAMC, will not result in an average concentration exceeding the limits specified in Appendix B, Table I, Column 2 of 10 CFR 20 and

c. The gross quantity of licensed and other radioactive material, excluding hydrogen-3 and carbon-14, released into the sewerage system by WRAMC does not exceed one curie per year. The quantities of hydrogen-3 and carbon-14 released into the sanitary sewerage system may not exceed 5 curies per year for hydrogen-3 and 1 curie per year for carbon-14. Excreta from individuals undergoing medical diagnosis or therapy with radioactive material shall be exempt from any limitations contained in this document.

3. The following policy and procedures apply to all individuals permitted to release radioactive washings into the sanitary sewage system via laboratory sinks:

a. Such release approval must be specifically included in the Principal User's WRAMC Radioactive Material Authorization.

5

CONDITION NO. 4 FOR RADIOACTIVE MATERIAL AUTHORIZATION (RADIOACTIVE WASTE)

SECTION IV - RADIOACTIVE WASTE DISPOSAL SUPPLIES

1. Items of supply for the containment and packaging of radioactive waste are stocked by the Supply and Administration Branch, Materiel Division, Directorate of Industrial Operations, WRAMC. The stockage items meet U.S. Army and Federal radioactive material packaging requirements for most of the radioactive waste resulting from laboratory and/or clinic procedures at WRAMC, WRAIR and AFIP. However, it should be noted that packaging requirements vary with the particular type, form and curie amount of the radioactive waste. Consequently, all personnel involved with the packaging of radioactive waste should consult the Health Physics Office in order to assure that the available stockage items meet packaging specification requirements for each particular radioactive waste disposal operation.

2. Following are the currently stocked items:

a. DRUM, Steel, DOT Specification 17-H, 30-gallon with gasket and sealing bolt. (Used as shipping container for the transport of radioactive biologicals).

b. DRUM, Steel, DOT Specification 17-H, 55-gallon with gasket and sealing bolt. (Used as a shipping container for the transport of low-level radioactive materials).

c. VERMICULITE, 4 cu ft bags. (Used as an absorbent material for the packaging of biological and liquid radioactive waste) - agricultural, Grade 4.

d. SLAKED LIME (Used to retard spoilage of biological radioactive waste).

e. BAG, Plastic, Magenta, 20" x 15" x 60", 4 mil thickness. (Used as a liner for large waste receptacle).

f. BAG, Plastic, Magenta, $13" \times 12" \times 24"$, 2 mil thickness. (Used as a liner for small laboratory radioactive waste receptacle).

g. DIATOMACEOUS EARTH, medium grade (floor dry #85), 2.5 cu ft bag. (Used as an absorbent material for packaging of liquid radioactive waste).

3. Additional items will be stocked or procured as required to meet the provisions of Federal/State regulatory agencies.

4. Principal Users are responsible for funding the costs of materials and supplies used to dispose of radioactive wastes. Although Principal Users will pay for the supplies they stock for use in their particular areas, the Health Physics Office, RMC Branch, will order and pick up the supplies needed to collect and package the radioactive waste received from the Principal Users. All orders placed by the Health Physics Office for radioactive waste disposal supplies for the hospital, WRAIR and AFIP will be funded by Clinical Investigation, Department of Pathology/Laboratory Services, Department of Radiology, WRAIR, or AFIP as appropriate.

- C. Physicians, dentists, or podiatrists designated to use licensed material in or on humans shall meet the training criteria established in 10 CFR 35, Subpart J and shall be designated in writing by the licensee's Radiation Safety Committee.
- D. The Radiation Safety Officer for this license is LTC William B. Johnson.
- 12. In addition to the possession limits in Item 8, the licensee shall further restrict the possession of licensed material at a single location to quantities below the limits specified in 10 CFR 30.72 which require consideration of the need for an emergency plan for responding to a release of licensed material.
- 13. Notwithstanding the requirements of 10 CFR 35.49(a) and (b), 35.100, 35.200, 35.300, 35.400 and 35.500 the licensee may use for any medical use any byproduct material or reagent kit. The licensee shall possess and use byproduct material for medical use in accordance with the prescriptive and performance criteria in the other sections of 10 CFR 35. This does not relieve the licensee from complying with applicable U.S. Food and Drug Administration (FDA) and other Federal and State requirements.
- 14. A. Detector cells containing a titanium tritide this or a scandium tritide foil shall only be used in conjunction with a professory operating temperature control mechanism which prevents the foil temperatures from exceeding that specified in the certificate of registration referred to 1.10 CFR 32.210.
 - B. When in use, detector cells containing actuality tritide foil or a scandium tritide foil shall be sented to the pursue.
- 15. The licensee shall conduct a prevaical inventory every three months to account for all sealed sources and devices containing freensed material received and possessed pursuant to 10 CFR 35(59, 35.400 and 35.500 and every six months for all other sealed sources and devices.
- 16. A. Sealed sources and detector cells containing licensed material shall be tested for leakage and/or contamination at intervals not to exceed six months or at such other intervals as are specified by the certificate of registration referred to in 10 CFR 32.210, not to exceed three years.
 - B. Notwithstanding Paragraph A of this Condition, sealed sources designed to emit alpha particles shall be tested for leakage and/or contamination at intervals not to exceed three months.
 - C. In the absence of a certificate from a transferor indicating that a leak test has been made within six months prior to the transfer, a sealed source or detector cell received from another person shall not be put into use until tested.

- D. Each sealed source fabricated by the licensee shall be inspected and tested for construction defects, leakage, and contamination prior to any use or transfer as a sealed source.
- E. Sealed sources and detector cells need not be leak tested if:

(i) they contain only hydrogen-3; or

Dear Colonel Myers:

Enclosed is the Corrected Copy of Amendment No. 66 for License No. 08-01738-02. As discussed during your recent inspection, the condition granting an exemption to the decontamination requirements of 10 CFR 35.315(a)(7) has been added to the amendment and the date of the renewal application has been corrected.

We apologize for any inconvenience this error may have caused.

Sincerely,

Original Signed By: Francis M. Costelio

ATTN: WILLIAM B. JOHNSON

RE: Docket Number: 030-01317 License Number: 08-01738-02

Dear Col. Johnson:

This letter acknowledges receipt of your letter dated November 1, 1994, in response to our letter which addressed deficiencies in your Quality Management Program (QMP). Your implementation of the QMP and its adequacy will be reviewed as part of the next NRC inspection. This inspection will include a review of your letter referenced above and any resulting changes to your QMP.

This QMP will not be incorporated into your license by condition. You have the flexibility to make changes to your quality management program without obtaining prior NRC approval. However, modifications to your program must be submitted to this Office within 30 days as required by 10 CFR 35.32(e).

Thank you for your cooperation in this matter; no reply is required in response to this letter.

Sincerely,

REPLY TO ATTENTION OF:

1 November 1994

Health Physics Office

SUBJECT: Quality Management Program (QMP), Reference Docket Number 030-01317, License Number 08-01738-02, QMP File Date of 27 January 1992, Region I

Nuclear Materials Safety Branch Division of Radiation Safety and Safeguards ATTENTION: QMP Coordinator/Mr. James P. Dwyer U.S. Nuclear Regulatory Commission, Region I 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Dear Mr. Dwyer:

Your letter of 28 September 1994, subject as above, was received by the Health Physics Office, Walter Reed Army Medical Center, Washington, D.C, on 27 October 1994. The referenced letter requested that we immediately update the Quality Management Program (QMP), which was dated 27 January 1992, and submit the new QMP to the NRC, Region I.

Since the QMP dated 27 January 1992, the following revisions and actions of the QMP have taken place:

a. A memorandum, dated 2 June 1994, subject: Additional Information for Review of Renewal of USNRC License No. 08-01738-02, mail control number 117725, was submitted to USNRC Office, Region I. Enclosure 2 of this memorandum provided the QMP for the Nuclear Medicine Service, Walter Reed Army Medical Center (WRAMC), dated 22 March 1994. Also the QMP for brachytherapy from the Radiation Oncology Service, WRAMC, was provided.

b. A new Brachytherapy QMP was approved and became effective on 1 September 1994. The revised brachytherapy QMP was forwarded to USNRC, Region I, by memorandum dated 15 September 1994, subject: QMP Revision.

ML 10

NOV -7: 1994

Since the QMP has been completely revised from the document that was reviewed, request that the NRC review the current QMP for WRAMC to meet the objectives of 10 CFR 35.32. A copy of our current QMP is enclosed. The point of contact for questions regarding this submittal is the undersigned at 301 427-5104.

BRACHYTHERAPY QUALITY MANAGEMENT PROGRAM SOP

Quality Management Program Ι.

The five objectives which this program aims to achieve with high confidence are:

- 1. Written directive given prior to administration.
- Patient I.D. verified by more than one method. 2.
- Final plan of treatment and dosinetry calculations 3.
- are in accordance with the written directive.
- Source loading, prior to implantation, in accordance with written directive. 4.
- Any unintended deviation from the written directive 5. is identified, evaluated, and appropriate action taken.

Periodic review of the QMP includes:

- All misadministrations. 1.
- All recordable events. 2.
- 3. All brachytherapy procedures.
- Proquency of review at least annually. 4.
- 5. Retain records for three years.

II. ONP for Brachytherapy

- Written Directive -- A written directive must be signed λ. and dated by the authorized user prior to administration of the brachytherapy dose. This must include:
 - Name of patient. 1.
 - 2. Radionuclide.
 - 3. Treatment site.
 - 4. Applicator.
 - 5. Cumulative dose and anatomical dose point.
- В. Oral Directives -- Oral directives will generally not be issued. However, if an oral directive is given to modify a written directive, then the recommendations for documentation as specified in NRC Guide 8.33 will be followed.
- C. Dosinstry Plan -- A (Computer) dosinstry plan must be accepted by the authorized user prior to implantation. This plan must include:
 - 1. Radiographic localization of sources (either actual or dummy) as the basis for verifying position of the sources and for calculating exposure time (or total dose).
 - Listing of source information, including 2. radionuclide, position, and strength.
 - Dose or dose rate at selected anatomical points. 3.
 - Initials and date of the authorized user. 4.

Source Loading -- The individual loading the sources into the applicator (before implantation) must document the exact distribution and identity of the sources in the applicator. He must also check for consistency of:

1. Physical loading of sources in applicator 2. Dosimetry plan, and

3. Written directive.

A single-page form (see attached) will be used for this purpose, i.e., for ensuring consistency of the written directive, the dosimetry plan, and the actual loading of the sources in the applicator. The form requires the signature of the physician both before and after implantation, as well as the individual who loads the sources into the applicator.

Patient Identity -- The user and/or his designed will verify the patient's identity by asking his name and confirming the name and at least one of the following with the patient's record:

- 1. Birth date
- 2. Social security number
- 3. Address
- 4. Signature
- 5. ID bracelet
- 6. Hospital ID card
- 7. Military ID card.

The method of secondary identification will be documented.

F. Questions About Procedure -- The worker (e.g., technologist, dosimetrist, physicist) shall be encouraged to ask questions if there is any confusion or uncertainty regarding the datails of the procedure, and will be instructed to not proceed if any discrepancy is noted.

G. Records -- Records generated by the QMP's procedures will be retained for a period of five years.

III. Annual Review

D.

z.

- A. Methodology of review -- A review of the QM program will be conducted at least annually and will include ALL brachytherapy procedures done during the review pariod. The annual review will be conducted by a committee or designated individual such that an authorized user reviews his/her own procedures. Specifically, the review will include verification of the following:
 - 1. Prior to implantation:
 - a. Radionuclide
 - b. Number of sources
 - c. Source strengths
 - d. Treatment site

- 2. After implantation but prior to completion of procedure:
 - a. Radionuclide
 - b. Total source strangth
 - c. Treatment site

- d. Exposure time (or equivalently, total doce);
- Misadministrations -- The review will include all misadministrations and corrective actions taken.
- C. Recordable events -- The review will include all recordable events and corrective actions taken.
- D. Recommendations -- The existing ON program's policies and procedures will be reevaluated for effectiveness following the annual review. Actions which are required to make the program more effective will be identified in writing as part of the review.
- E. Revisions to the QMP Revisions to the QMP following the annual review will be submitted to the facility Radiation Safety Officer for subsequent submittal to the NRC regional office.
 - Records of Annual Review -- Records of the annual review, migadministrations, and recordable events will be retained as required by 10 CFR Part 35. The Chief Medical Physicist will be responsible for maintaining these records in an auditable form.

#### QUALITY MANAGEMENT

- I. Quality Management Program, WRAMC Nuclear Medicine Service
  - A. The five objectives are:
    - 1. Written directive given prior to administration.
    - 2. Patient I.D. verified by more than one method.
    - 3. Final plans of treatment and calculations are in accordance with written directives.
    - 4. Each administration in accordance with written directives.
    - 5. Any unintended deviation from written directives is I.D.'d, evaluated, and appropriate action is taken.
  - B. Develop procedures for and conduct a review of the QMP including:
    - 1. All misadministration.
    - 2. All recordable events.
    - 3. A sampling of patient administrations... at intervals no greater than 12 months.
      - 4. Retain records for three years.
- II. Radiopharmaceutical QMP
  - C. For all Radiopharmaceutical Therapies and Diagnostic Iodine 131 & 125; Iodine MIBG & NP59; Strontium-89 Chloride, and Phosphorus-32 IV.
    - Authorized user Sign and date written directive (Radiopharmaceutical, Dosage, Route of Administration) before administration. (Delays, oral directives and revisions OK under certain circumstances. 10 CFR 35.32(a)(1).).
    - 2. User and/or Designee verify patient identity by more than one method:
      - a) Ask patient name, confirm, and,
      - b) Birth date, or
      - c) Social security number, or
      - d) Address, or
      - e) Signature, or
      - f) ID Bracelet, or
      - g) Hospital ID card, or
      - h) Military ID card.

#### II. Radiopharmaceutical QMP cont.

(. ; )

- 3. Person administering dose verify details of administration:
  - a) Radiopharmaceutical
  - b) Dose
  - c) Route of Administration
- 4. Encourage worker to ask questions.
- 5. User or supervised person date and sign/initial written record (chart).

\*\*See enclosure Radiopharmaceutical Administration Checklist\*\*

III. Annual Review

- 6. At least annually the QMP review will consist of:
  - a) Random Sample of therapies representative of the following patient administrations:

| Lot size | Sample size | Acceptance<br>No. |  |
|----------|-------------|-------------------|--|
| 20       | ALL         | 0                 |  |
| 21 - 100 | 20          | 0                 |  |
| >100     | 20%         | 0                 |  |

b) All misadministration

c) All recordable events.

For each patient case, compare administered vs. prescribed for

- a) Written directive complete
- b) Patient identity verified
  - c) Radiopharmaceutical
- d) Dose
- e) Route of administration

#### RADIOPHARMACEUTICAL ADMINISTRATION CHECKLIST

(To be filled out by individuals administering a therapeutic dosage of any radiopharmaceutical other than sodium iodine I-125 or I-131 (SR-89 MIBG, NP-59, P-32), or any dosage greater than 30 microcuries of sodium iodide I-125 or I-131).

PLACE RADIOPHARMACEUTICAL STICKER HERE

DIRECTIONS: Complete the items below in the order listed, and initial each item when completed. If you do not fully understand how to carry out the written directive (PRESCRIPTION/CONSENT FORM) for this administration, halt the procedure and contact the Chief, Nuclear Medicine Service, or other authorized user immediately.

#### PART I - BEFORE ADMINISTRATION

| Attach a game of the written directive (PRESCRIDETON/CONSENT FORM)                                                                                                                                                                                                                                                                        |          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| for the dosage prepared.                                                                                                                                                                                                                                                                                                                  | initials |
| The written directive (PRESCRIPTION/CONSENT FORM) is signed and dated by an authorized user.                                                                                                                                                                                                                                              | initials |
| The patient's identity checked verbally and confirmed as the individual<br>named in the written directive (PRESCRIPTION/CONSENT FORM) by comparison<br>with corresponding information in the patient's record using at least one<br>of the following means of identification.<br>(Listed in order of preference. Check applicable means.) | initials |
| <pre>1Military ID card 2Name on the patient's ID bracelet 3Drivers license photo 4Other (SSANBirth dateAddressSignature)</pre>                                                                                                                                                                                                            |          |
| The radiopharmaceutical to be administered is the same as that identified on the written directive (PRESCRIPTION/CONSENT FORM).                                                                                                                                                                                                           | initials |
| Route of administration (circle): I.V. I.M. P.O. Other(what?)                                                                                                                                                                                                                                                                             |          |
| The dosage to be administered is the same as that identified on the written directive (PRESCRIPTION/CONSENT FORM).                                                                                                                                                                                                                        | initials |
| Laboratory test results (Beta HCG, TSH, CBC, etc) have been reviewed.                                                                                                                                                                                                                                                                     | initials |
| PART II - AFTER ADMINISTRATION                                                                                                                                                                                                                                                                                                            |          |
| Date and time of dose administration:                                                                                                                                                                                                                                                                                                     |          |
| Record, date, and initial the administered dosage on the patients's consult, and place in the Nuclear Medicine Folder.                                                                                                                                                                                                                    | initials |
| REVIEWED BY (AUTHORIZED USER):                                                                                                                                                                                                                                                                                                            |          |

ATTN: LTC ARTHUR G. SAMILJAN,

RE: Docket Number: 030-01317 License Number: 08-01738-02 Plan File Date: 27-JAN-92 Region Number: 1

#### Dear Mr. Samiljan:

This refers to the review of your written Quality Management Program (QMP) submitted in accordance with 10 CFR 35.32. A review of the QMP was performed to determine whether policies and procedures have been developed to meet the objectives of the rule. Based on this submission, there appear to be significant weaknesses and potential substantial failure of your QMP to meet the objectives in 10 CFR 35.32 in that:

#### Regarding Brachytherapy

- 1 A written QMP must be established and maintained for each Brachytherapy use as required in 10 CFR 35.32(f)(1). Please submit your QMP for your Brachytherapy program.
- 2 Please be advised that multiple misadministrations and other errors have occurred due to sources that are inaccurately placed or have moved. In addition, wrong organs have been irradiated as a result of unintentional and undetected movement of the source, once implanted. Each licensee should review their procedures to ensure that source positions are verified and frequently checked.

Regarding I-125 and /or I-131 > 30 microcuries

1 A written QMP must be established and maintained for each I-125 and /or I-131 > 30 microcuries use as required in 10 CFR 35.32(f)(1). Please provide your QMP for your NaI I-125 or I-131 >30 microcuries. Regarding Therapeutic Radiopharmaceutical other than I-125 and/or I-131

1 A written QMP must be established and maintained for use of Radiopharmaceuticals for therapy other than I-125 and I-131 as required in 10 CFR35.32(f)(1). Please submit your QMP for your Radiopharmaceutical therapy.

To meet the requirements in 10 CFR 35.32, you may choose to utilize the procedures described in Regulatory Guide 8.33(enclosed), or submit procedures that are equivalent. If you choose to use Regulatory Guide 8.33, be certain that the procedures you select are adjusted to meet the specific needs of your program as necessary. Additionally, you are reminded that training and/or instruction of supervised individuals in your QMP is required by 10 CFR 35.25.

Due to the apparent failure of your written QMP to meet the objectives in 10 CFR 35.32, you must immediately modify your written QMP to address the items listed above, and provide those modifications to your NRC regional office within 30 days of the date of this letter. NRC will review these matters during your next routine NRC inspection to determine whether violations of NRC requirements have occurred. Enforcement action may be taken at that time for failure to meet the requirements of 10 CFR 35.32.

Please be advised that this QMP will not be incorporated into your license by condition. This allows you the flexibility to make changes to your quality management program without obtaining prior NRC approval. When modifications are made to your program, You should submit any changes to your QMP to this Office within 30 days as required by 10 CFR 35.32(e).

Your QMP was reviewed by an NRC contractor following a standard review plan and related checklist provided by the NRC staff. This letter outlining the findings of that review was prepared by the contractor utilizing standard paragraphs previously reviewed and approved by NRC headquarters and regional management. If you have any questions about this review, you may call me at (610)337-5309. Thank you for your cooperation in this matter.

Sincerely,

James P. Dwyer Quality Management Program Coordinator Region I

TTENTION OF:

030-01317

SUBJECT: Quality Management Program (QMP) Revision

Nuclear Materials Safety Branch Division of Radiation Safety and Safeguards ATTENTION: QMP Coordinator U.S. Nuclear Regulatory Commission, Region I 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Dear QMP Coordinator

Walter Reed Army Medical Center uses radioactive material authorized by US Nuclear Regulatory Commission Byproduct Material License Number 08-01738-02 with an expiration date of June 30, 1999. This a medical broadscope Type A license for human use and research.

The Radiation Oncology Service has just completed a comprehensive review and total revision of the Brachytherapy Quality Management Program SOP. The new Brachytherapy QMP was approved and became effective September 1, 1994. Please note that the Radiopharmaceutical QMP, dated 22 March 1994, has not been changed. This revision only effects the Brachytherapy QMP.

The Brachytherapy QMP and supporting forms are submitted as required by 10 CFR 35.32(e). If you have any questions regarding this submittal, please contact the undersigned at 301 427-5104.

WILLIAM B. JOHNSON Lieutenant Colonel, U.S. Army Chief, Health Physics Office

#### BRACHYTHERAPY QUALITY MANAGEMENT PROGRAM SOP

- I. Quality Management Program
  - The five objectives which this program aims to achieve λ... with high confidence are:
    - Written directive given prior to administration. 1.
    - Patient I.D. verified by more than one method. 2.
    - Final plan of treatment and dosimetry calculations 3.
    - are in accordance with the written directive. Source loading, prior to implantation, in accordance with written directive. 4.
    - Any unintended deviation from the written directive 5. is identified, evaluated, and appropriate action taken.

Periodic review of the OMP includes: B.

- 1. All misadministrations.
- All recordable events. 2.
- All brachytherapy procedures. 3.
- 4. Prequency of review at least annually.
- Retain records for three years. 5.

#### I. II. **GUP** for Brachytherapy

- Written Directive -- A written directive must be signed λ. and dated by the authorized user prior to administration of the brachytherapy dose. This must include:
  - Name of patient. 1.
  - 2. Radionuclide.
  - 3. Treatment site.
  - 4. Applicator.
  - 5. Cumulative dose and anatomical dose point.
- Oral Directives -- Oral directives will generally not be В. issued. However, if an oral directive is given to modify a written directive, then the recommendations for documentation as specified in NRC Guide 8.33 will be followed.
- Dosimetry Plan -- A (computer) desimetry plan must be C. accepted by the authorized user prior to implantation. This plan must include:
  - Radiographic localization of sources (either actual 1. or dummy) as the basis for verifying position of the sources and for calculating exposure time (or total dose).
  - Listing of source information, including 2. radionuclide, position, and strength.
  - Dose or dose rate at selected anatomical points. 3.
  - Initials and date of the authorized user. 4.

のないと、「「「「「「「「「」」」」」

all - I - Care And Constants

Source Loading --- The individual loading the sources into the applicator (before implantation) must document the exact distribution and identity of the sources in the applicator. He must also check for consistency of:

1. Physical loading of sources in applicator

- 2. Dosimetry plan, and
- 3. Written directive.

A single-page form (see attached) will be used for this purpose, i.e., for ensuring consistency of the written directive, the dosimetry plan, and the actual loading of the sources in the applicator. The form requires the signature of the physician both before and after implantation, as well as the individual who loads the sources into the applicator.

Patient Identity -- The user and/or his designee will verify the patient's identity by asking his name and confirming the name and at least one of the following with the patient's record:

- 1. Birth date
- 2. Social security number
- 3. Address
- 4. Signature
- 5. ID bracelet
- 6. Hospital ID card
  - 7. Military ID card.

The method of secondary identification will be documented.

- F. Questions About Procedure -- The worker (e.g., technologist, dosimetrist, physicist) shall be encouraged to ask questions if there is any confusion or uncertainty regarding the datails of the procedure, and will be instructed to not proceed if any discrepancy is noted.
- G. Records -- Records generated by the QMP's procedures will be retained for a period of five years.

#### III. Annual Review

- A. Methodology of review -- A review of the QM program will be conducted at least annually and will include ALL brachytherapy procedures done during the review period. The annual review will be conducted by a committee or designated individual such that an authorized user reviews his/her own procedures. Specifically, the review will include verification of the following:
  - 1. Prior to implantation:
    - a. Radionuclide
    - b. Number of sources
    - c. Source strengths
    - d. Treatment site

- 2. After implantation but prior to completion of procedure:
  - a. Radionuclide
  - b. Total source strength
  - c. Treatment site
  - d. Exposure time (or equivalently, total dose);
- Misadministrations -- The review will include all misadministrations and corrective actions taken.
- C. Recordable events -- The review will include all recordable events and corrective actions taken.
- D. Recommendations -- The existing QN program's policies and procedures will be reevaluated for effectiveness following the annual review. Actions which are required to make the program more effective will be identified in writing as part of the review.
- E. Revisions to the QMP Revisions to the QMP following the annual review will be submitted to the facility Radiation Safety Officer for subsequent submittel to the NRC regional office.
- F. Records of Annual Review -- Records of the annual review, misadministrations, and recordable events will be retained as required by 10 CFR Part 35. The Chief Medical Physicist will be responsible for maintaining these records in an auditable form.

TANKAR I

3.

-

Written directives for brachytherapy, other than high-dose-rate remote afterloading brachytherapy, as defined in 10CFR35.2, must include: the radioisotope, number of sources, and source strengths; and after implantation, but prior to completion of the procedure: the radioisotope, treatment site, and total source strength and exposure time (or, equivalently, the total dose). Your QMP must include a written policy/procedure which requires that any written directives for brachytherapy doses will include all treatment parameters prior to administration. Your QMP is missing procedures to require that the written directive include:

(a)Order for a specific patient.

(b)Dated and signature of authorized user

(c)Prior to implantation:

(d) the radioisotope,

(c) number of sources,(f) source strengths;.

(g)After implantation, but prior to completion of the procedure:

(h) the radioisotope,

(i) treatment site,

(i) total source strength and exposure time (or, equivalently, the total dose)

60. Documentation of oral revisions and oral directives:

a. Policies/Procedures for documentation of oral revisions to existing written directive signed and dated by an a.u. or physician under the supervision of an a.u. <u>within 48 hours of</u> the oral revision

A footnote to 10 CFR 35.32(a)(1) provides that an oral revision to a written directive is acceptable if, because of the patient's condition, a delay in order to provide a written revision to an existing written directive would jeopardize the patient's health. Oral revisions must be documented immediately in the patient's record and a revised written directive must be signed and dated by an authorized user or physician under the supervision of an authorized user within 48 hours of the oral revision. Please include such a policy in your QMP.

b. If, a delay in order to provide a written directive would jeopardize the patients health, an oral directive will be acceptable, provided that information is documented immediately in the patient's record and a written directive is prepared within 24 hours of the oral directive. Please include such a provision in your QMP

If, because of the emergent nature of the patient's condition, a delay in order to provide a written directive would jeopardize the patients health, an oral directive will be acceptable, provided that the information provided in the oral directive is documented immediately in the patient's record and a written directive is prepared within 24 hours of the oral directive.

61. Revisions to written directives dated and signed by a.u. <u>prior to</u> <u>administration</u> of brachytherapy dose or next fraction of brachytherapy dose

Revisions to written directives for brachytherapy may be made provided that the revision is dated and signed by an authorized user prior to the administration of the brachytherapy dose or the next brachytherapy fractional dose. Your QMP must include a policy/procedure that requires that revisions to written directives will be made <u>prior</u> to administration of the brachytherapy dose or next fractional brachytherapy dose.

# OBJECTIVE 2 - PATIENT IDENTITY VERIFICATION [10 CFR 35.32 (a)(2)]

62. Procedure to verify patient's identity by more than one method prior to administration

Procedures to verify the patient's identity by more than one method prior to administration, as required by 10 CFR 35.32(a)(2) have not been adequately addressed

December 6, 1993

Brachytherapy

in your QMP. Your QMP must include a policy/procedure to require that, prior to each Brachytherapy administration, the patient's identity will be verified by more than one method as the individual named in the written directive as required by 10 CFR 35.32(a)(2).

## OBJECTIVE 3 - TREATMENT PLANS VERIFICATION (NOT APPLICABLE TO RADIOPHARMACEUTICAL THERAPY)

- 63. For brachytherapy other than high-dose-rate remote afterloaders:
- a. a plan of treatment will be prepared in accordance with the respective written directive.
- b. procedures for performing a check of dose calculations (i.e., computer-generated dose calculations and/or manual dose calculations). Dose calculations checked by an authorized user or a qualified person under the supervision of an authorized user (e.g., a radiation therapy physicist, oncology physician, dosimetrist, or radiation therapy technologist), who whenever possible did not make the original calculations.
- c. verification of the position of dummy sources or fixed geometry applicators prior to inserting sealed sources
- d. performance of acceptance testing on each treatment planning or dose calculating computer program that could be used for dose calculations, and checking computer generated dose calculations

Your submittal does not include policies/procedures that ensure that final plans of treatment and related calculations for brachytherapy are in accordance with the written directive as required by 10 CFR 35.32(a)(3). Your procedures should require that:

- a. a plan of treatment will be prepared in accordance with the respective written directive.
- b. procedures for performing a check of dose calculations (i.e., computer-generated dose calculations and/or manual dose calculations) are prepared. Procedures for checking the dose calculations before administration of the prescribed brachytherapy dose. An authorized user or a qualified person under the supervision of an authorized user (e.g., a radiation therapy physicist, oncology physician, dosimetrist, or radiation therapy technologist), who whenever possible did not make the original calculations, should check the dose calculations.
- c. verification of the position of dummy sources or fixed geometry applicators prior to inserting sealed sources, is accomplished
- d. acceptance testing on each treatment planning or dose calculating computer program that could be used for dose calculations, and checking computer generated dose calculations is performed.

**OBJECTIVE 4 - VERIFICATION PRIOR TO ADMINISTRATION TO WRIT** DIRECTIVE [10 CFR 35.32(a)(4)]

64a. Procedures to ensure, before administration, that each administration is in accordance with the written directive.

## EVALUATION AND RESPONSE TO RECORDABLE EVENTS [10 CFR 35,32(c)]

68b. Commitment for evaluation and response to each recordable event by: (i) assembling the relevant facts including the cause; (ii) identifying what, if any, corrective action is required to prevent recurrence; and (iii) retaining a record, in an auditable form, for three years, of the relevant facts and what corrective action was taken.

As required in 10 CFR35.32(c), the licensee shall evaluate and respond, within 30 days after discovery of the recordable event, to each recordable event by:(i) assembling the relevant facts including the cause; (ii) identifying what, if any, corrective action is required to prevent recurrence; and (iii) retaining a record, in an auditable form, for three years, of the relevant facts and what corrective action was taken.

# PERIODIC REVIEWS OF THE OM PROGRAM [10 CFR 35.32(b)]

69. Time intervals (intervals not to exceed 12 months)

Your submittal for Brachytherapy does not provide adequate procedures to conduct periodic reviews of your QMP as required by 10 CFR 35.32(b). You must include the time intervals for your reviews These reviews should be conducted at intervals no greater than 12 months.

70. Review includes an evaluation of acceptable representative sample of all patient administrations, all recordable events, and misadministrations

Your QMP review does not provide an evaluation of (i) an adequate representative sample of patient administrations (ii) all recordable events, and (iii) all misadministrations since the last review as required in 10 CFR 35.32(b)(1). The number of patient cases to be sampled should be based on the principles of statistical acceptance sampling and should represent each modality performed in the institution (e.g., radiopharmaceutical, teletherapy, brachytherapy, and gamma stereotactic radiosurgery). You may develop a sampling procedure of your own; use the chart provided in 10 CFR 32.110 (assuming an error rate of 2 percent); or a representative sample may be selected including (at a minimum): 20% if the number of cases performed is greater than 100, 20 cases if the number of cases is between 20 and 100, and all, if the number of cases is less than 20.) Provide a copy of your revised QMP to include this provision.

71. Includes procedure to expand review if recordable events or misadministration is uncovered during the periodic review of your QMP.

According to guidance provided by Regulatory Guide 8.33, your QMP should include a procedure to expand the number of cases reviewed when a misadministration or recordable event is uncovered during the periodic review of your QMP. Please include this provision in your QMP.

72. Procedures for determining the effectiveness of the QM program and, if necessary, making modifications to meet the objectives of the program

Describe your procedures to evaluate the effectiveness of the QMP, and, if necessary, to make modifications to meet the objectives of the program as required by 10 CFR 35.32(b)(2).

Quality Management Program for I-125 and/or I-131 > 30uCi A written QMP for I-125 and/or I-131>30 uCi was provided. YES 75. NO (3e) A written QMP must be established and maintained for each I-125 and/or I-131>uCi use as required in 10 CFR 35.32(f)(1). Please provide your QMP for your NaI I-125 or I-131 >30 microCi. YES 76. Written certification that QM program has been implemented NO (4) Each applicable Part 35 licensee is required to submit a written certification that their QMP has been implemented along with a copy of their plan, pursuant to 10 CFR 35.32(f)(2). Please provide written certification that your QMP has been implemented. OBJECTIVE 1 - WRITTEN DIRECTIVE [10 CFR 35.32(a)(1)] NO (7) YES 77a. A written directive is prepared for administration of greater than 30 uCi of I-125 and/or I-131 The preparation of written directives prior to the administration of quantities greater than 30 microcuries of either sodium iodide I-125 or I-131 is required by 10 CFR 35.32(a)(1). Your QMP must include a written policy that requires that such a written directive be prepared prior to each patient administration. The QMP provides procedures to require that the written directive include: YES /NO (8a) 77b. an order for a specific patient..... 77c. date and signature of authorized user..... YES NO (8b) dosage to be administered..... YES NO (8c) 77d.

The written directive must be an order for a specific patient, dated and signed by an authorized user or physician under the supervision of an authorized user, and, for any administration of quantities greater than 30 microcuries of either I-125 or I-131, the dosage. Your QMP is missing procedures to require that the written directive for I-125 and/or I-131>30 uCi:

- (a) be an order for a specific patient(b) is dated and signed by the authorized user
- (c) contains the dosage to be administered.
- 78. Documentation of oral revisions and oral directives:
- a. Documentation of oral revisions to existing written directive signed and dated by an a.u. or physician under the supervision of an a.u. within 48 hours of the oral revision

A footnote to 10 CFR 35.32(a)(1) provides that an oral revision to a written directive is acceptable if, because of the patient's condition, a delay in order to provide a written revision to an existing written directive would jeopardize the patient's health. Oral revisions must be documented immediately in the patient's record and a revised written directive must be signed and dated by an authorized user or physician under the supervision of an authorized user within 48 hours of the oral revision. Please include such a policy in your QMP.

YES

NO (18a)

NO (18b) YES If, a delay in order to provide a written directive would b. . jeopardize the patients health, an oral directive will be acceptable, provided that information is documented immediately in the patient's record and a written directive is prepared within 24 hours of the oral directive. Please include such a provision in your QMP If, because of the emergent nature of the patient's condition, a delay in order to provide a written directive would jeopardize the patients health, an oral directive will be acceptable, provided that the information provided in the oral directive is documented immediately in the patient's record and a written directive is prepared within 24 hours of the oral directive. 79. Revisions to written directives dated and signed by a.u. prior to YES NO (19) administration of a radiopharmaceutical dosage Revisions to written directives may be made for any diagnostic or therapeutic procedure provided that the revision is dated and signed by an authorized user prior to the administration of the radiopharmaceutical dosage. Your QMP must include a policy/procedure that requires that revisions to written directives will be made prior to administration. OBJECTIVE 2 - PATIENT IDENTITY VERIFICATION [10 CFR 35.32 (a)(2)] Procedure to verify patient's identity by more than one 80. YES \_ NO (23e) method prior to administration Procedures to verify the patient's identity by more than one method prior to administration, as required by 10 CFR 35.32(a)(2) have not been adequately addressed in your QMP. Your QMP must include a policy/procedure to require that, prior to each NaI I-125 or I-131 >30 microCi administration, the patient's identity will be verified by more than one method as the individual named in the written directive as required by 10 CFR 35.32(a)(2) 10 CFR 35.32(a)(2). **OBJECTIVE 3 - TREATMENT PLANS VERIFICATION (NOT APPLICABLE TO** RADIOPHARMACEUTICAL ADMINISTRATION) **OBJECTIVE 4 - VERIFICATION PRIOR TO ADMINISTRATION TO WRITTEN DIRECTIVE** [10 CFR 35.32(a)(4)] Procedures to ensure, before administration, that each 81a. YES NO (27a) administration is in accordance with the written directive. Your submittal for I-125 and/or I-131 > 30uCi administration does not include policies/procedures that ensure that each administration is in accordance with the written directive as required by 10 CFR 35.32(a)(4). Describe your policy/procedure to verify, before administering the byproduct material, that the specific details of the administration are in accordance with the written directive. 81b. For I-125 and/or I-131 > 30uCi: YES NO (27b) 10,8-2. Dosage measured in dose calibrator and results compared with the prescribed dosage in the written directive

According to guidance provided by Regulatory Guide 8.33, the dosage, should be confirmed by the person administering the radiopharmaceutical to verify agreement with the written directive, that is, the dosage should be measured in the dose calibrator and the results compared with the prescribed dosage in the written directive. Please provide such (or similar) procedures in your QMP.

December 6, 1993

I-125 and/or I-131 >30uCi

Commitment for all workers to seek guidance if they do not YES NO (31) ·82: understand how to carry out the written directive Your QMP must include a policy for instruction of all workers to seek guidance if they do not understand how to carry out the written directive. Please include such a provision in your QMP. YES XNO (32) 83. A written directive and records of each administered I-125 and/or I-131>30 uCi must be maintained for three years. A commitment to retain each written directive and a record of each administered radiopharmaceutical dosage for three years after the date of administration is required in 10 CFR 35.32(d). Describe the procedure for an authorized user or a qualified individual under the supervision of an authorized user (e.g., a nuclear medicine physician, physicist, or technologist), after administering a radiopharmaceutical, to make, date, sign or initial a written record that documents the administered dosage in an auditable form. OBJECTIVE 5 - UNINTENDED DEVIATIONS [10 CFR 35.32(a)(5)] YES // NO (34e) 84. Policies/Procedures for identification and evaluation of unintended deviations from the written directive Your QMP for NaI I-125 or I-131 >30 microCi must include policies/procedures to identify and evaluate any unintended deviations from a written directive and to institute corrective actions to be taken after the deviation has been identified as required by 10 CFR 35.32(a)(5). Please include such a provision in your QMP. YES NO (35) Institution of corrective actions to be taken after the deviation 85a. has been identified Your QMP must include policies/procedures to institute corrective actions to be taken after an unintended deviation has been identified. EVALUATION AND RESPONSE TO RECORDABLE EVENTS [10 CFR 35.32(c)] YES X NO (1) 85b. Commitment for evaluation and response to each recordable event by: (i) assembling the relevant facts including the cause; (ii) identifying what, if any, corrective action is required to prevent recurrence; and (iii) retaining a record, in an auditable form, for three years, of the relevant facts and what corrective action was taken. As required in 10 CFR35.32(c), the licensee shall evaluate and respond, within 30 days after discovery of the recordable event, to each recordable event by:(i) assembling the relevant facts including the cause; (ii) identifying what, if any, corrective action is required to prevent recurrence; and (iii) retaining a record, in an auditable form, for three years, of the relevant facts and what corrective action was taken. PERIODIC REVIEWS OF THE OM PROGRAM [10 CFR 35.32(b)] YES NO (36e) 86. Time intervals (intervals not to exceed 12 months) Your submittal for NaI I-125 or I-131 >30 microCi does not provide adequate procedures to conduct periodic reviews of your QMP as required by 10 CFR 35.32(b). You must include the time intervals for your reviews. These reviews should be conducted at intervals no greater than 12 months.

#### QUALITY MANAGEMENT

- I. Quality Management Program, WRAMC Nuclear Medicine Service
  - A. The five objectives are:
    - 1. Written directive given prior to administration.
    - 2. Patient I.D. verified by more than one method.
    - 3. Final plans of treatment and calculations are in accordance with written directives.
    - 4. Each administration in accordance with written directives.
    - 5. Any unintended deviation from written directives is I.D.'d, evaluated, and appropriate action is taken.
  - B. Develop procedures for and conduct a review of the QMP including:
    - 1. All misadministration.
    - 2. All recordable events.
    - 3. A sampling of patient administrations... at intervals no greater than 12 months.
    - 4. Retain records for three years.
- II. Radiopharmaceutical QMP
  - C. For all Radiopharmaceutical Therapies and Diagnostic Iodine 131 & 125; Iodine MIBG & NP59; Strontium-89 Chloride, and Phosphorus-32 IV.
    - Authorized user Sign and date written directive (Radiopharmaceutical, Dosage, Route of Administration) before administration. (Delays, oral directives and revisions OK under certain circumstances. 10 CFR 35.32(a)(1).).
    - 2. User and/or Designee verify patient identity by more than one method:
      - a) Ask patient name, confirm, and,
      - b) Birth date, or
      - c) Social security number, or
      - d) Address, or
      - e) Signature, or
      - f) ID Bracelet, or
      - g) Hospital ID card, or
      - h) Military ID card.

Encl 2

#### JUN D 6 1994

(1)

- 3. Person administering dose verify details of administration:
  - a) Radiopharmaceutical
  - b) Dose
  - c) Route of Administration
- 4. Encourage worker to ask questions.
- 5. User or supervised person date and sign/initial written record (chart).

\*\*See enclosure Radiopharmaceutical Administration Checklist\*\*

#### III. Annual Review

- 6. At least annually the QMP review will consist of:
  - a) Random Sample of therapies representative of the following patient administrations:

| Lot size | Sample size | Acceptance<br>No. |
|----------|-------------|-------------------|
| 20       | ALL         | 0                 |
| 21 - 100 | 20          | 0                 |
| >100     | 20%         | 0                 |

b) All misadministration

c) All recordable events.

For each patient case, compare administered vs. prescribed for

- a) Written directive complete
- b) Patient identity verified
- c) Radiopharmaceutical
- d) Dose
- e) Route of administration

#### RADIOPHARMACEUTICAL ADMINISTRATION CHECKLIST

(To be filled out by individuals administering a therapeutic dosage of any radiopharmaceutical other than sodium iodine I-125 or I-131 (SR-89 MIBG, NP-59, P-32), or any dosage greater than 30 microcuries of sodium iodide I-125 or I-131).

PLACE RADIOPHARMACEUTICAL STICKER HERE

DIRECTIONS: Complete the items below in the order listed, and initial each item when completed. If you do not fully understand how to carry out the written directive (PRESCRIPTION/CONSENT FORM) for this administration, halt the procedure and contact the Chief, Nuclear Medicine Service, or other authorized user immediately.

(what?)

#### PART I - BEFORE ADMINISTRATION

Attach a copy of the written directive (PRESCRIPTION/CONSENT FORM) for the dosage prepared. The written directive (PRESCRIPTION/CONSENT FORM) is signed and dated by an authorized user. The patient's identity checked verbally and confirmed as the individual named in the written directive (PRESCRIPTION/CONSENT FORM) by comparison with corresponding information in the patient's record using at least one of the following means of identification. (Listed in order of preference. Check applicable means.)

Military ID card
 Name on the patient's ID bracelet
 Drivers license photo
 Other (SSAN Birth date Address Signature)

The radiopharmaceutical to be administered is the same as that identified on the written directive (PRESCRIPTION/CONSENT FORM).

Route of administration (circle): I.V. I.M. P.O. Other

The dosage to be administered is the same as that identified on the written directive (PRESCRIPTION/CONSENT FORM).

Laboratory test results (Beta BCG, TSH, CBC, etc) have been reviewed.

#### PART II - AFTER ADMINISTRATION

Date and time of dose administration:

DATE TIME

Record, date, and initial the administered dosage on the patients's consult, and place in the Nuclear Medicine Folder.

# **QUALITY MANAGEMENT PROGRAM - BRACHYTHERAPY**

(1)

1 1 1

The following is an extract from Chapter 3, the Radiation Oncology Service Policy and Procedure Manual, Walter Reed Army Medical Center.

3.2.7.11 Quality Management Program for WRAMC Radioactive Material Permit Program. The NRC has amended Part 35 of its regulations governing the therapeutic administration of radiation and radioactive material covered by the hospital's WRAMC Radioactive Materials Permit. A complete copy of the affected changes is located in Federal Register, Volume 56, Number 143, of 25 July 1991, pages 34120-34122. These changes affect brachytherapy procedures with Radiation Oncology. The changes effected are summarized here:

- 1. Definitions. In radiation oncology, MISADMINISTRATION means the administration of a brachytherapy radiation dose:
  - a. Involving the wrong patient, wrong radioisotope, or wrong treatment site (excluding, for permanent implants, seeds that were implanted in the correct site but migrated outside the treatment site);
  - b. Involving a sealed source that is leaking;
  - c. When for a temporary implant, one or more sealed sources are not removed upon completion of the procedure; or
  - d. When the calculated administered dose differs from the prescribed dose by more than 20 percent of the prescribed dose.

**RECORDABLE EVENT** means the administration of:

- a. Radiation without a written directive (see definition below) where a written directive is required;
- b. A brachytherapy radiation dose when the calculated administered dose differs from the prescribed dose by more than 10 percent of the prescribed dose.

Encl 3

Extract of the Quality Management Program for Brachytherapy, Chapter 3, Policy & Procedure Manual, Radiation Oncology, WRAMC, September 1993

(1)

WRITTEN DIRECTIVE means an order in writing for a specific patient, dated and signed by an authorized user prior to the administration of radiation, containing the following information:

- a. For high-dose-rate remote afterloading brachytherapy: the radioisotope, treatment site, and total dose; or
- b. For all other brachytherapy:

()()

- (1) Prior to implantation: the radioisotope, number of sources, and source strengths; and
- (2) After implantation but prior to completion of the procedure: the radioisotope, treatment site, and total source strength and exposure time (or, equivalently, the total dose).

ORAL DIRECTIVES AND REVISIONS TO WRITTEN DIRECTIVES: A footnote to 10 CFR 35.32(a)(1) reads as follows:

"If, because of the patient's medical condition, a delay in order to provide a written directive would jeopardize the patient's health, an oral revision to an existing written directive will be acceptable, provided that the oral revision is documented immediately in the patient's record and a revised written directive is dated and signed by the authorized user within 48 hours of the oral directive.

Also, a written revision to an existing written directive may be made for any diagnostic or therapeutic procedure provided that the revision is dated and signed by an authorized user prior to the administration of the radiopharmaceutical dosage, the brachytherapy dose, the gamma stereotactic radiosurgery dose, the teletherapy dose or the next teletherapy fractional dose. Extract of the Quality Management Program for Brachytherapy, Chapter 3, Policy & Procedure Manual, Radiation Oncology, WRAMC, September 1993

i ) i )

1111

If, because of the emergent nature of the patient's medical condition, a delay in order to provide a written directive would jeopardize the patient's health and oral directive will be acceptable, provided that the information contained in the oral directive is documented immediately in the patient's record and a written directive is prepared within 24 hours of the oral directive."

3.2.7.12 QUALITY MANAGEMENT PROGRAM. Major aspects of the Brachytherapy Quality Management Program a WRAMC includes:

- a. A written directive is required for and must be written prior to any brachytherapy radiation dose.
- b. Prior to each administration the patient's identity must be verified by more than one method as the individual named in the written directive.
- c. All workers must seek guidance if they do not understand how to carry out the written directive.
- d. Final plans of treatment and related calculations for brachytherapy must be in accordance with the respective written directive.
- e. Each administration must be in accordance with the written directive.
- f. For temporary and permanent implants radiographs or other comparable images (e.g. CT) of the brachytherapy radioactive sources (or dummies) shall be obtained for verifying the position of the sources and calculation of dose. This may not be necessary for fixed geometry applicators (e.g., templates).

3

Extract of the Quality Management Program for Brachytherapy, Chapter 3, Policy & Procedure Manual, Radiation Oncology, WRAMC, September 1993

g. The authorized user will promptly record in the patient's chart the actual loading sequence of the radioactive sources implanted.

111

- h. After insertion of the brachytherapy sources but prior to completion of the procedure, the authorized user will enter in the patient's record the radioisotope, treatment site, and total source strength and exposure time (or, equivalently, the total dose).
- i. Within 24-hours of the implant or before the total prescribed brachytherapy dose has been administered, computer and manual calculation shall be checked.
- j. Any unintended deviation from the written directive must be identified and evaluated as a recordable event or misadministration. An investigation and evaluation with the division is required and recommendations for corrective action will be implemented. Appropriate action must be taken. A summary of evaluation will be presented to the quarterly meeting of the Radiation Control Committee. A copy of the evaluation of recordable events will be sent within thirty days to Health Services Command.
- k. A review of the quality management program must be conducted at intervals no greater than 12 months.

Quality Management Program for Therapeutic Radiopharmaceutical other than I-125 or I-131 A written QMP for Therapeutic Radiopharmaceutical other YES 📉 NO (3f) 92. than I-125 or I-131 was provided. A written QMP must be established and maintained for Radiopharmaceutical use as required in 10 CFR 35.32(f)(1). Please submit your QMP for your Radiopharmaceutical therapy. YES \_ NO (4) 93. Written certification that QM program has been implemented Each applicable Part 35 licensee is required to submit a written certification that their QMP has been implemented along with a copy of their plan, pursuant to 10 CFR 35.32.f)(2). Please provide written certification that your QMP has been implemented. OBJECTIVE 1 - WRITTEN DIRECTIVE [10 CFR 35.32(a)(1)] YES NO (9) A written directive is prepared for administration of 94a. therapeutic radiopharmaceutical other than I-125 and/or I-131 10 CFR 35.32(a)(1) requires a QMP to include policies and procedures for the preparation of a written directive, prior to the administration of any therapeutic iadiopharmaceutical, other than sodium iodide I-125 or I-131. Please provide such a policy in your QMP. The QMP provides procedures to require that the written directive include: Radiopharmaceutical..... YES 94b. NO (10a) 94c. YES NO (10b) Dosage..... Route of administration..... 94d. YES NO (10c) YES \_NO (10d) Order for a specific patient..... 94e. 94f. Dated and signed by authorized user..... YES NO (10e) The written directive must be an order for a specific patient, dated and signed by an authorized user or physician under the supervision of an authorized user, and, for a therapeutic use of a radiopharmaceutical other than I-125 or I-131, the radiopharmaceutical, dosage, and route of administration. Your QMP is missing procedures to require that the written directive for therapeutic radiopharmaceutical other than I-125 and/or I-131 include: (a) Radiopharmaceutical (b) Dosage (c) Route of administration (d) Order for a specific patient (e) Date and signed by authorized user

Therapeutic Radiopharmaceutical other than I-125 or I-131

95. Documentation of oral revisions and oral directives: YES ¥ NO (18a) Policies/Procedures for documentation of oral revisions to a. existing written directive signed and dated by an a.u. or physician under the supervision of an a.u. within 48 hours of the oral revision A footnote to 10 CFR 35.32(a)(1) provides that an oral revision to a written directive is acceptable if, because of the patient's condition, a delay in order to provide a written revision to an existing written directive would jeopardize the patient's health. Oral revisions must be documented immediately in the patient's record and a revised written directive must be signed and dated by an authorized user or physician under the supervision of an authorized user within 48 hours of the oral revision. Please include such a policy in your OMP. b. If, a delay in order to provide a written directive would NO (18b) jeopardize the patients health, an oral directive will be acceptable, provided that information is documented immediately in the patient's record and a written directive is prepared within 24 hours of the oral directive. Please include such a provision in your QMP. If, because of the emergent nature of the patient's condition, a delay in order to provide a written directive would jeopardize the patients health, an oral directive will be acceptable, provided that the information provided in the oral directive is documented immediately in the patient's record and a written directive is prepared within 24 hours of the oral directive. 96. Revisions to written directives dated and signed by a.u. prior to \_ YES \_NO (19) administration of a radiopharmaceutical dosage Revisions to written directives may be made for any diagnostic or therapeutic procedure provided that the revision is dated and signed by an authorized user prior to the administration of the radiopharmaceutical dosage. Your QMP must include a policy/procedure that requires that revisions to written directives will be made prior to administration. **OBJECTIVE 2 - PATIENT IDENTITY VERIFICATION [10 CFR 35.32 (a)(2)]** YES NO (23f) 97. Procedure to verify patient's identity by more than one method prior to administration Procedures to verify the patient's identity by more than one method prior to administration, as required by 10 CFR 35.32(a)(2) have not been adequately addressed in your QMP. Your QMP must include a policy/procedure to require that, prior to each Therapeutic Radiopharmaceutical other than 1-125 or I-131 administration, the patient's identity will be verified by more than one method as the individual named in the written directive as required by 10 CFR 35.32(a)(2).

## OBJECTIVE 3 - TREATMENT PLANS VERIFICATION (NOT APPLICABLE TO RADIOPHARMACEUTICAL THERAPY)

December 6, 1993

-30-

Therapeutic Radiopharmaceutical other than I-125 or I-131

# OBJECTIVE 4 - VERIFICATION PRIOR TO ADMINISTRATION TO WRITTEN DIRECTIVE [10 CFR 35.32(a)(4)]

YES NO (27c) Procedures to ensure, before administration, that each 98a. administration is in accordance with the written directive. Your submittal for administration of therapeutic radiopharmaceutical other than I-125 or I-131 does not include policies/procedures that ensure that each administration is in accordance with the written directive as required by 10 CFR 35.32(a)(4). Describe your policy/procedure to verify, before administering the byproduct material, that the specific details of the administration are in accordance with the written directive. 98b. Confirm the radiopharmaceutical, dosage and route of administration Y YES \_ NO (27d) Dosage measured in dose calibrator and results compared with the prescribed dosage in the written directive According to guidance provided by Regulatory Guide 8.33, the radiopharmaceutical, dosage, and route of administration should be confirmed by the person administering the radiopharmaceutical to verify agreement with the written directive, that is, the dosage should be measured in the dose calibrator and the results compared with the prescribed dosage in the written directive. Please provide such (or similar) procedures in your QMP. 99. Commitment for all workers to seek guidance if they do not understand how to carry out the written directive Your QMP must include a policy for instruction of all workers to seek guidance if they do not understand how to carry out the written directive. Please include such a provision in your QMP. YES 100. A written directive and records of each administered Therapeutic Radiopharmaceutical other than I-125 or I-131 must be maintained for three years. A commitment to retain each written directive and a record of each administered radiopharmaceutical dosage for three years after the date of administration is required in 10 CFR 35.32(d)(2). Describe the procedure for an authorized user or a qualified individual under the supervision of an authorized user (e.g., a nuclear medicine physician, physicist, or technologist), after administering a radiopharmaceutical, to make, date, sign or initial a written record that documents the administered dosage in an auditable form. **OBJECTIVE 5 - UNINTENDED DEVIATIONS [10 CFR** 101. Policies/Procedures for identification and evaluation of NO (34f) unintended deviations from the written directive Your QMP for Therapeutic Radiopharmaceutical other than I-125 or I-131 must include policies/procedures to identify and evaluate any unintended deviations from a written directive and to institute corrective actions to be taken after the deviation has been identified as required by 10 CFR 35.32(a)(5). Please include such a provision in vour OMP. 102a. Institution of corrective actions to be taken after the deviation has been identified Your QMP must include policies/procedures to institute corrective actions to be taken after an unintended deviation has been identified

December 6, 1993

Therapeutic Radiopharmaceutical other than I-125 or I-131
## EVALUATION AND RESPONSE TO RECORDABLE EVENTS [10 CFR 35.32(c)]

102b. Commitment for evaluation and response to each recordable event by: (i) assembling the relevant facts including the cause; (ii) identifying what, if any, corrective action is required to prevent recurrence; and (iii) retaining a record, in an auditable form, for three years, of the relevant facts and what corrective action was taken.

As required in 10 CFR35.32(c), the licensee shall evaluate and respond, within 30 days after discovery of the recordable event, to each recordable event by:(i) assembling the relevant facts including the cause; (ii) identifying what, if any, corrective action is required to prevent recurrence; and (iii) retaining a record, in an auditable form, for three years, of the relevant facts and what corrective action was taken.

## PERIODIC REVIEWS OF THE OM PROGRAM [10 CFR 35.32(b)]

103. Time intervals (intervals not to exceed 12 months)

Your submittal for Therapeutic Radiopharmaceutical other than I-125 or I-131 does not provide adequate procedures to conduct periodic reviews of your QMP as required by 10 CFR 35.32(b). You must include the time intervals for your reviews. These reviews should be conducted at intervals no greater than 12 months.

104. Review includes an evaluation of acceptable representative sample of all patient administrations, all recordable events, and misadministrations

Your QMP review does not provide an evaluation of (i) an adequate representative sample of patient administrations (ii) all recordable events, and (iii) all misadministrations since the last review as required in 10 CFR 35.32(b)(1). The number of patient cases to be sampled should be based on the principles of statistical acceptance sampling and should represent each modality performed in the institution (e.g., radiopharmaceutical, teletherapy, brachytherapy, and gamma stereotactic radiosurgery). You may develop a sampling procedure of your own; use the chart provided in 10 CFR 32.110 (assuming an error rate of 2 percent); or a representative sample may be selected including (at a minimum): 20% if the number of cases performed is greater than 100, 20 cases if the number of cases is between 20 and 100, and all, if the number of cases is less than 20.) Provide a copy of your revised QMP to include this provision.

105. Includes procedure to expand review if recordable events or misadministration is uncovered during the periodic review of your QMP.

According to guidance provided by Regulatory Guide 8.33, your QMP should include a procedure to expand the number of cases reviewed when a misadministration or recordable event is uncovered during the periodic review of your QMP. Please include such a provision in your QMP.

106. Procedures for determining the effectiveness of the QM program and, if necessary, making modifications to meet the objectives of the program

Describe your procedures to evaluate the effectiveness of the QMP, and, if necessary, to make modifications to meet the objectives of the program as required by 10 CFR 35.32(b)(2).

107. Modifications to QM program submitted to NRC within 30 days after modification has been made

Please provide assurance that modifications to your QMP will be submitted to the NRC within 30 days after the modification has been made as required by 10 CFR 35.32 (e)

108. Records of each review and evaluation to be maintained for 3 years

Please provide assurance that records of each review and evaluation will be maintained for three years as required in 10 CFR 35.32 (b)(3).

REPLY TO ATTENTION OF:

Nuclear Medicine Service

030-01317 08-01738-02

United States Nuclear Regulatory Commission Region I 475 Allendale Road King of Prussia, Pennsylvania 19406

Gentlemen:

Pursuant to Title 10, Chapter 1, Code of Federal Regulations, Part 35, Section 35.32(f)(2), we provide you with written certification that a Quality Management Program, or continuous Quality Improvement (CQI) Plan, is implemented at Walter Reed Army Medical Center.

Referenced in paragraph 1 of the CQI are the written policies and procedures which make up the plan (Enclosure). Also enclosed is a copy of the Nuclear Medicine Service Pharmacy Standing Operating Procedures (SOP) which contain the specific objectives as established in 10 CFR 35.

Sincerely Roy D. Quick, Jr.

Koy D. Quick, Jr: Major, U.S. Army Executive Officer

h. U.S. NRC REGULATORY GUIDE 10.8, AUGUST 1987 (rev 2)

I. WRAMC NUCLEAR MEDICINE IMAGING SOP

2. Responsibility: Colonel Jay H. Anderson, MC, Chief, Nuclear Medicine Service has been appointed the Quality Assurance Officer for the Nuclear Medicine Service. He shall be responsible for coordinating all monitoring and evaluation of the quality and appropriateness of care in the Nuclear Medicine Service.

3. Scope: The Nuclear Medicine Service provides diagnostic nuclear medicine procedures, both imaging and non-imaging, for in-patients and out-patients, interprets these studies and performs radionuclide therapy in accordance with appropriate standards of practice and governing regulations.

4. Important Aspects of Care:

(A). Assessing patient condition to determine special needs for supervision.

(B). Assessing risk factors in the following patient population:

(1). Patients with fractures or limitation of motion.

- (2). Cardiac patients being tested by stress testing.
- (3). Pediatric patients.
- (4). Women during childbearing years.
- (5). Senile patients.
- (6). Disoriented or comatose patients.

(C). Staff performance during procedures:

- (1). Radiopharmaceutical dose preparation.
- (2). Administering radiopharmaceuticals.
- (3). Patient imaging
- (4). Computer analysis of studies.
- (5). Providing patient with specific instructions as to the risks, benefits and side affects of specific treatments.
- (6). Alievating patients fears about radioactivity.

- 5. Indicators: See attached appendix A.
- 6. Criteria: See attached appendix A.
- 7. Data Collection: See attached appendix A.
- 8. Problem Solving:

. .....

- a. A monthly Nuclear Medicine Service CQI meeting will address ongoing indicators and identify new problems, which if validated will be entered into the tracking system.
- b. Based on the nature of the problem, an individual or a group of individuals will be given responsibility to investigate the problem and recommend corrective action where necessary.

9. Reports: The minutes of the Nuclear Medicine Service CQI Committee will be forwarded to the CQI committee of the Dept of Radiology. A copy will be maintained by the NMS.

10. The CQI coordinator will be responsible for an annual review and update of the Total Quality Management plan (January), including the monthly Peer Review, and CQI minutes. The CQI Plan incorporates the reccomendations published in the Federal Register (10CFR 35.32) on July 25 1991. Specific issues are addressed in the references cited at the top of this document.

11. The Nuclear Medicine Parmacist will be responsible for maintaining optimal radiopharmacy practices, and will provide an annual review of the NMS SOP to include quality control and radiation safety which will be updated and modified to comply with federal regulations.

12. The Technical Director and the Imaging Supervisor will be responsible for an annual review and update of the Imaging SOP, monthly technologist peer review, and supervising the instrument quality control on a daily basis. A consulting physicist will review these procedures at least bi-annually.

13. The RIA Supervisory Technologist is responsible for maintainance of optimal practices and an annual review of the SOP.

14.Confidentiality: All Quality Assurance activities, all committee members and all personnel engaged in the Quality Assurance program will be bound by the confidentiality Policy.

15. Reports, minutes, and other findings may not be released to or discussed with any person or agency except those mandated by Chief, Nuclear Medicine Service. These activities may be reviewed by JCAHO or any professional surveyor for the purpose of accreditation. Such professional accreditation review will be the sole

exception to the confidentality policy.

eluzit.

## NUCLEAR PHARMACY SOP

1. <u>PURPOSE:</u> The purpose of this SOP is to describe the procurement, compounding, quality control, and dispensing of radiopharmaceuticals to include investigational new agents.

## 2. FUNCTIONS OF NUCLEAR PHARMACIST:

a. Assure safety, effectiveness and correctness of radioactive drugs used in patients at WRAMC through biological, chemical, physical, and radiological testing and radioactive drug use surveillance.

b. Assists in clinical and laboratory investigations using radioactive drugs through consultation, drug formulation and safety testing, assisting principal investigators with the preparation of research protocols, and INDs and carrying out the portion of the Pharmacy Service's responsibility to the WRAMC investigational drug program that pertains to the use of radioactive drugs in humans.

c. Provides didactic and laboratory instruction and examination in nuclear pharmacy courses and programs in support of nuclear medicine, nuclear medicine technology, radiation health physics, and clinical nuclear pharmacy courses, programs, residencies, and clerkships.

d. Develops and evaluates new radiopharmaceuticals and new radiopharmaceutical compounding and testing procedures and evaluates those developed by other institutions and by manufacturers.

e. Provides nuclear pharmacy services within the WRAMC Nuclear Medicine Services:

(1) Maintains a continuous inventory of the best quality radiopharmaceuticals available at the least practical cost; includes commercial and in-house formulations.

(2) Prepares and dispenses quality control tested radiopharmaceuticals in precalibrated doses ready for patient administration.

Nuclear Pharmacy SOP

5 Mar 1990

HSHN-XN

(3) Orders, receives, assays and stores radioactive drugs IAW WRAMC, DA, and federal regulations.

(4) Maintains prescription, formulation, receipt, inventory, use and disposal records pertaining to approved and investigational radioactive drugs as required by military, federal, and WRAMC rules and regulations.

(5) Monitors and reduces laboratory radiation levels and surveys for and decontaminates spilled radioactive material in cooperation with WRAMC Health Physics Officer.

(6) Instructs Nuclear Medicine Service personnel in laboratory techniques for safe handling of radioactive materials.

(7) Conducts Nuclear Pharmacy laboratory training for nuclear medicine technologists and nuclear medicine residents.

## 3. <u>QUALIFICATIONS AND DUTIES OF NUCLEAR PHARMACIST</u>: F

a. The nuclear pharmacist should be certified by the American Pharmaceutical Association, Board of Pharmaceutical Specialties as a Nuclear Pharmacist. As a minimum the radiopharmacist will be a registered pharmacist with training and experience in nuclear pharmacy, nuclear medical science, and radiation health physics.

b. Serves as a member of the WRAMC Radiation Control Committee.

c. Has operational control of nuclear medicine technologists and technicians working in the Nuclear Pharmacy laboratory.

d. Supervises radiation safety procedures, laboratory, and personnel radiation monitoring, radioactive waste handling and related health physics operations within the nuclear pharmacy in close cooperation with the WRAMC Health Physics officer.

e. Coordinates storage, preparation, use, disposal and records-keeping for human use, radioactive, investigational new drugs, with the Pharmacy Service, Nuclear Medicine Service, and Dept of Clinical Investigations.

18 Jul 1991

HSHN-XN

SOP RP # 1

#### MANDATORY WORK RULES

1. Disposable gloves and lab coats will be worn as protective garments when working with radioactive materials.

2. Technetium-99m radiopharmaceutical solutions will be tested by radiochromatography and pH before dispensing individual doses.

3. Doses of radiopharmaceuticals will be within 10% of the prescribed radioactivity at the time of administration to patients.

4. All student prepared doses of radiopharmaceuticals will be checked for correctness by a staff member prior to dispensing. The staff member who checks a dose prepared by a student will initial the consultation and dose label. The staff member must observe the student while the dose is being prepared or the student must leave out for inspection all vials and paraphernalia needed to prepare the dose.

5. Records will be completed and doses of radiopharmaceuticals will be prepared and available for administration to patients by 0730 daily, when appropriate.

6. All appropriate labeling and record entries will be completed before workers leave the radiopharmaceutical laboratory area.

7. All radiopharmaceutical doses will have a dose label attached to the syringe for parenteral doses or dispensing vial for oral doses.

8. Work areas will be surveyed at close of business daily with an appropriate portable radiation detection instrument. Results will be recorded in the record book designated for this purpose.

9. Syringe and vial shields will be utilized for the preparation of radiopharmaceutical vials. Syringe shields will be utilized for administration of doses to patients except in circumstances where their use would compromise the patient's well being.

10. Workers will insure that radioactive materials are either secured or under supervision of clinic personnel at all times, and that non-clinic personnel are accompanied whenever they venture into controlled areas.

11. The clinic will be locked after duty hours.

Nuclear Pharmacy SOP

## 18 Jul 1991

12. For each dose prepared, review the consultation sheet and radiopharmacy order to insure that you understand it. Select the one correct radiopharmaceutical from the storage area and place it in the work area. Read the label. Prepare the dose consistent with the activity required for the study. Read the label. Replace the vial back into the storage area. Read the label. One and only one radiopharmaceutical will be in the work area at a time.

## Nuclear Pharmacy SOP

5 Mar 1990

#### SOP RP # 2

## PREPARING TECHNETIUM-99m RADIOPHARMACEUTICALS

1. Technetium-99m radiopharmaceuticals are prepared according to the directions given in WRAMC Nuclear Pharmacy Formula Record Worksheets.

2. Quality control tests will be initiated before preparing individual precalibrated doses and will be completed before dispensing doses for administration to patients. Radiochemical purity of products will comply with guidance given in the current United States Pharmacopeia (U.S.P.). In cases where no U.S.P. guidance exist, doses will not be dispensed if there is more than 10% of the radionuclide in an undesirable radiochemical form.

5 Mar 1990

HSHN-XN

#### SOP RP # 3

## MONITORING AND INITIAL RECORDS KEEPING UPON RECEIPT OF RADIOACTIVE MATERIALS

1. Radiopharmaceuticals intended for use at Walter Reed AMC Nuclear Medicine Service may be received directly from a local centralized nuclear pharmacy during duty hours. They will be monitored, inspected, and wipe tested where appropriate. Radiopharmaceuticals ordered from a manufacturer will be received by Health Physics Office located at Forest Glen Section and subsequently delivered to Nuclear Medicine.

2. Follow the attached receipt procedure for initial log in of radiopharmaceuticals into the radiopharmacy record system.

3. The vial should be placed in the lead container and the radiopharmaceutical stored in the shielded radiopharmaceutical storage area.

4. If the radiopharmaceutical requires refrigeration, it should be placed in the shielded refrigerator designated for radioactive materials.

5. Upon receipt of RIA kits, the type, lot number, date of expiration, and control number will be assigned in the RIA log.

#### Nuclear Pharmacy SOP

5 Mar 1990

SOP RP # 4

#### RECORDS KEEPING

1. The purpose of these records is:

a. A history of each radioactive item received from date of receipt, through use, to final disposition as radioactive waste or as decayed to background radiation level.

b. A record of patients to whom radioactive materials are administered, including lot numbers of component ingredients.

c. A record of doses prescribed on the individual consultation sheet, individual worksheet, or daily batch worksheet.

d. Consent record for use of investigational or therapeutic radioactive drugs in all patients.

e. Record of calibration checks on radiation dose<sup>+</sup>measuring devices.

f. Record of compounding radiolabeling kits.

2. Several records are kept from one Nuclear Regulatory Commission inspection to the next or for three years or longer, as appropriate. These records include:

a. A radiopharmaceutical stock record which documents the lot number, use, and disposition of radiopharmaceuticals and also gives individual radionuclide dose measurements for each dose of radioactive material administered to patients. (Stock Record Sheet)

b. A Nuclear Pharmacy laboratory record which gives a chronological record of radiation dose calibrator checks.

c. Patient consent forms are filed in the nuclear pharmacy.

3. Records of all misadministrations of radiopharmaceuticals shall be preserved until the Nuclear Regulatory Commission authorizes their disposition.

5 Mar 1990

SOP RP # 5

#### RADIATION SAFETY

1. The WRAMC Health Physics Office has principal responsibility for formulating radiation safety procedures and for records keeping for WRAMC. These procedures, which are given in WRAMC Regulation 40-10, must be perused and followed by persons assigned to the Nuclear Pharmacy Service.

2. In addition to the directives and guides in WRAMC Reg 40-10, the following rules will be followed:

a. Latex gloves and lab coats will be worn when handling radioactive materials.

b. Work surfaces will be lined with absorbent paper before handling radioactive materials.

c. After handling radioactive materials, hands and immediate work areas should be checked with a radiation monitor before leaving the radiopharmacy laboratory.

d. All pharmacy personnel will wear a film badge, and a TLD ring when working in the Nuclear Pharmacy laboratory or with radioactive patients.

e. The Nuclear Pharmacy laboratory will be continuously monitored with radiation detectors. Monitoring should reveal improper storage of radioactive material and poor handling techniques of workers.

f. A radiation survey will be conducted in the Nuclear Pharmacy daily at close of business with an appropriate portable radiation detection instrument. Routine surveys of the radiopharmacy and dose room will include the areas indicated on the Health Physics Laboratory Survey Form (WRAMC 708) included as addendum one to this annex.

g. The procedure for handling spills of radioactive materials in the radiopharmacy is outlined in addendum to this SOP.

Nuclear Pharmacy SOP

NUCLEAR MEDICINE SERVICE DEPARTMENT OF RADIOLOGY WALTER REED ARMY MEDICAL CENTER WASHINGTON, D.C. 20307-5001

HSHL-XN1

19 August 1987

#### RADIONUCLIDE ACCIDENT EMERGENCY PROCEDURES

A. <u>Purpose</u>: To define actions to be taken in event of an accident involving radioactive materials.

B. Minor Spills Involving No Radiation Hazard to Personnel:

- 1. Notify all other persons in the room at once.
- 2. Permit only the minimum number of persons necessary to deal with the spill into the area.
- 3. Confine the spill immediately.

Liquid spills:

Don protective gloves Drop absorbent paper on spill

## Dry Materials Contamination:

Don protective gloves Dampen thoroughly, taking care not to spread the contamination

- 4. Notify the Health Physics Office as soon as possible.
- 5. Decontaminate.
- 6. Monitor all persons involved in the spill and cleaning.
- 7. Permit no person to resume work in the area until survey is
- made, and approval of the Health Physics Officer is secured.
  8. Prepare a complete history of the accident and subsequent activity relating thereto for the Health Physics Office.
- C. Major Spills involving Radiation Hazard to Personnel:
  - Notify all persons involved in the spill to vacate the room at once.
  - 2. If the spill is liquid, and the hands are protected, right the contanier.
  - 3. If the spill is on the skin, flush thoroughly.
  - 4. If the spill is on the clothing, discard outer or protective clothing at once.
  - 5. Switch off all fans.
  - 6. Vacate the room.
  - 7. Notify the Health Physics Office as soon as possible.
  - 8. Take immediate steps to decontaminate personnel involved as necessary.
  - 9. Decontaminate the area. (Personnel involved in decontamination must be adequately protected).

5 Mar 1990

## SOP RP # 6

#### QUALITY CONTROL PROCEDURES

1. The purpose of quality control procedures is to insure that the correct radionuclide in the correct radiochemical form is administered in the correct dose of radioactivity.

2. Sterility and nonpyrogenicity, if appropriate, is assured by either the manufacturer or by compounding procedures given in SOP RP #8 (Compounding Radiopharmaceuticals).

The correct radiochemical form for drugs purchased in 3. precalibrated final dose form is assured by the supplier. Spot checks may be done by the Nuclear Pharmacy if the radiochemical form usually has short stability or if the quality control procedures of the supplier are not considered adequate. Quality control tests for radiochemical form of technetium-99m compounds qiven are in SOP RP #2 (Preparing Technetium-99m Radiopharmaceuticals) and in SOP RP #8 (Compounding Radiopharmaceuticals).

4. Highly important quality control and radiation safety procedures are given in SOP RP #1 (Mandatory Work Rules).

5. Quality control tests for dose calibrators are performed IAW NRC Reg Guide 10.8, Appendix C.

6. Quality control tests for in-house compounded radiolabeling kits are described in SOP RP #8 (Compounding Radiopharmaceuticals).

Nuclear Pharmacy SOP

## NUCLEAR MEDICINE QUALITY ASSURANCE PROGRAM

## RADIOPHARMACY

The radiopharmacy receives, performs Q.C. and measurements, and dispenses all radiopharmaceutical doses for the Nuclear Medicine Service.

Ongoing indicators are related to instrumentation, radiation protection, and product quality control as well as dispensing and patient considerations. Special indicators and data searches are developed at the request of Nuc Med Svc QA committee.

| INDICATOR                                                                                                               | THRESHOLD                                                                          | FREQUENCY                                      |

5 Mar 1990

SOP RP # 7

#### RADIATION WASTE MANAGEMENT AND DISPOSAL

1. Records of radiopharmaceuticals transferred to "rad waste" are kept on the radiopharmaceutical stock record sheet.

2. Radioactive waste is separated into two lead-lined containers. One container contains needles, syringes, and other paraphernalia presenting a chemical or bio-hazard to waste handlers. Other radioactive waste is placed in the second container.

3. The waste containers are collected as needed on Wednesday afternoon by Health Physics.

5 Mar 1990

SOP RP # 8

## COMPOUNDING RADIOPHARMACEUTICALS

1. Radiolabeling kits will be compounded by a pharmacist who has satisfied the WRAMC Radiation Control Committee that he is competent to compound radiopharmaceuticals and to handle radioactive materials.

2. A record will be maintained of each lot of radiolabeling kits compounded. The record will show the ingredients and lot numbers, method of compounding and quality control test results.

3. The compounding of radiolabeling kits for investigational new drugs will require submission of a research protocol through the Radiation Control Committee and the Clinical Investigation Committee and final review by the OTSG Human Use Review Board as appropriate. Formulations for radiolabeling kits compounded for clinical use at WRAMC will be reviewed by the Human Use Subcommittee of the RCC with a recommendation to the plenary RCC.

4. Quality control procedures may include, as appropriate, testing for radionuclidic purity by spectrum analysis, radiochemical purity by radiochromatography, sterility and nonpyrogenicity by U.S.P. designated tests, particle size by microscopic examination, and pH by pH meter or pH paper.

#### Product: Tc-99m DMSA (Succimer Kit) by MPI May 1988

## KIT PREPARATION INSTRUCTIONS

1. Latex gloves should be worn during this preparation.

2. Hold the ampule of DMSA reagent in one hand and open it by applying pressure above the score line on the narrow part of the neck of the ampule.

3. Pull up 2 ml. of DMSA and inject into the shielded mixing vial and withdraw an equal volume of air.

4. Calculate the volume of pertechnetate needed for 20 mCi. of activity. Pull up this volume and if necessary add sufficient normal saline to make 2 ml. of pertechnetate solution. Print the appropriate subtraction and product tickets.

5. Aseptically inject the pertechnetate into the mixing vial and withdraw an equal volume of air. This will give a final volume of 4 ml. Mix the solution thoroughly.

6. Incubate the labeled product at room temperature for at least 10 minutes before dispensing.

7. Check the pH. and record (3.0 - 4.0)

8. Perform ITLC using silica gel (SG) paper with acetone as solvent. Do not use the product if less than 85% label.

9. DO NOT USE THE PRODUCT MORE THAN TWO HOURS FROM THE TIME OF PREPARATION. REPEAT QC PRIOR TO EACH DOSE WHEN USED OVER 30 MINUTES FROM PREPARATION TIME.

5 Mar 1990

#### Jul 1987

TECHNETIUM TC-99m PENTETATE KIT (MPI DTPA by Medi-Physics)

#### KIT PREPARATION INSTRUCTIONS

- 1. Waterproof gloves should be worn during the preparation procedure.
- 2. Remove the central plastic disc from the MPI DTPA vial and swab the tip of the vial closure with alcohol to sanitize the surface.
- 3. Place the vial in a suitable radiation shield.
- 4. Calculate the required amount of TcO₄ (range 15 to 250 mCi.) and draw this amount into a shielded syringe. If required, add sufficient normal saline to five a final volume of 4 ml. Place the syringe in the dose calibrator to measure the radioactivity and print the product ticket.
- 5. Slowly inject the TcO<sub>4</sub> into the vial which had been placed in the shield.
- 6. Prior to removing the needle, withdraw an equal volume of air as was injected into the vial.
- 7. Swirl the contents of the vial for one minute and let stand 1 or 2 minutes.
- 8. Determine pH of the product. (3.8 7.5)
- 9. Perform ITLC chromatography using Silica Gel (SG) paper with acetone for the solvent. The desired product will stay at the origin. Record the results. Do not use if chromatography indicates more than 10% free TcO<sub>4</sub> is present.
- 10. Examine vial contents for particulates prior to injection. If cloudy, do not use.
- 11. Use within eight hours of preparation.

Nuclear Pharmacy SOP

5 Mar 1990

## Product: Tc-99m Gluceptate by Mallinckrodt May 1988

## KIT PREPARATION INSTRUCTIONS

1. Latex gloves should be worn during the preparation.

2. Calculate the required amount of TCO, to add to the vial. Usually add 80 mCi in a total of 2 ml.

3. Aseptically add the pertechnetate to the shielded reaction vial and remove an equal volume of air to maintain a negative pressure. Swirl for 30 seconds.

4. Assay and print the appropriate dose calibrator tickets to account of  $TcO_4$  Using proper shielding visually inspect to insure that the solution is clear and free of particulate matter. Do not use if either is present.

5. Check and record the pH. (5.5 - 7)

6. Perform ITLC chromatography using silica gel (SG) paper with acetone as solvent. Do not use if less that a 90% label.

7. Use within eight hours from time of preparation.

5 Mar 1990

#### JUL 1987

## Technetium-99m DISOFENIN (HEPATOLITE BY NEN)

#### KIT PREPARATION INSTRUCTIONS

- 1. Assemble the following items prior to preparation: 1 vial od Disofenin, vial shield, 3 ml syringe, normal saline without bacteriostatic agent.
- 2. Latex gloves should be worn during the preparation.
- 3. Remove the plastic disc from the vial, swab the top of the vial closure with alcohol and let the alcohol dry.
- 4. Place the vial in a suitable radiation shield.
- With a sterile shielded syringe, aseptically obtain not more than 100mCi TcO<sub>4</sub> solution in 2 to 3 ml. THE GOAL IS 20mCi/ml.
   Aseptically add the TcO<sub>4</sub> to the vial in the lead shield and withdraw an equal amount of air from the vial.
- 7. Swirl the contents of the vial for 1 minute and let stand 1 to 2 minutes
- 8. Print appropriate calibrator dose tickets to account for TcO<sub>4</sub> used and to create a product ticket for disofenin.
- 9. Examine vial contents for particulates prior to injection.
- 10. Check pH.
- 11. Perform ITLC chromatography using <u>polysilicic acid gel (SA)</u> paper with 20% saline as the solvent. Record the results. Do not use if less than 90% label.
- 12. Use within eight (8) hours from the time of preparation.

Product: Tc-99m Macroaggreated Albumin (MAA) (Pulmolite by NEN or MPI MAA by Medi-Physics) May 1988

## KIT PREPARATION INSTRUCTIONS

1. Latex gloves should be worn during the preparation.

2. Calculate the amount of TCO<sub>4</sub> to be added aseptically to the shielded vial. Recommend maximum of 60 mCi. (Usually use 60 mCi. TCO<sub>4</sub> and add sufficient normal saline U.S.P. to make 6 ml total volume. This gives a concentration of about 1 million particles per milliliter.) Draw this amount into the shielded syringe. Place the syringe in the dose calibrator to measure the radioactivity and print product and subtract ticket.

3. Add  $TcO_4$  down the side of the vial and withdraw air from the vial to maintain negative pressure.

4. After addition of the pertechnetate, swirl for a few seconds and allow to stand for five (5) minutes. During the mixing process do not shake the product enough to cause foaming of the solution. 5. Determine the pH of the product. (3.8 - 8.0).

6. Perform ITLC chromatography using Silica Gel (SG) paper with normal saline as solvent. The desired product will stay at the origin. Do not use the product if less than a 90% label.

7. Prior to withdrawing a dose, the contents of the vial should be sufficiently agitated to effect homogenous suspension of the aggregated albumin.

8. Store the vial in the shield in the refrigerator at 2 to 8 degrees C.

9. Discard the solution after six(6) hours from time of preparation.

10. SPECIAL NOTE: DO NOT EXCEED 1 ML VOLUME PER SINGLE PATIENT DOSE.

#### HSHN-XN

## Product: Tc99m Medronate (Tc-MDP by Medi-Physics Inc) May 88

## KIT PREPARATION INSTRUCTIONS

1. Latex gloves should be worn during the preparation procedure. 2. Remove the central plastic disc from the MPI MDP Kit vial and swab the top of the vial closure with alcohol to sanitize the surface.

3. Place the vial in a suitable radiation shield.

4. Calculate the required amount of TCO<sub>4</sub> (range 15 to 500 mCi.) and draw this amount into a shielded syringe. If required, add sufficient normal saline to give a final volume of 6 ml. Place the syringe in the dose calibrator to measure the radioactivity and print the product ticket.

5. Slowly inject the TcO, into the vial which had been placed in the shield.

6. Prior to removing the needle withdraw an equal volume air from the vial.

7. Swirl the contents of the vial for one minute and let stand 1 or 2 minutes.

8. Determine the product pH. (4.0-7.4)

9. Perform ITLC chromatography using Silica Gel (SG) paper with acetone for the solvent. The desired product will stay at the origin. Record the results. Do not use if more than 10% free TcO<sub>4</sub> is present.

10. Examine the vial contents for particulates prior to injection. If cloudy do not use.

11. Use within eight hours of preparation.

5 Mar 1990

Product: Stannous Pyrophosphate for <u>BLOOD POOL IMAGINE</u> TechnescanPYP by Mallinckrodt. May 1988

#### KIT PREPARATION INSTRUCTIONS

1. Reconstitute the PYP vial with 2.4 ml. of normal saline 2. Shake the reaction vial sufficiently to bring the lyophilized powder into solution. Allow to stand until all particles are dissolved and in solution. This is usually less than five minutes. The resulting solution should be clear and colorless. If not the vial should not be used.

3. Administer 1 ml. per patient dose by direct venepuncture. 4. Write the time and date of preparation on the vial. Store the vial at room temperature under the laminar flow hood and use within 6 hours after reconstitution.

#### 5 Mar 1990

#### HSHN-XN

Product: Technetium 99m pyrophosphate (Technescan PYP by Mallinckrodt) May 1988

#### KIT PREPARATION INSTRUCTIONS

1. Latex gloves should be worn during the preparation.

2. Calculate the amount of pertechnetate solution required. (Use 60 mCi. in a total of 2 ml.). Pull up the required activity, make the dilution if needed, and assay the activity. Make the required subtraction and product tickets in the dose calibrator.

3. Aseptically add the pertechnetate solution to the shielded mixing vial and remove an equal volume of air.

4. Mix thoroughly and allow to stand at room temperature for 5 minutes.

5. Check the pH. (4.5 - 6.0)

6. Perform ITLC using silica gel (SG) paper and acetone. If the label is less than 90% do not use the product.

7. Store in the shielded vial at room temperature and use within 6 hours.

## 5 Mar 1990

## Product: Tc-99m Sulfur Colloid (TechneColl by Mallinckrodt) Jul 87.

## KIT PREPARATION INSTRUCTIONS

1. Latex gloves should be worn during the preparation procedure 2. Assemble the following items prior to preparation: Technecoll kit from Mallinckrodt which contains a reaction vial (2 ml. of phosphoric acid, 100 mg.) syringe I (1.1 ml with 12 mg. gelatin and 9 mg. sodium chloride also 0.5 ml with 12 mg. sodium thiosulfate, and syringe II (0.6 ml. with 36 mg. gelatin and 9 mg of sodium chloride also 1.0 ml with 544 mg sodium acetate and 5 mg edetate disodium).

3. Start the water bath and heat water to boiling.

4. Calculate the required amount of TCO, ( range 5mCi to 120 mCi in a maximum of 5 ml.) and draw this amount into the syringe noting the volume used. Place the syringe in the dose calibrator to measure the radioactivity and print product ticket. Note: There is 5 ml in the reaction vial and the 2 syringes.

5. Place the reaction vial into the shield and add the  $TcO_4$ . 6. Immediately add syringe I.

7. Place the reaction vial in the boiling water for 8 minutes.

8. Remove the reaction vial from the water bath ( solution will appear milky white) and using a 20 ml. syringe, vent the pressure from the reaction vial.

9. Add syringe II to the reaction vial.

10. Place the reaction vial in boiling water for 2 minutes.

11. Remove the reaction vial from the water bath and cool.

12. Determine the pH of the product (4.0 - 7.5).

13. Perform ITLC using SG paper with normal saline as the solvent. The desired product will stay at the origin. Record the results. Do not use if less than 92% label.

14. Use with 8 hours of preparation.

#### 5 Mar 1990

Product: Tc-99m Sulfur Colloid (TechneColl by Mallinckrodt) Jul 87

#### KIT PREPARATION INSTRUCTIONS

1. Latex gloves should be worn during the preparation procedure 2. Assemble the following items prior to preparation: Technecoll kit from Mallinckrodt which contains a reaction vial (2 ml. of phosphoric acid, 100 mg.) syringe I (1.1 ml with 12 mg. gelatin and 9 mg. sodium chloride also 0.5 ml with 12 mg. sodium thiosulfate, and syringe II (0.6 ml. with 36 mg. gelatin and 9 mg of sodium chloride also 1.0 ml with 544 mg sodium acetate and 5 mg edetate disodium).

3. Start the water bath and heat water to boiling.

4. Calculate the required amount of TcO<sub>4</sub> ( range 5mCi to 120 mCi in a maximum of 5 ml.) and draw this amount into the syringe noting the volume used. Place the syringe in the dose calibrator to measure the radioactivity and print product ticket. Note: There is 5 ml in the reaction vial and the 2 syringes.

5. Place the reaction vial into the shield and add the TcO<sub>4</sub>.

6. Immediately add syringe I.

7. Place the reaction vial in the boiling water for 8 minutes.

8. Remove the reaction vial from the water bath ( solution will appear milky white) and using a 20 ml. syringe, vent the pressure from the reaction vial.

9. Add syringe II to the reaction vial.

10. Place the reaction vial in boiling water for 2 minutes.

11. Remove the reaction vial from the water bath and cool.

12. Determine the pH of the product (4.0 - 7.5).

13. Perform ITLC using SG paper with normal saline as the solvent. The desired product will stay at the origin. Record the results. Do not use if less than 92% label.

14. Use with 8 hours of preparation.

## Product: Tc-99m HMPAO (Tc-Ceretec by Amersham Inc.)

#### **KIT PREPARATION INSTRUCTIONS**

1. Latex gloves should be worn during the preparation procedure.

2. Remove the center disc from the CERETEC vial and swab with alcohol.

3. Place the vial in a vial shield.

4. Using a 10 ml. shielded syringe prepare 30 mCi of TcO4 in 5 ml. of normal saline.<sup>1</sup> Place the syringe in the dose calibrator and prepare a product ticket. 5. Inject the activity into the shielded vial and withdraw an equal volume of headspace.

6. Proceed with QC within 5 minutes of product preparation.

7. Use the product within 30 minutes of preparation time.

#### QUALITY CONTROL OF HMPAO

1. Prepare a vial with 0.5 cm of Methyl Ethyl Ketone (MEK) in it.

2. Use the normal saline QC flask for a second strip.

3. Use SG ITLC paper for both tests.

4. Place a drop of Tc-HMPAO about 1 cm from the bottom of each strip.

5. Allow the strips to run and cut them in half.

6. Lipophilic HMPAO (HMPAOL) should be at least 80%

The distribution of the substituents are as follows:

Percent HMPAO<sub>L</sub> = % HMPAO<sub>L</sub> + TcO4 (MEK strip) minus - % TcO4 (NaCl strip)

1 Generator must have been eluted within TWO HOURS of preparation time of HMPAO  $\hfill \hfill \hfi$ 

## Technetium-Mertiatide (MAG3) by Mallinckrodt

#### **KIT PREPARATION INSTRUCTIONS**

1. Put on Latex Gloves

2. Swab the top of the vial rubber septum with ispropyl alcohol

3. Prepare a rolling water bath.

4. a. Insert a filtered venting needle into the septum.

b. Inject 100 mCi. of TcO4 in a volume of 4 ml into the vial.

c. After adding the TcO4 draw 2 ml of air back into the syringe.

5. Withdraw the venting needle and syringe from the vial; invert the vial several times to fully dissolve the powder.

6. Place the reaction vial into the boiling water bath for 10 minutes.

7. a. Remove from bath and cool for 10 minutes.

b. Inspect the solution for clarity and particulate matter. If it is cloudy or if particulates are present do not use.

8. Label the vial and store at room temperature. Use within six hours.

9. Radiochemical purity must be checked prior to use. If the radiochemical purity is less than 90% do not use.

#### QUALITY CONTROL

#### PREPARATION OF SEP-PAK CARTRIDGE

a. Using a 3 ml syringe, push 1 ml of ethanol thru the cartridge; discard the eluate.

b. Push 1 ml of 0.001N HCl solution thru the cartridge; discard the eluate.

c. Push 3 ml of air thru the cartridge; discard the eluate.

#### QUALITY CONTROL TESTING

a. Using a 1 cc tuberculin syringe, withdraw a sample of MAG3 and insert 0.1 ml into the longer end of the cartridge.

b. Slowly push (dropwise) 3 ml of 0.001N HCl solution thru the cartridge; collect the eluate in a test tube and assay. This eluate contains the hydrophilic (TcO4) forms of radiochemical contaminate.

c. Slowly push (dropwise) 3 ml of 1:1 ethanol/saline solution thru the cartridge; collect in a test tube and assay. This eluate contains the MAG3.

d. Place the cartridge in a test tube and assay. This contains reducedhydrolyzed technetium.

#### CALCULATIONS

$$\%Tc99m - MAG3 = \frac{(Actofethanol/saline)}{(totalAct)}X100$$

$$\%TcO4 = \frac{(ActofHClelution)}{(totalAct)}X100$$

 $\% RH - Tc = \frac{(ActonCartridge)}{(totalAct)} X100$ 

11 APR 9/

## KIT PREPARATION INSTRUCTIONS

#### CARDIOLITE

1. Put on latex gloves

2. Place the reaction vial in a vial shield.

3. Swab the top of the rubber septum with isopropyl alcohol.

4. Using a syringe shield prepare 150 mCi. of Tco4 in 3 ml of normal saline.

5. Measure the activity in the syringe and prepare a product ticket.

6. Add the TcO4 to the reaction vial and withdraw an equal volume headspace. 7. Swirl the vial several times.

8. Place the vial in a boiling water bath for 10 minutes.

9. Remove the vial from the water bath, shield, and cool for 15 minutes.

- 10. Visually inspect the vial contents. It must be clear and colorless.
- 11. Use within 6 hours.

#### 12. RADIOCHEMICAL QC

a. Use Aluminum Oxide coated plastic TLC plate (Baker # 1 B-F)

b. Apply 1 drop of ethanol 1.5 cm up the strip.

- c. Immediately add 2 drops of cardiolite side by side on the ethanol.
- d. Evaporate to dryness with compressed air line.
- e. Place the strip in a covered TLC tank containing ethanol.
- f. Develop the strip to within 1 cm. of the end of the strip.
- g. Calculate the % Cardiolite as follows:

 $\%Tc99m-Sestamibi = \left(\frac{(uCiTop)}{(uCiTop+Bottom)}\right)X100$ 

13. Illustration of QC step:

% Tc99m Sestamibi =  $\frac{\mu \text{Ci Top Piece}}{\mu \text{Ci Both Pieces}} \times 100$ 

JUL 1988

## Technetium-99m MEBROFENIN (CHOLETEC BY SQUIBB)

#### DIRECTIONS FOR MANUFACTURE

ľ. Assemble the following items prior to preparation: 1 vial of mebrofenin, vial shield, 3 ml syringe, normal saline without bacteriostatic agent. Latex gloves should be worn during the preparation. 2. Remove the plastic disc from the vial, swab the top of the З. vial closure with alcohol and let the alcohol dry, Place the vial in a suitable radiation shield. 4. With a sterile shielded syringe, aseptically obtain not more 5. than 100mCi TcO<sub>4</sub> solution in 2 to 5 ml. THE GOAL IS 20mCi/ml. Frint appropriate calibrator dose tickets to account for  $TcO_4$ 6. used and to create a product ticket for mebrofenin. Aseptically add the  $TcO_4$  to the vial in the lead shield and 7. withdraw an equal amount of air from the vial. Swirl the contents of the vial gently for 1 minute and LET 8. STAND FOR 15 MINUTES. Examine vial contents for particulates prior to injection. 9.

10. Check pH. ( range is 4.2 TO 5.7)

11. Perform ITLC chromatography using <u>polysilicic acid gel (SA)</u> paper with 20% saline as the solvent. Record the results. Do not use if less than 90% label.

12. USE WITHIN EIGHTEEN (18) HOURS from the time of preparation.

Nuclear Pharmacy SG8

#### Accountability of Sealed Source Markers

). Powied source markers are used in nuclear medicine to stablish anatomical position and tize of underlying structures. Therefore, markers are maintained in the nuclear medicine clinic and must be reactly available to imaging technologists.

2. In order to maintain control of these markers a log sheet is kept in the radiothanmacy. "pic log titled "SIGN OUT LOG FOR BEALED POINT & STRING SOURCES" (attached) "identifies the technologist, source, and room where the cource is used. Proper of this log will identify the location of all sealed sources it will provide an indication of use for point and string tources.

3. The log described above must be completed in a timely manner. Unis means all sources must be returned to the radiopharmacy and  $\log$  entries completed prior to the close of the business day.

4. The technologist who signs out the source is responsible for it return. However, when a source cannot be found the a bhologist working in the pharmacy or the nuclear pharmacist neuld be notified immediately.

Dr. Bruce H. Mock Division of Nuclear Medicine UH-P16 Indiana University Medical Center 926 West Michigan St Indianapolis, IN 46223

Dear Sir;

We wish to produce <sup>123</sup>I-MIBG in-house especially to image children with neuroblastoma. I have read with interest your article in Appl. Radiat. Isot.(39:939-942, 1988). If possible could I obtain a copy of your current labelling method, information regarding your source of unlabeled MIBG and requesting an IND, and suggestions toward avoiding pitfalls with this procedure. Thank you for your time and assistance.

Sincerely,

Patrick J. Peller MD Nuclear Medicine Fellow

Commander Chief, Nuclear Medicine ATTN: MAJ PELLER Walter Reed AMC Washington, DC 20307-5001

#### White Cell Separation and Labeling with In-111 Oxine

#### ALL PROCEDURES ARE DONE IN

#### THE VERTICAL HOOD

1. Collect 90ml. of venous blood in two 50-60 ml. syringes containing 1,000 units of heparin and 10 cc of 6% hetastarch (Hespan®) in each syringe (Note: If the patient has a WBC count of greater than 8 x 10<sup>3</sup>, one 50-60 ml. syringeful of blood may be drawn.)

2. Place each syringe of blood into the ringstand mount at a 45° angle. Take care not to allow the blood to come into contact with the top of the syringe as additional contamination with RBC can-result.

3. Allow the red blood cells to settle to the bottom of the syringe for at least one hour.

4. Remove supernatant (platelets, plasma and WBC's), and centri-fuge the supernatant at 450g for five minutes.

5. Pour off the supernatant. (platelets, and plasma also called platelet rich plasma or PRP) and save. Resuspend the WBC buttons with 3 ml. of normal saline using a sterile plastic pipette. Combine the two WBC suspensions in one tube and q.s. to 20 ml. with normal saline. Centrifuge at 450g for five minutes.

6. Centrifuge PRP at 1000g for twenty minutes. When finished, the supernatant is platelet poor plasma (PPP).

7. Remove supernatant and discard from step #5. Add 6 ml. of normal saline to the WBC button and resuspend with pipette.

8. Add In-111 Uxine to the WBC suspension and incubate at room temperature for twenty minutes. Gently agitate 3-4 times during incubation. (Note: The desired cose is 500 microcuries so add approximately 600-650 uCi. in-111 Gxine to the WBC suspension).

9. Add PPP to WBC suspension to bring volume up to 15 ml. and centrifuge at 450g for five minutes.

10. Four off RADIOACTIVE supernatant and save for labeling efficiency. Resuspend WBC button with 8 ml. of fresh PPP. This is the final product for reinjection into the patient.

11. Do labeling yield calculations with labeled WBC and RADIDAC-TIVE supernatant.  $\$ 

#### IN-111 LABELED PLATELET PROCEDURE WRAMC NUCLEAR MEDICINE SERVICE

1. Wipe down the laminar flow Mood with alcohol and allow to evaporate. Set up the water bath at 37 C with a lead shield.

2. Fut 10 cc of sterile normal saline in a sterile syringe and place int the hood. Draw 8 cc of acid-citrate dextrose solution A (ACD-A) into a 50 cc syringe.

3. Assemble stopcock, 50 cc syringe, one 30 cc syringe, tubing and needle. Withdraw atraumatically and aseptically 7 cc of blood and discard. Withdraw 42 cc of blood into the 50cc syringe, mixing the blood with the anticoagulant.

4. Transfer the blood to a sterile centrifuge tube directly from the syringe. Prepare a balance tube and centrifuge at 225 G (950 rpm) for 15 minutes.

5. Pipette platelet rich plasma (PRP) into a new centrifuge tube. If there is no clear separation between the PRP and red cells, risk using a few red blood cells (RBCs) and perform steps 6 and 7. Add 5 cc ACD-A solution/100 cc of PRP.

<u>Steps 6 and 7 are optional.</u> <u>Perform only if significant RBC</u> contamination of PRP is present.

6. Prepare balance tube and spin PRP at 225 G for 10 minutes.

7. Using a sterile plastic pipette, carefully withdraw the PRP into a new centrifuge tube. Take care not to transfer and RBCs.

8. Prepare the balance tube and centrifuge the PRP at 650 G (1600 rpm) for 10 minutes.

9. Separate the platelet poor plasma (PPP) with a new sterile plastic pipette and store in a sterile centrifuge tube at room temperature.

10. Add 2 cc of saline solution to the pellet. Place the tube aside and let stand at room temperature for 10 minutes. Thereafter, the button may be agitated <u>gently</u>, without frothing, to completely resuspend the cells.

11. When the pellet is completely resuspended, place the tube in the water bath, add 600 mcCi of In-111 oxine and incubate at 37 C for an additional 5 minutes.

12. Prepare a balance tube and centrifuge the resuspended platelets at 180 g (850 rpm) for 15 minutes.

13. Decant radioactive supernatant (the empty balance tube may be used). Gently layer 2 cc of saline solution over the pellet

21

#### PROCEDURE FOR LABELING HEAT DAMAGED RBCs

1. Inject patient with 15 mg Sn-pyrophosphate

2. Wait 20 minutes

 Withdraw 10ml. whole blood into a 20 ml. syringe which has been heparinized with with 100 units of sodium heparin.
 Flace 10 ml. of this whole blood into a sterile screw top tube.

5. Spin down the RBCs in a centrifuge for 5 minutes at a fast spin of 1000g (2000 rpm)

6. Using aseptic technique and a long spinal needle attached to a 10 ml. syringe, withdraw the plasma and buffy coat.

7. Add the sodium pertechnetate to the packed cells and vortex gently to resuspend the RBCs. Use 8 to 10 mCi to start and end with a final dose of  $3 \pm 0 5 \pm 0$ 

8. - Incubate for 5 minutes using proper shielding.

9. Add normal saline to bring volume up to original volume and vortex gently to resuspend the RBCs.

10. Place this solution RBCs,  $99mTcO_4$ , at original volume, in sealed screw top tube into a water bath with stirrer at <u>49</u> <u>de-</u><u>grees C for 35 minutes</u>. Make sure the level of the blood is below the water level.

11. To assure even heating, every 3 to 5 minutes lift the blood tube out of the water and invert several times and return it to the water bath.

12. Be sure to maintain the temperature below 50 degrees C. Use ice to cool off if necessary.

13. For shielding place a lead sheet around the water bath. 14. After <u>35 minutes</u> spin down this mixture to wash off any unbound pertechnetate for 5 minutes at 2000 rpm.

Withdraw the plasma with a long spinal needle.

16. Add sufficient normal saline to bring back to original volume. Vortex gently to resuspend the RBCs. Use this suspension to reinject into the patient.

Quality control step: withdraw 1 ml. of final solution. Place in a small tube with stopper. Add 2 ml. of normal saline, vortex, spin down 5 minutes at 2000rpm, withdraw supernatant. Measure the supernatant in a dose calibrotor; measure packed cells to determine tagging efficiency.

Tagging Efficiency:

 $\frac{A_r}{A_r + A_r} \times 100$ 

 $A_{r} = activity$  in QC RBC sample  $A_{b} = activity$  in QC plasma sample

#### PROCEDURE FOR LABELING RBC'S FOR GI BLEED

1. Inject patient with 15 mg of Sn-PYP(1 vial). Wait 20 minutes.

2. Withdraw 10 ml whole blood into a syringe heparinized with 100 units heparin.

3. Place 10 `ml of this whole blood into a sterile screw top tube.

4. Spin down the RBC's in a centrifuge for 5 minutes at fastest speed. Using a long needle attached to a 10 ml syringe, withdraw plasma and buffy coat layer.

5. Add the TcO4 to the packed cells. For GI bleed using approximately 28 - 30 mCi. to start with. Final dose is 20 mCi. Vortex gently.

6. Incubate for 5 minutes using proper shielding.

7. Add normal saline to bring up to original volume and vortex gently to resuspend the RBC's.

8. Spin for 5 minutes at fastest speed to wash off unbound 99m-TcO4.

9. Withdraw plasma using a long spinal needle.

10. Add sufficient normal saline to bring up to original volume and vortex to resuspend the RBC's.

11. Quality Control: Withdraw about 0.5ml of final solution. Place in small tube with stopper and add 1.5ml of normal saline. Vortex then centrifuge for 5 minutes at fastest speed. Withdraw plasma, use for channel # 18, use packed cells for # 19. The desired tag is over 90%.

#### NUCLEAR MEDICINE TECHNOLOGIST COURSE

#### TRAINING IN NUCLEAR PHARMACY AT WALTER REED ARMY MEDICAL CENTER

Program Goal: To provide education, training, and laboratory experience in nuclear pharmacy to phase two nuclear medicine technology students.

Facility:

The Nuclear Pharmacy is located in the Nuclear Medicine Service at Walter Reed Army Medical Center. The Nuclear Pharmacy provides individualized doses of diagnostic and therapeutic radiopharmaceuticals to the patient population served by the medical center. In a teaching role, the nuclear pharmacist instructs nuclear medicine residents, radiology residents, and nuclear medicine technologists in aspects of radiopharmacy appropriate for each group.

Course Description:

In order to provide a course of instruction which satisfies both academic curiosity and practical application, the curriculum must accommodate both didactic and laboratory instruction concurrently.

The following outline identifies some of the major subject areas and breaks them into manageable blocks of instruction:

SECTION TOPIC

1 SAFE USE AND HANDLING OF RADIOACTIVE MATERIALS

2 BASIC RADIATION PHYSICS alpha, beta, gamma radiation dosimetry and radiation dose

- 3 REGULATORY ASPECTS OF NUCLEAR PHARMACY NRC regulations NRC license example FDA regulations when should an IND be submitted IND form FD 1571 How to write an IND
- 4 EQUIPMENT NECESSARY IN A NUCLEAR PHARMACY dose calibrators (ion chambers) well counters (scintillation counting)

| C                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

6

In order to allay what recently has been increasing confusion regarding patients who seemingly appearing unannounced to the Nuclear Medicine Service for treatment the following guidelines are being implemented.

1. Endocrine physician communicates personally with a Nuclear medicine service physician

A. This is imperative so that points of contact and continuity for the treatment of this patient is established on both services.

B. Joint discussion of treatment goals and projected dosage

C. One physician from each service to serve as points of contact and who will manage the therapy.

#### 2. Nuclear medicine worksheet generated (sample attached)

A. This worksheet serves three purposes

1. A check list of the necessary information necessary prior to treatment.

particularly high dose inpatient treatment

2. Provides a planning and scheduling document to insure that the Nuclear medicine service is prepared for the patient when he or she arrives

3. A reference source for both the Endocrine and Nuclear medicine services

a. Documents the communication referred to in paragraph (1 above)

b. In the event the Nuclear medicine physician who initially discussed the case is not available will allow another physician to intelligently take over the treatment.

4. These while be kept in a notebook in the reading room until the treatment has been completed

#### 3. Pharmacy notified by only by NM physician

A. Date of treatment and projected dose

B. To insure that the necessary quantity of I131 is available when the patient presents him or herself for treatment.

C. Endocrine and Nuclear Medicine physicians names attached to request to further ensure continuity of management.

#### 4. Pharmacy arranges with Health Physics Office for inpatient Rx

A. To insure that the room(s) are available at the time of the proposed treatment.

1. The Thyrotropin Releasing Hormone (TRH) stimulation test should be ordered on the Nuclear Medicine consult form or the standard consultation form 513. This must be signed by a physician and acts as the official request and prescription. (Technologist or Physician Assistant signatures must be co-signed.)

CMT 1

Dr. Anderson/af/60176

2. The consult does not have to be approved (or "OD") by a Nuclear Medicine physician.

3. Prior to the administration of the TRH, the Nuclear Medicine technologist will take the blood pressure in the semi-supine position. If the diastolic blood pressure is equal to or greater than 105, than the study is terminated. For these cases, the Nuclear Medicine technologist should write on the consult, that "the diastotic blood pressure was greater than or equal to 105 mm Hg. Because this is a relative contraindication, the test was cancelled. If any questions, please call laboratory. In all cases, the Nuclear Medicine technologist should write the blood pressure on the consult. The Nuclear Medicine technologist should also ask the patient if he/she has had any previous reaction to a TRH test. If the patient has had a reaction, then the technologist should contact the O.D. physician for a decision regarding whether to proceed or not.

4. See the Nuclear Medicine Clinic signature sheet in the Laboratory Book #1 for the list of physicians and technologists authorized to inject TRH.

5. For the TRH injection, the patient should be in a semi-supine or supine position in the appropriate blood drawing "couch". If any reaction occurs, than the Nuclear Medicine O.D. physician should be contacted immediately. If no reaction has occurred within five minutes, the patient may wait in the waiting chairs in the hallway outside the radioimmunoassay lab.

## STERILE PRECAUTIONS FOR VENIPUNCTURES

1. Disposable latex gloves will be worn by all personnel performing venipunctures.

2. Wash hands and change gloves each time before collecting blood from and/or injecting a radiopharmacuetical into a patient.

3. All new needles and syringes used on the Nuclear Medicine Service are sterile. When the protecting cover is removed from a new needle, the needle must not touch anything until it punctures the skin. If it should touch anything, discard it and use a new needle. Never use a needle with a broken seal.

4. Alcohol pads are used to cleanse the site of puncture. Alcohol itself may destroy some of the bacteria present, <u>but it is the rubbing that is important</u>. Rubbing with the pad removes many skin organisms. Do not touch the venipuncture site after cleansing.

5. If you did not enter a vein at one puncture site, replace the needle with a new one before attempting a second puncture. The first needle may have become contaminated and should not be used again.

6. Under no circumstances will a Hickman or Swan-Ganz catheter be entered without prior approval and knowledge of the patient's attending physician.

Jay H. Anderson COL, MC Chief, Nuclear Medicine Service

#### 99Mo ASSAY PROCEDURE

1. <u>PURPOSE</u>: The purpose of the SOP is to describe the procedure to assay a low level contamination of Molybdenum-99 in solution with 99m Technetium.

2. <u>DESCRIPTION</u>: The assay kit consists of a lead canister of the proper dimension to accept a 30 milliliter vial and an insertion holder. The characteristics of the canister are such that the 99m Tc reading is reduced to less than 10<sup>-6</sup> of the unshielded reading while the 99Mo reading is reduced by approximately 65%.

The NRC allowable level of 99Mo contamination in Technetium is NMT one part per thousand (NMT 1 uCi 99Mo/mCi 99mTc) nor more than 5 uCi 99Mo per patient dose.

The U.S.P. XX allowable limit 99Mo is not greater than 0.15 uCi per mCi of Technetium 99m per administered dose of the injection, at the time of administration.

NOTE: Because of the differences in half-lives of these two isotopes, the concentration of 99Mo will increase with time.

3. <u>RESPONSIBILITIES</u>: The Mo assay will be performed on every generator elution. In no case will 99mTc eluate be used if either limit of 99Mo contamination is exceeded. Furthermore, any 99Mo contamination level of 0.1 uCi 99Mo/mCi 99mTc will be reported immediately to the radiopharmacist or Chief of the Service for appropriate guidance.

4. ASSAY PROCEDURE: CRC-30 Dose Calibrators

a. Be sure there are no other isotopes near the calibrator.

b. Insert the CAPMAC pig (purple and yellow one) into the CAPMAC assembly. Lower the complete assembly into the well of the dose calibrator.

- c. Pust "Mo Assay" + "Activity" buttons.
- d. Set Patient Dose wheels to 0000.
- e. Dial in sample # ... Dial in sample volume.
- f. Turn key until EEEEE indicates data entry.
- g. Open the canister by holding the handle and rotating the level counterclockwise until it stops. Move the lever to the raised vertical position.
- h. Push "CAPMAC" and "Activity" buttons. Patient dose, sample #, and sample volume remain the same as in steps d, e, & f. Calibrator will display activity in mCi and then flash ----/mCi, ----/mCi.
- i. Turn the key to enter EEEE and push print (front side of dose ticket).
- j. Turn dose ticket over and enter (feed) into printer.

k. Press "Mo Assay" and "Activity" and print.

#### NUCLEAR PHARMACY "ON-CALL" PROCEDURE

Before milking the generator, check if there is enough activity left in Elution #1, #2, or #3.

If Yes: Proceed with making the product desired.

If No: Milk the #2 generator and put it in the #2 pig. (Use 10 ml elution vial.)

A single dose ticket is needed for the generator.

1. Insert the CAPMAC pig (purple and yellow one) into the CAPMAC assembly. Lower the complete assembly into the well of the dose calibrator.

2. Set the SAMPLE VOLUME and the SAMPLE NUMBER on the appropriate thumbwheel switches. Sample volume on 10.00 and the sample number on 02. The PATIENT DOSE thumbwheel should be set on all zeroes.

3. Press the button labeled MO ASSAY and the button labeled ACT. NOTE: The blinking display indicates that the operation is incomplete.

4. Rotate the ENTER KEY to register the activity.

5. Open the canister by holding the handle and rotating the lever counterclockwise until it stops. Move the lever to the raised vertical position.

6. Press the button labeled 99m Tc CAP MAC.

7. If no reading is observed, the canister is not open. Repeat step #5.

8. Rotate the ENTER KEY to register the reading. The display will stop blinking after the key is turned. Print this information on the front side of the ticket. Turn the ticket over to print on the back side.

9. Close the canister by lowering the lever to the horizontal position. Lock the canister to the base by holding the handle, pressing down and rotating the lever clockwise until it stops.

10. Remove the complete assembly from the well and remove the CAPMAC PIG from the holder.

11. Press the MO ASSAY button and the ACT button (the Patient Dose, Sample Number and the Sample Volume Buttons remain the same as in step #2).

12. PRINT on the back side of the ticket. This will give the Moly Assay.

### MUCLEAN PHARMACY CHROMATOGRAPHY PROCEDURE USING CRC-30

1. Spot a small drop of product on ITLC(Instant thin layer chromatography paper). Place in developing tank containing appropriate solvent. Let solvent migrate two-thirds the way up the strip. Using tongs remove strip from tank, mark solvent front, using scissors cut strip one half way between origin of spot and solvent front. Place in chromagraphy strip holder tube marked for top and bottom.

2. Place product ticket in printer so that chromatography results will be printed on <u>back</u> of ticket.

19

Sample Number

- 3. Press: 99m rc & Q.C. buttons.
- 4. Dial setup:

80.00

Patient Dose

use last two digits to indicate product number ie: 00.03 for Tc MAA

Place Chromatography tube with bottom strip in the dose calibrator well, let the reading stabilize then <u>Turn Key</u> to enter. Note : Be sure you see <u>EEEE</u> displayed to indicate that the information was entered.

5. Remove the Bottom tube and replace with the Top tube, let the reading stabilize, change the sample number setting to 18, turn key to enter data.

6. Print ticket.

7. Note: Display on ticket

#### PROCEDURE

#### NUCLEAR MEDICINE SERVICE DEPARTMENT OF RADIOLOGY WALTER REED ARMY MEDICAL CENTER

1. <u>PURPOSE</u>: The procedure describes the <u>MANDATORY</u> process by which a patient will be identified prior to injection of a radiopharmaceutical for diagnostic imaging purposes.

2. <u>METHOD OF IDENTIFICATION OF PATIENT</u>: All patients will be required to produce one of three forms of identification:

a. Inpatients - hospital identification bracelet.

b. Outpatients - blue clinic card or

toria in

- military/dependent identification card

The name and social security number on the identification must be matched against the name and social security number on the consult and printed dose ticket.

3. <u>METHOD OF RADIOPHARMACEUTICAL IDENTIFICATION</u>: Each and every radiopharmaceutical is assigned a unique radiopharmacy number. This number is stamped on the patient's consult, the pharmacy dose ticket, and the individual dose. Once a positive patient identification is made, the radiopharmacy number must be verified on both of the dosing documents and on the syringe. In addition, the color coded pharmaceutical sticker on the syringe should be matched against the radiopharmaceutical ordered on the consult and printed on the dose ticket.

4. Once steps 1-3 above have been completed, the radiopharmaceutical may be injected. The technologist injecting/dosing the patient must sign both the consult and dose ticket and indicate the time of dose administration.

5. <u>PROCEDURE FOR PATIENT IDENTIFICATION FOR ADMINISTRATION OF IN VITRO</u> <u>LABELLED HUMAN BLOOD PRODUCTS</u>: Steps 1-4 must be completed and verified by two people, the radiopharmacist who labelled the blood product and the technologist administering the dose. Both individuals will sign off on the documents listed in step 4.

6. Failure to follow the procedure rigorously could result in an adverse impact on patient care and as such any lapse in this procedure will result in administrative corrective measures.

#### NUCLEAR PHARMACY DAILY CHECKLIST JAN 87

- 1. Prepare elution & compounding vials & paperwork for the next day.
- 2. Integrate the 2nd copy of the dose tickets into the numerical prescription file.
- 3. Make up QC syringes for cameras.
- 4. Make up QC syringes for daily products
- 5. Close out products at the end of the day and do work count.
- 6. Check Radiopharmacy & RIA Log Book-make sure all entries have been completed.
- 7. Make up Chromotography Strips to have some on hand.
- 8. Survey work surfaces-record results in Survey Log Bk.
- 9. Restock needles, syringes, alcohol, pads, etc, in RP preparation area.
- 10. Empty rad waste-deliver to 2nd floor dock to Health
- Physics Wednesday afternoons 1330-1430 hours.
- 11. Daily calibrator check.
- 12. Order supplies.
- 13. Prepare 10 Saline and 10 Heparin Syringes
- 14. Inventory R.P. and Kits on Mondays of stock level and expiration dates.
- 15. Check and record temperature of refers. in Nuclear Pharmacy.

Applies to packages received from the Roche or Syncor radiopharmacies

### I. SURVEY OF PACKAGE:

1. Put on Latex Gloves

Mean Man And 2. Inspect the package for signs of damage. If damage is noted,

3. Measure the package at 1 meter and at the package surface. If it is greater than expected stop and notify the RPO.

|                                                                                                                                                                                                                                          | Yellow-III     | > 1 mR/hr                           | > 50 mR/hr                               |                                              |

No package shall exceed 200 mR/hr at the surface nor 10 mR/hr at 1 meter.

#### II. WIPE TEST THE PACKAGE:

1. Wipe the exterior of the package with an absorbant paper. A minimum of 4X4 inch area must be wiped.

2. Place the wipe in the Victoreen Wipe Test Counter (model 05-578). Press the "count" button. A green light indicates the wipe has less activity than the allowable threshold activity. If a red fail light is displayed proceed to section III, ANALYSIS OF WIPE TEST RESULTS

3. Wipe the surface of the radiopharmaceutical containers as in step 1 above. Count the wipe as in step 2 above<sup>2</sup>.

Remove the radiopharmaceuticals from the package and store them in their designated areas. Make sure the packing slip agrees with drugs received. Enter the survey and wipe test in the pharmacy computer system for each radiopharmaceutical received. When several radiopharmaceuticals are received in the same package the wipe test and survey results will be the same for each radiopharmaceutical.

1 Transportation Index (TI) is the radiation level in mR/hr at 1 meter from the package surface

2 NRC does not require wipe test of the interior of the package. However, it is good practice to determine if there is removable contamination on the products we receive.

 $(1, \gamma)$  ,  $(3, \gamma)$ 

37530

#### III. ANALYSIS OF WIPE TEST RESULTS:

When a wipe test fails to pass as indicated by the wipe test counter use the following procedure to ascertain the isotope and activity.

1. When a wipe test has failed the red LED light will be glowing and a value in kilo-disintegrations per minute (KDPM) will be displayed.

2. Remove the wipe from the wipe test counter and place it in a glycine paper pouch. Place the pouch in the well counter attached to the thyroid probe in the thyroid room (7A08). Run the "calibration" procedure to identify the isotope by its emission peak(s).

3. The wipe test counter is set up to read out directly for Technetium-99m in KDPM. For other isotopes it is necessary to convert the displayed KDPM into actual KDPM by using a conversion factor for the isotope. Conversion factors (C.F.) for commonly used isotopes at WRAMC nuclear medicine are as follows:

| ISOTOPE | <b>C.F.</b> |
|---------|-------------|
| I-131   | 0.13        |
| T1-201  | 1.30        |
| Ga-67   | 1,50        |
| In-111  | 0.08        |

The threshold activity for all radiopharmaceuticals received at WRAMC is 2000 dpm/ 100 cm<sup>2</sup> removable contamination. The threshold activities for the above listed isotopes are:

| I-131  | 15.3         | KDPM |
|--------|--------------|------|
| Tl-201 | 1.5          |      |
| Ga-67  | <b>`1.</b> 3 |      |
| In-111 | 25.0         |      |
|        |              |      |

Press the "threshold" button and enter the isotope threshold value using the "change digit" keys. Press the "activity key" to put into memory. Count the wipe in the usual manner described in section II. A green PASS means the contamination is less than 2000 DPM for the isotope being counted. A FAIL displays a KDPM value which must be multiplied by the C.F. to get the actual KDPM value for the wipe. For wipes which result in a FAIL indication notify the RPO.

FIRE PLAN FOR BUILDING #2 (NEW MEDICAL DREATMENT BACILITY)

FIRE ENERGENCY PROCEDURE:

Procedures must include the fellowing order of importance;

a. Rescue persons in immediate danger.

b: Report the fire immediately.

(1) Make the fire known to everyone in the immediate area,

(2) Call the Fire Department. Use the building fire alarm system. The Fire alarm system will call the Fire Department and also let everyone in the building know there is a fire. The Fire Department should also be called by telephone (dial 63317).

(3) To sound the fire alarm in the building, locate one of the RED, metal boxes mounted on the wall in the hallway and near each stairway door and pull down on the handle on the front of the box.

c. Confine the fire. Close the door to the room where the fire is located.

d. Secure the area.

(1) Close all the doors in the area.

(2) Turn OFF oxygen and gas valves.

(3) Do not allow anyone to go back into the area.

e. Fight the fire with the proper extinguisher. Use extinguishers if fire is small, for example: when the fire is just getting started, a mattress is shouldering and there is just a little smoke, or a fire in a trash can. If the room is full of smoke, GET OUT and CLOSE THE DOOR.

f. Control employees, visitors and patients. There will be visitors, patients and employees from other areas of the building who will not know what to do when a fire takes place. Keep them calm and tell them how to leave the area.

g. Meet the Fire Department and direct them to the fire.

h. Evacuation.

(1) Remove patients from toons to the hallway. From there go down the hallway until you go through the double doors dividing the hallway. Make sure these doors are closed and remain tlosed after everyone has been removed from area of the fire.

11 APR 88

PERSONNEL POLICY NO: HSHL-XN-1 SUPERSEDES: ALL OTHERS

SUBJECT: INFECTION CONTROL POLICY

1. PURPOSE: To establish guidelines for the Nuclear Medicine Service employees to minimize the risk of infection due to exposure, and prevent the transmission of infective agents to patients, co-workers and the community.

2. GENERAL:

- a. A system of berrier profection (i.e rubber gloves, gown etc) must be used to prevent skin and mucus membrane exposure to biological fluids and/or wounds etc.
- b, All skin defects (cuts, abrasions etc) must be covered with propertive bandages:
- c. Meticulous handwashing, even when gloves are used. If hands or other body surfaces become containinated, they should be washed immediately with soap and water or Hibeclens (each room has been supplied with adequate smounts of Hibeclens).
- 3. Gloves must be worn for contact with any patients' blood or body fluids. This includes fouring phiebotomy, injecting radiopharmaceuticals, etc. Body fluids includes drainage of any type, saliva, sputum, wrine etc.
- e. Gloves must be removed prior to the use of telephone, CRT's or other clean surfaces. Clean, fresh gloves may be worn.
- f. Consuming beverages or food, smoking and applying cosmetics are not permitted in the <u>clinical work</u> areas of Nuclear Medicine.
- 8. All accidents should be reported impediately to your supervisor of Chief Technologist, Appropriate Forms will be filled out (see PPN HSHL-XN-2).
- h, bood and beverages will be stored in the setrigerator marked "Staff Only" in the conference room.

HSHL-NIC

MEMORANDUM FOR: All Generators of Infectious Waste at WRAMC

SUBJECT: Proper Packaging of Infectious Waste

1. All generators of infectious waste are reminded that proper packaging procedures must be followed if the waste is to be contained from the site of origin to final disposal.

2. The Infection Control Committee and the Preventive Medicine Service offer the following guidelines for packaging of infectious waste at WRAMC.

a. All infectious waste will either be in standard boxes or in plastic needle and syringe containers.

b. Boxes should be sealed with masking or strapping tape on both top and bottom middle seams and on all four open side seams.

c. The LARGE needle and syringe containers <u>must</u> have the lids taped securely with either masking or strapping tape, since these large lids have a tendency to come open when the containers are transported.

d. The small needle and syringe containers can simply be securely closed A "snap" is generally heard when they are closed correctly.

e. Each container or box must be labeled with WRAMC FORM 801, BURN TAG. The tag must contain the point of origin and a point of contact.

3. Housekeeping personnel are currently being trained not to pick up the boxes and containers if they are not properly sealed and labeled. Additionally, Infection Control personnel will be conducting unannounced environmental rounds with housekeeping supervisors to check on packaging procedures.

4. If there are any questions or comments, please call Infection Control at 64350/51.

#### APPENDIX D (Continued)

#### Section 2

#### **METHODS FOR CALIBRATION OF DOSE CALIBRATOR**\*

All radiopharmaceuticals must be assayed for activity to an accuracy of 10 percent. The most common instrument for accomplishing this is an ionization-type dose calibrator. The instrument must be checked for accurate operation at the time of installation and periodically thereafter.

- A. Test for the following:
  - 1. Instrument constancy (daily)
  - 2. Instrument accuracy (at installation and annually thereafter)
  - 3. Instrument linearity (at installation and quarterly thereafter)
  - 4. Geometrical variation (at installation)
- B. After repair or adjustment of the dose calibrator, repeat all the appropriate tests listed above (dependent upon the nature of the repairs).
- C. Test for Instrument Constancy

トンウ

Ē

スロンとしていまし

Instrument constancy means that there is reproducibility, within a stated acceptable degree of precision, in measuring a constant activity over time. Assay at least one relatively long-lived reference source such as Cs-137, Co-57,\*\* or Ra-226\*\* using a reproducible geometry before each day's use of the instrument. Preferably, at least two reference sources (for example, 3-5 mCi of Co-57 and 100-200  $\mu$ Ci of Cs-137 or 1-2 mg Ra-226 (with appropriate decay corrections) will be alternated each day of use to test the instrument's performance over a range of photon energies and source activities.

- Assay each reference source using the appropriate instrument setting (i.e., Cs-137 setting for Cs-137).
- Measure background level at same instrument setting, or check that automatic background subtraction is operating properly when blanks are inserted in the calibrator.

- Calculate net activity of each source subtracting out background level.
- 4. For each source, plot net activity versus the day of the year on semilog graph paper.
- 5. Log the background levels.
- Indicate the predicted activity of each source based on decay calculations and the ±5 percent limits on the graph.
- 7. Repeat the procedure used for the Cs-137 source for all the commonly used radionuclide settings.
- Variations greater than ±5 percent from the predicted activity indicate the need for instrument repair or adjustment.
- 9. Investigate higher than normal background levels to determine their origin and to eliminate them if possible by decontamination, relocation, etc.
- D. Inspect the instrument on a quarterly basis to ascertain that the measurement chamber liner is in place and that instrument zero is properly set (see manufacturer's instructions).
- E. Test of Instrument Linearity

The linearity of a dose calibrator should be ascertained over the entire range of activities employed. This test will use a vial of Tc-99m whose activity is equivalent to the maximum anticipated activity to be assayed (e.g., the first elution from a new generator).

- 1. Assay the Tc-99m vial in the dose calibrator, and subtract background level to obtain net activity in millicuries.
- 2. Repeat step 1 at time intervals of 6, 24, 30, and 48 hours after the initial assay.
- Using the 30-hour activity measurement as a starting point, calculate the predicted activities at 0.
   6, 24, and 48 hours using the following table:

See ANSI N42.13-1978, "Calibration and Usage of Dose Calibrator Ionization Chambers for the Assay of Radionuclides" (American National Standards Institute, Inc., 1430 Broadway, New York, N.Y. 10018).

Cn-57 and Rs-226 are not subject to NRC licensing; the respective State agency should be consulted to determine its requirements for possessing this material.

#### DOSE CALIBRATOR CONSTANCY

1. A quality control test of the dose calibrator is required each day prior to its use to prepare radiopharmaceutical doses.

2. Use the computer generated "DOSE CALIBRATOR CONSTANCY" form to record the observations. Use the 137Cs and 57Co dose calibrator sources in the pharmacy and test each button normally used. For 137Cs, 111In, and 57Co use the following "calibration" dial settings and the "other" button:

| 137Cs | 220 |
|-------|-----|
| 111In | 303 |
| 57Co  | 112 |

For the "moly assay" button use the displayed reading times 3.5 for the observed activity.

3. In addition to the blanks provided on the form perform the following tests and adjust the dose calibrator as needed.

ZERO - With chamber empty, zero the chamber. (voltage offset control)

BACKGROUND - Acceptable range is +/- 0.1 uCi. Record this reading.

TEST - Checks the level of the high voltage battery (normal 151-152)

#### PART 35 • HUMAN USES OF BYPRODUCT MATERIAL

and safety surveys. A licensee is responsible for assuring that any change made is in compliance with the requirements of the regulations and the license.

(b) A licensee shall retain a record of each change until the license has been renewed or terminated. The record must include the effective date of the change, a copy of the old and new radiation safety procedures, the reason for the change, a summary of radiation safety matters that were considered before making the change, the signature of the Radiation Safety Officer, and the signatures of the affected authorized users and of management or, in a medical institution, the Radiation Safety Committee's chairman and the management representative.

## § 35.33 Records and reports of misadministrations.

(a) When a misadministration involves any therapy procedure, the licensee shall notify by telephone the appropriate NRC Regional Office listed in Appendix D of Part 20 of this chapter. The licensee shall also notify the referring physician of the affected patient and the patient or a responsible relative (or guardian), unless the referring physician agrees to inform the patient or believes, based on medical judgment, that telling the patient or the patient's responsible relative (or guardian) would be harmful to one or the other, respectively. These notifications must be made within 24 hours after the licensee discovers the misadministration. If the referring physician, patient, or the patient's responsible relative or guardian cannot be reached within 24 hours, the licensee shall notify them as soon as practicable. The licensee is not required to notify the patient or the patient's responsible relative or guardian without first consulting the referring physician; however, the licensee shall not delay medical care for the patient because of this.

(b) Within 15 days after an initial therapy misadministration report to NRC, the licensee shall report, in writing, to the NRC Regional Office initially telephoned and to the referring physician, and furnish a copy of the report to the patient or the patient's responsible relative (or guardian) if either was previously notified by the licensee under paragraph (a) of this section. The written report must include the licensee's name; the referring physician's name; a brief description of . the event; the effect on the patient; the action-taken to prevent-recurrence; whether the licensee informed the patient or the patient's responsible

relative (or guardian), and if not, why not. The report must not include the patient's name or other information that could lead to identification of the patient.

(c) When a misadministration involves a diagnostic procedure, the Radiation Safety Officer shall promptly investigate its cause, make a record for NRC review, and retain the record as directed in § 35.33(d). The licensee shall also notify the referring physician and the appropriate NRC Office specified in § 30.6 of this part in writing on Form NRC--1 within 15 days if the misadministration involved the use of byproduct material not intended for medical use, administration of a dosage five-fold different from the Intended dosage, or administration of byproduct material such that the patient is likely to receive an organ dose greater than 2 rem or a whole body dose greater than 500 millirem. Licensees may use dosimetry tables in package inserts, corrected only for amount of radioactivity administered, to determine whether a report is required.

(d) Each licensee shall retain a record of each misadministration for ten years. The record must contain the names of all individuals involved in the event (including the physician, allied health personnel, the patient, and the patient's referring physician), the patient's social security number or identification number if one has been assigned, a brief description of the event, the effect on the patient, and the action taken, if any, to prevent recurrence.

(e) Aside from the notification requirement, nothing in this section affects any rights or duties of licensees and physicians in relation to each other, patients, or responsible relatives (or guardians).

#### § 35.49 Suppliers.

A licensee may use for medical use only:

(a) Byproduct material manufactured, labeled, packaged, and distributed in accordance with a license issued pursuant to the regulations in Part 30 and §§ 32.72, 32.73, or 32.74 of this chapter or the equivalent regulations of an Agreement State;

(b) Reagent kits that have been manufactured, labeled, packaged, and distributed in accordance with an approval by the Commission pursuant to § 32.73 or an Agreement State under equivalent regulations for the

٨

preparation of radiopharmaceuticals for medical use; and

(c) Teletherapy sources manufactured and distributed in accordance with a license issued pursuant to Part 30 of this chapter or the equivalent regulations of an Agreement State.

#### Subpart C—General Technical Requirements

## § 35.50 Possession, use, calibration, and check of dose calibrators.

(a) A medical use licensee authorized to administer radiopharmaceuticals shall have in its possession a dose calibrator and use it to measure the amount of activity administered to each patient.

(b) A licensee shall:

(1) Check each dose calibrator for constancy with a dedicated check source at the beginning of each day of use. To satisfy the requirement of this paragraph, the check must be done on a frequently used setting with a sealed source of not less than 10 microcuries of radium-228 or 50 microcuries of any other photon-emitting radionuclide;

(2) Test each dose calibrator for accuracy upon installation and at least annually thereafter by assaying at least two sealed sources containing different radionuclides whose activity the manufacturer has determined within 5 percent of its stated activity, whose activity is at least 10 microcuries for radium-226 and 50 microcuries for any other photon-emitting radionuclide, and at least one of which has a principal photon energy between 100 keV and 500 keV;

(3) Test each dose calibrator for linearity upon installation and at least quarterly thereafter over the range of its use between the highest dosage that will be administered to a patient and 10 microcuries; and

(4) Test each dose calibrator for geometry dependence upon installation over the range of volumes and volume configurations for which it will be used. The licensee shall keep a record of this test for the duration of the use of the dose calibrator.

(c) A licensee shall also perform appropriate checks and tests required by this section following adjustment or repair of the dose calibrator.

(d) A licensee shall mathematically correct dosage readings for any geometry or linearity error that exceeds 10 percent if the dosage is greater than 10 microcuries and shall repair or replace the dose calibrator if the accuracy or constancy error exceeds 10 percent.

(e) A licensee shall retain a record of each check and test required by this

The staff is developing this form and will make it available before the effective date of this regulation A notice of its availability will be published in the Federal Register.

authorize departures from the manufacturer's instructions for eluting the generator or preparing the therapy kit.

#### Section 30.34 Terms and Conditions of Licenses

Commercial nuclear pharmacies are licensed pursuant to 10 CFR part 30, "Rules of General Applicability to **Domestic Licensing of Byproduct** Material." These licensees are required by a license condition similar to § 35.200(b) to elute generators and prepare reagent kits in accordance with the manufacturer's instructions. The NRC believes that authorized users obtaining radiopharmaceuticals from commercial nuclear pharmacy licensees should not be bound by this restriction in the commercial nuclear pharmacy license. Therefore, the NRC is amending 10 CFR 30.34, "Terms and Conditions of Licenses," to permit actions within the scope of those permitted by the new § 35.200(c). For situations not within the scope of the amended § 30.34, a commercial nuclear pharmacy licensee may file an application to have its license amended to permit specific departures from the manufacturer's instructions for identified products.

Under the interim rule, commercial nuclear pharmacy licensees would no longer be bound by the requirement in their licenses to follow the manufacturer's instructions for a radiopharmaceutical for which the FDA has approved an NDA if they have a written directive made by an authorized user physician directing a specific departure for a particular patient, or patients, or for a radiopharmaceutical, and which includes the specific nature of the departure, a precise description of the departure, and why the departure from the manufacturer's instructions would obtain medical results not otherwise attainable or would reduce medical risks to particular patients because of their medical condition. As in § 35.200(c), there is an exception to the requirement for a written directive before preparing the

radiopharmaceutical in an emergency situation if an authorized user physician determines that a delay in obtaining the written directive would jeopardize the patient's health. In this case, the commercial nuclear pharmacy licensee shall obtain the written directive from the authorized user physician within 3 working days of the prescribed departure. The directive must contain information regarding the emergency and all other required information. Licensees shall keep those records in an auditable form and available for inspection for 5 years. These amendments to § 30.34 take precedence over the restrictive conditions [*i.e.*, on eluting generators and preparing reagent kits for NDA radiopharmaceuticals) in the licenses of commercial nuclear pharmacies. Therefore, those parts of the license conditions no longer apply during the 3year period when the interim rule is in effect. This interim rule does not address departures from IND generator elution instructions or IND protocol directions for reagent kit preparation, thus licensees shall continue to follow the IND instructions.

#### Continuing Applicability of Regulatory Requirements

The NRC notes that this interim rule does not relieve licensees from the requirements to comply with other applicable NRC, FDA; and other Federal or State regulations or NRC orders or license conditions concerning possession or use of byproduct material for medical use or other purposes as specified in 10 CFR parts 30, 32, 33, and 35. Moreover, if a radioactive biologic receives a product license approval (PLA), this interim rule does not authorize departures from the manufacturer's instructions for preparing the biologic. In addition, if a kit or generator for a radiopharmaceutical for therapy receives an approved NDA, this interim rule does not authorize departures from the manufacturer's instructions for eluting the generator or preparing the therapy kit. Neither of these approvals exists at this time and neither is authorized by current regulations.

#### Radiation Safety Responsibilities of Medical Use Licensees

NRC medical use licensees are required by § 35.21 to appoint a Radiation Safety Officer (RSO) responsible for implementing the licensee's radiation safety program. The licensee is required, through the RSO, to ensure that radiation safety activities are being performed in accordance with approved procedures and regulatory, requirements in the daily operation of the licensee's byproduct material program. Nothing in this rulemaking relieves the licensee from complying with the requirements of § 35.21.

In accordance with 10 CFR 35.22, NRC medical institution licensees are required to establish a Radiation Safety Committee (RSC) to oversee the use of byproduct material. The duties of the RSC are specified in § 35.22(b) and include reviews, on the basis of safety, of numerous aspects of a licensee's use of byproduct material. Nothing in this Fulemaking relieves the licensee from complying with the requirements of \$ 35.22.

#### VI. Administrative Statements

#### Finding of No Significant Environmental Impact: Availability

The Commission has determined under the National Environmental Policy Act of 1969, as amended, and the Commission's regulations in subpart A of 10 CFR part 51 that these amendments are not a major Federal action significantly affecting the quality of the human environment and therefore an environmental impact statement is not required. This interim rule amends NRC regulations to permit licensees who elute generators and prepare reagent kits to depart from the manufacturer's instructions if those persons have a written directive made by an authorized user physician that requests a specific departure for a particular patient, or patients, or for a radiopharmaceutical. This directive must provide the specific nature of the departure, a precise description of the departure, and the reasons why the departure from the manufacturer's instructions would obtain medical results, diagnostic or therapeutic, not otherwise attainable or would reduce medical risks to particular patients because of their medical condition. The amendment does not address departures from IND generator elution instructions or IND protocol directions for reagent kit preparation. The NRC is also modifying its regulations to permit, if certain requirements are met, the therapeutic use of radiopharmaceuticals without following the package instructions regarding indications and method of administration. The interim rule does not affect the exemption in 10 CFR part 20 for the intentional exposure of patients to radiation for the purpose of medical diagnosis and therapy.

Although the rule may cause some patients to be exposed to higher or lower levels of radiation than otherwise expected, those exposures would be given to obtain medical results not otherwise attainable or to reduce other risks to the patient. It should be noted that current requirements do not limit the radiation dose prescribed by the authorized user physician for either diagnosis or therapy. The amendments would not relieve licensees from meeting the requirements in 10 CFR parts 20 and 35 that restrict radiation exposure to medical care personnel in the restricted area or to the general public in the unrestricted area, or radioactive effluent releases. It is expected that there would be no

#### MEMORANDUM FOR: Nuclear Medicine Service

5 Feb 91

Subject: Departure from FDA radiopharmaceutical kit preparation and use guidelines to satisfy NRC interim 10 CFR 35.200 requirements.

1. Radiopharmaceuticals will be used in pediatric patients if, in the opinion of the prescribing physician, the benefit of the procedure outweighs the risks from exposure to ionizing radiation. The radiopharmaceutical dose will be determined by the current clinic guideline for pediatric doses.

2. Technetium radiopharmaceutical kits (DTPA, MDP, Sulfur Colloid) prepared in the nuclear pharmacy may be used for an eight hour period from preparation time provided they meet USP radiochemical standards. Tc-DMSA may be used for two hours after preparation provided radiochemical QC is determined to meet USP standards for each dose prepared. The nuclear pharmacist will be responsible for periodically monitoring the radiochemical stability of radiopharmaceutical kits after normal expiration. Preparation of additional kits when the current drug remains useful is an unnecessary expense and exposes personnel to additional radiation.

JAY H. ANDERSON

COL, MC Chief, Nuclear Medicine Svc
#### APPENDIX N

#### Model Procedure for Area Surveys (See § 35.70.)

You may use the following model procedure to perform area surveys. If you willow the model procedure, you may say on your application, "We will establish and implement the model procedure for area surveys that was published in to Regulatory Guide 10.8, Revision 2."

You may develop your own procedure for review. If you do so, you should identified for inclusion all the features in the model procedure and carefully review the requirements of § 35.70. Say on your application, "We have developed mervey procedures for your review that are appended as ATT 10.12," and append mer survey procedures.

#### **COEL** PROCEDURE

#### moient Dose Rate Surveys

- **Survey Areas** 
  - a. In radiopharmaceutical elution, preparation, and administration areas, survey at the end of each day of use with a radiation detection survey meter. If diagnostic administrations are occasionally made in patients' rooms and special care is taken to remove all paraphernalia, those rooms need not be surveyed.
  - b. In laboratory areas where only small quantities of gamma-emitting radioactive material are processed (less than 200 microcuries at a time), survey monthly with a radiation detection survey meter.
  - c. In radiopharmaceutical storage and radiopharmaceutical waste storage areas, survey weekly with a radiation detection survey meter.
  - d. In sealed source and brachytherapy storage areas, survey quarterly with a radiation measurement survey meter.
- Immediately notify the RSO if you find unexpectedly high or low levels.

#### **Len**ovable Contamination Surveys

- 1. Survey Areas
  - a. In radiopharmaceutical elution, preparation, and administration areas, survey weekly for removable contamination. If diagnostic administrations are occasionally made in patients' rooms and special care is taken to remove all paraphernalia, those rooms need not be surveyed.
  - b. In laboratory areas where only small quantities of photon-emitting radioactive material are processed (less than 200 microcuries at a time), survey monthly for removable contamination.

MEMORANDUM FOR: WRAMC Nuclear Medicine Professional and Technical Staff

SUBJECT: Time Period for cessation of Breast-Feeding after a Nuclear Medicine Procedure

International Council on Radiation Protection (ICRP) publication 52,  $\underline{P_{1}}_{2}$ tection of the Patient in Nuclear Medicine, makes specific suggestions on the time period a nursing mother should cease breast-feeding after a nuclear medicine procedure. Three groups of radiopharmaceuticals used at WRAMC have been identified with different "stop nursing" times:

GROUP I - <u>Stop nursing for at least 3</u> weeks<sup>1</sup>

All 131I - and 125I radiopharmaceuticals except hippuran.

67Ga, 201Tl

GROUP II - <u>Stop nursing for at least 12</u> hours  $^{131I}$ ,  $^{125I}$ , and  $^{123}I$  hippuran

All <sup>99m</sup>Tc-compounds except labelled -RBCs, -phosphonates, and -DTPA

GROUP III - <u>Stop nursing for at least 4</u> hours

All <sup>99m</sup>Tc-RBCs, -phosphonates, and -DTPA

A. ANDERSON

COL, MC Chief, Nuclear Medicine Service

1 This implies normally that nursing will have to be discontinued.

#### WALTER REED ARMY MEDICAL CENTER NUCLEAR MEDICINE SERVICE

#### TO ALL FEMALE PATIENTS BETWEEN 12 AND 55 YEARS OF AGE:

#### Patient's Name (Please print)

Sponsor's Social Security #

#### Study Date:

Like many other x-ray procedures, Nuclear Medicine scans are not usually performed if you have a reasonable chance of being pregnant. To determine this, please answer the following questions.

YES ŃO

 \_\_\_\_\_\_Are you breast feeding?

 \_\_\_\_\_\_Are you post-menopausal (mensutral cycle)?

 \_\_\_\_\_\_Was your last menses (period) within the last 10 days?

 \_\_\_\_\_\_Was your last menses (period) within the last 10 days?

 \_\_\_\_\_\_Was your had a tubal ligation (tubes tied)?

 \_\_\_\_\_\_Wave you had a hysterectomy (uterus removed)?

 \_\_\_\_\_\_Are you on birth control pills (BCP)?

 \_\_\_\_\_\_Do you used an IUD (intra-urine device)?

 \_\_\_\_\_\_Are you pregnant?

or .

# Physician Signature

After consultation with this patient, it is my impression that the likelihood of her being pregnant is small (less than or equal to the likelihood with BCPs/IUD) and does not warrant cancelling or rescheduling the study.

#### I-131 CHEST SURVEY PATIENT INFORMATION SHEET

Your Endocrinology or Nuclear Medicine physician has requested an I-131 chest survey which is to localize any remaining thyroid tissue in your neck or chest. This study requires significant preparation and time on your part which should be carefully adhered to for maximum results. This is described below and the total preparation time, scanning time, and if necessary, I-131 treatment time is two months.

Your I-131 chest survey is scheduled for \_\_\_\_\_\_ and if necessary, an
 I-131 treatment will be performed on the subsequent Monday of \_\_\_\_\_\_.

2. Your thyroid hormone (for example Synthroid or desicated thyroid USP) should be discontinued 5 weeks prior to the above date for your I-131 chest survey.

3. Upon discontinuation of the above medication, you should begin Cytomel 25 mcg orally twice daily. Your physician should give you a prescription for such and this should be discontinued 2 weeks prior to the above date for your I-131 chest survey. You will be on no thyroid medication for the last 2 weeks.

4. You should not have any x-ray contrast study (if in doubt ask physician), seafood, iodine containing drugs (SSKI, Lugol's Betadine) for two months prior to study. Your physician may want you to adhere to a low iodine diet during this time and this should be discussed with him.

5. Report to the Nuclear Medicine Clinic at the above appointed time which is usually Monday to have thyroid blood tests drawn and for the oral administration of radioactive iodine. This will take approximately 30 minutes to 1 hour.

7. On the 6th day after you have received the radioactive iodine, report between 0900 and 1400 to the nursing station of the Kyle Metabolic Unit (Ward 47, 4th floor) for final thyroid blood tests.

8. A decision regarding radioactive iodine treatment will be made usually by the following Monday after the images and blood tests are obtained.

a. If treatment is <u>not elected</u>, you will have completed your evaluation. Follow-up I-131 chest survey in 6 months to 1 year should be scheduled before you go home. You should not wait to schedule this! You may begin your thyroid hormone according to the schedule recommended by your primary physician.

b. If low dose treatment is recommended, and if you elect such, then you will be treated at a time convenient to you, the Endocrinology staff and the Nuclear Medicine radiopharmacist. You may begin thyroid medication after the treatment according to the schedule recommended by your primary physician. Usually this is 2-3 days after treatment and may include a brief initial interval on Cytomel as well as thyroxine. In addition, you will be scheduled for a scan 7-10 days after the treatment dose.

Updated September 1985

#### I-131 DOSIMETRY/CHEST SURVEY/TREATMENT PROCEDURE

Your Endocrinologist and Nuclear Medicine physicians have requested a procedure to determine the "treatment dose" of radioactive iodine you should take to treat your thyroid cancer. The procedure estimates the largest dose we can give to destroy thyroid cancer without significantly increasing the risk of radioactive iodine to you. Because the procedure is very important for you and because it is time consuming and complex, it is very important that the procedure be performed as ideally as possible. This requires significant work on your part to assure the best results possible.

A schedule of events is listed on the attached sheet. The column on the left is what you need to do and the column on the right is what the technicians will do. Dates are all determined based on the day you receive your "small tracer dose" of radioactive iodine which is \_\_\_\_\_. Updated September 1985

After computer calculations of data, a dose will be determined and ordered. This time delay is necessary to count blood and urine specimens, calculate data, make decisions, and order the radioactive iodine. You will then be admitted to the hospital. Please read the attached booklet "The Patient's Guide to Iodine I-131 Therapy" explaining treatment in the hospital. Arrive in the AM of the day of admission and plan on staying 5 days. On the day of discharge from the hospital. begin regular diet and thyroid hormone unless notified otherwise. Thyroid hormone should be started according to one of the following schedules (circled), unless notified otherwise:

REGULAR REPLACEMENT: Begin taking the same dose each day that you were on prior to this study.

SLOW REPLACEMENT: Begin taking .05 mg/day for 7 days. Then increase dose to .10 mg/day for 7 more days. Continue to increase dose each week by .05 mg/day until you are taking the same dose you were on prior to this study.

The technician/physician will notify you of a time to return to the Nuclear Medicine Clinic for further lung and body images between the above days. Anticipate 2-3 hours. No injection or blood drawing will be done. Schedule patient at reception desk for a post-treatment I-131 chest survey 7-10 days after treatment. Notify patient of time and day.

|      | Dose        | Come to Nuclear Medicine<br>Clinic by 1000 to receive<br>tracer dose of radioactive<br>iodine. Plan to spend from<br>1000-1200 and from 1400 to<br>1600 in the Nuclear Medicine<br>Clinic. You may eat a light<br>breakfast.<br>After you receive your dose,<br>you must save <u>ALL</u> your urine.<br>You will be given urine<br>bottles to collect urine in,<br>and you should collect all<br>urine for each 24 hour period<br>from noon until noon of the<br>next day in one bottle. At<br>noon the next day, you will<br>turn in the urine bottle.<br>Then begin collecting urine<br>in the new bottle. | <ol> <li>Prepare I-131 radiopharmaceutical<br/>standard. See full procedure.</li> <li>Determine and record exact dose.</li> <li>Dose patient with 5 mCi noting exact<br/>time of administration. Give patient<br/>urine bottle labeled with name, #,<br/>date, and time.</li> <li>Perform uptake probe counts of whole<br/>body at time 0. See full procedure.</li> <li>Give 2 packages of lemon drops or<br/>equivalent to patient.</li> <li>4 hours after dose, draw 5 ml of<br/>heparinized blood. Label tube with<br/>patient name, number, date, time and give<br/>to lab.</li> <li>Perform uptake probe counts at 4 hrs.</li> </ol> |
|      |             | In addition, you will be<br>scheduled for a "post I-131<br>treatment" scan 7-10 days after<br>treatment dose. This is highly<br>recommended as it allows a chest<br>survey to be performed after a<br>large dose of radioactive iodine.<br>One may be able to detect other<br>remaining thyroid tissue which<br>had not previously been noted.                                                                                                                                                                                                                                                               | ۰. ۰. ۰.<br>۱. ۰.<br>(                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

#### NECK AND CHEST SURVEY CHECKLIST

PRIOR TO DOSING THE PATIENT WITH 1-131, THE FOLLOWING CHECKLIST MUST BE COMPLETED.

\_\_\_1. Lab slip(s) prepared for the following studies. •

TSH THYROGLOBULIN BHCG CBC

2. Patient to lab for blood drawing

3. Pathologist's report in patient's film jacket verifying patient's malignancy and/or extent of previous thyroid surgery. If uncertain, check with O.D. physician.

#### IMPORTANT INFORMATION

# DO NOT REFRIGERATE MPI KIDNEY REAGENT

#### (Stannous Dimercaptosuccinic acid)

Ampuls should be checked for discoloration and presence of particulate matter prior to labeling with sodium pertechnetate Tc 99m. Do not use if the solution is discolored or contains particulates.

Small quantities of hydrogen sulfide may be produced from the aqueous dimercaptosuccinic acid (DMSA), resulting in an upleasant odor when the ampul is opened. These small quantities of hydrogen sulfide have not been associated with adverse reactions or alterations in the in vivo distribution of the labeled reagent.

For further information, or to notify Medi-Physics, Inc. of a discolored ampul or one containing particulates, use our toll-free numbers:

License No. 08- ©1738-02 Docket No. 030-01317 Control No. 121438

Colonel Peter H. Myers Department of the Army Headquarters, U.S. Army Medical Command 2050 Worth Road/MCHO-CL-W Fort Sam Houston, Texas 78234-6000

Dear Colonel Myers:

This refers to your amendment request dated February 28, 1995 for the abovereferenced license. Enclosed with this letter is the amended license.

Please review the enclosed document carefully and be sure that you understand and fully implement all the conditions incorporated into the amended license. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region I office, the Licensing Assistance Section, (610) 337-5093 or 5239, so that we can provide appropriate corrections and answers.

Thank you for your cooperation.

Sincerely,

# **ORIGINAL SIGNED BY:**

Francis M. Costello, Chief Medical Licensing Section Nuclear Materials Safety Branch Division of Radiation Safety and Safeguards

Dear Sir:

Enclosed are two copies of a request to amend Byproduct Material License Number 08-01738-02, Walter Reed Army Medical Center, Washington, DC. The request for amendment is being submitted to redesignate the Chariman of WRAMC's Radiation Control Committee.

Recommend approval.

Sincerely,

Peter H. Ayers Colonel, U.S. Army Radiological Hygiene Consultant to The Surgeon General

## MEMORANDUM FOR Commander, US Army Medical Command, ATTN: MCHO-CL-W/COL Myers, 2050 Worth Road, Fort Sam Houston, Texas 78234-6000

SUBJECT: Request for Amendment of NRC Commission License Number 08-01738-02

1. Request that Nuclear Regulatory Commission License Number 08-01738-02 issued to Walter Reed Army Medical Center, Washington, D.C., be amended to appoint COL George J. Brown as the new Chairman of the Radiation Control Committee. COL Joan T. Zajtchuk, the previous Chairman named on our License, has departed. COL George J. Brown has replaced COL Zajtchuk. COL Brown is the Deputy Commander for Clinical Services (DCCS). The DCCS position is a senior level executive managements position, one level below the Commander, Walter Reed Army Medical Center (WRAMC). The members of the WRAMC Radiation Control Committee have reviewed COL Brown's curriculum vitae, and have recommended his approval as Chairman. COL Brown's curriculum vitae are enclosed.

2. Any questions or comments pertaining to this request should be directed to COL William B. Johnson, Chief, Health Physics Office, Walter Reed Army Medical Center, Washington DC 20307-5001, at Commercial Phone (301) 427-5161 or DSN 291-5151.

|                                          | (v)         | they are not designed to emit alpha pa<br>being used. However, when they are re                                                                          | rticles, are in storage, and are not                   |  |  |  |

- being used. However, when they are removed from storage for use or transfer to another person, and have not been tested within the required leak test interval, they shall be tested before use or transfer. No sealed source or detector cell shall be stored for a period of more than 10 years without being tested for leakage and/or contamination.
- F. The test shall be capable of detecting the presence of 0.005 microcurie of radioactive material on the test sample. If the test reveals the presence of 0.005 microcurie or more of removable contamination, a report shall be filed with the U.S. Nuclear Regulatory Commission and the source or detector cell shall be removed immediately from service and decontaminated, repaired, or disposed of in accordance with Commission regulations. The report shall be filed within five days of the date the leak test result is known with the U.S. Nuclear Regulatory Commission, Region I, ATTN: Chief, Nuclear Materials Safety Branch, 475 Allendale Road, King of Prussia, Pennsylvania 19406. The report shall specify the source or detector cell involved, the test results, and corrective action taken.

- G. The licensee is authorized to collect leak test samples for analysis by the licensee. Alternatively, tests for leakage and/or contamination may be performed by persons specifically licensed by the Commission or an Agreement State to perform such services.
- 17. Sealed sources or detector cells containing licensed material shall not be opened or sources removed from source holders by the licensee.
- 18. The licensee is authorized to hold radioactive material with a physical half-life of less than 65 days and Sulfur 35, Cobalt 58, Iridium 192, Scandium 46, for decay-in-storage before disposal in ordinary trash, provided:
  - A. Waste to be disposed of in this manner shall be held for decay a minimum of ten half-lives.
  - B. Before disposal as ordinary trash, the waste shall be surveyed at the container surface with the appropriate survey instrument set on its most sensitive scale and with no interposed shielding to determine that its radioactivity cannot be distinguished from background. All radiation labels shall be removed or obliterated.

MAY 28 1996

Colonel Eric G. Daxon, Ph.D., CHP Department of the Army Headquarters, U.S. Army Medical Command Preventive Medicine and Wellness Division 2050 Worth Road\MCHO-CL-W Fort Sam Houston, TX 78234-6000

Dear Colonel Daxon:

This refers to your license amendment request. Enclosed with this letter is the amended license. Please note that as part of this amendment, in accordance with 10 CFR 30.36, effective February 15, 1996, the expiration date of your license has been extended by a period of five years. Your new expiration date is stated in Item 4 of the license.

Please review the enclosed document carefully and be sure that you understand and fully implement all the conditions incorporated into the amended license. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region I Office, Licensing Assistance Team, (610) 337-5093 or 5239, so that we can provide appropriate corrections and answers.

Thank you for your cooperation.

Sincerely, Original Signed By

Tara Weidner

22 January 1996

MEMORANDUM FOR Commander, US Army Medical Command, ATTN: MCHO-CL-W/LTC(P) Daxon, 2050 Worth Road, Fort Sam Houston, Texas 78234-6000

SUBJECT: Request for Amendment of NRC Commission License Number 08-01738-02

1. Request that Nuclear Regulatory Commission License Number 08-01738-02 issued to Walter Reed Army Medical Center, Washington, D.C., be amended to appoint COL John R. Pierce as the new Chairman of the Radiation Control Committee. COL George J. Brown, the previous Chairman named on our License, has departed. COL John R. Pierce has replaced COL Brown. COL Pierce is the Deputy Commander for Clinical Services (DCCS). The DCCS position is a senior level executive management position, one level below the Commander, Walter Reed Army Medical Center (WRAMC). The members of the WRAMC Radiation Control Committee have reviewed COL Pierce's curriculum vitae, and have recommended his approval as Chairman. COL Brown's curriculum vitae are enclosed.

2. Any questions or comments pertaining to this request should be directed to COL William B. Johnson, Chief, Health Physics Office, Walter Reed Army Medical Center, Washington DC 20307-5001, at Commercial Phone (301) 427-5161 or DSN 291-5161.

Docket No. 030-01317 Control No. 125557 License No. 08-01738-02

William B. Johnson Colonel, U.S. Army Radiation Protection Officer Department of the Army Walter Reed Army Medical Center (WRAMC) MCHL-HP/Health Physics Office Building 41, Room 38 Washington, DC 20307-5001

Dear Colonel Johnson:

This refers to your license amendment request. Enclosed with this letter is the amended license. The facilities at The Walter Reed Army Institute of Research Animal Holding Facility and the U.S. Army Institute of Dental Research Facility, Fort Meade, MD may be released for unrestricted use.

Please review the enclosed document carefully and be sure that you understand and fully implement all the conditions incorporated into the amended license. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region I Office, Licensing Assistance Team, (610) 337-5093 or 5239, so that we can provide appropriate corrections and answers.

Thank you for your cooperation.

Sincerely,

**ML10**

#### DEPARTMENT OF THE ARMY NORTH ATLANTIC REGIONAL MEDICAL COMMAND WASHINGTON, DC 20307-5001

March 17, 1998

030-01317

REPLY TO ATTENTION OF Preventive Medicine Services

SUBJECT: Amendment Request to Remove the U.S. Army Institute of Dental Research Facility, and the Walter Reed Army Institute of Research Animal Holding Facility, Fort Meade, MD from NRC Byproduct Materials License 08-01738-02

Nuclear Regulatory Commission, Region I Division of Nuclear Material Safety 475 Alendale Road King of Prussia, Pennsylvania 19406-1415

Medical Licensing Division :

The Center for Health Promotion and Preventive Medicine has completed the decommissioning for the U.S. Army Institute of Dental Research Facility, Fort Meade, MD. The decommissioning of the buildings included a historical records investigation, meter surveys, and swipe surveys as recommended in NUREG/CR-5849, Manual for Conducting Radiological Surveys in Support of License Termination.

The Walter Reed Army Institute of Research Animal Holding Facility, Fort Meade, MD burned down in 1987 before a final decommissioning survey was performed. The only isotopes used at this location were a couple hundred microcuries of I-125 and I-131 used in a research protocol in the late 1970's. The buildings were all bulldozed into a mound and covered with earth after the fire. The Health Physics Office visited the site, and used a meter to survey the trash area, the location of the barn, and the animal holding area for any signs of radioactive materials and no meter readings above background were found. Since the half-lives of the radionuclides was so short, any radioactive iodine would have decayed away years ago.

Permanent records of all of the decommissioning surveys are maintained in the Health Physics Office files (enclosures 1 and 2).

Amend Paragraph 10, Location of Use, of NRC Byproduct Materials License 08-01738-02, to specifically remove the U.S. Army Institute of Dental Research Facility, Fort Meade, MD, and the Walter Reed Army Institute of Research Animal Holding Facility, Fort Meade, MD from the license.

For additional information regarding this amendment, please contact Colonel William B. Johnson, Chief, Health Physics Office, Preventive Medicine Services, at (202) 356-0058.

Sincerely,

William B. Johnson Colonel, U.S. Army Radiation Protection Officer

MEMORANDUM FOR Commander, U.S. Army Medical Command, ATTN: MCHO-CL-W, 2050 Worth Road, Suite 10, Fort Sam Houston, TX 78234-6010

SUBJECT: Industrial Radiation Survey No. 27-MH-7237-R-98, Facility Close-Out and Termination Survey, Fort Meade, MD, 11 August 1997-23 January 1998

1. Copies of subject report with Executive Summary are enclosed. Findings, recommendations, all specific requests by Department of the Army Licensees, Walter Reed Army Institute of Research, Base Realignment and Closure Office, U.S. Army Medical Command, the State of Maryland Bureau of Environmental Radiation, Maryland Department of the Environment, and the U.S. Environmental Protection Agency Region III representatives were addressed and staffed with the appropriate personnel assigned to support this project.

2. The final laboratory analyses of wipe test samples were completed on 8 October 1997 for the Fort Meade buildings.

#### DEPARTMENT OF THE ARMY U.S. ARMY CENTER FOR HEALTH PROMOTION AND PREVENTIVE MEDICINE 5158 BLACKHAWK ROAD ABERDEEN PROVING GROUND, MARYLAND 21010-5422

EXECUTIVE SUMMARY INDUSTRIAL RADIATION SURVEY NO. 27-MH-7237-R-98 FACILITY CLOSE-OUT AND TERMINATION SURVEY FORT MEADE, MARYLAND 11 AUGUST 1997 - 23 JANUARY 1998

1. PURPOSE. This survey was conducted to determine the presence and extent of radiological health hazards in select buildings at Fort Meade. These buildings are associated with the ongoing Base Realignment and Closure actions at Walter Reed Army Institute of Research which includes Buildings 2802, 2805, and 2813 at Fort Meade. This survey also verified that any residual radioactivity in the buildings surveyed is in compliance with the Nuclear Regulatory Commission and the State of Maryland guidelines for decontamination of facilities prior to release for unrestricted use.

2. CONCLUSION. A review of the survey results indicates that there were no radiological health hazards identified as a result of the use and storage of radioactive commodities in Buildings 2802, 2805, and 2813.

3. RECOMMENDATION. Recommend the above mentioned buildings be released for unrestricted use.

# INDUSTRIAL RADIATION SURVEY NO. 27-MH-7237-R-97 FACILITY CLOSE-OUT AND TERMINATION SURVEY FORT MEADE, MARYLAND 11 AUGUST 1997 - 23 JANUARY 1998

1. REFERENCES. See Appendix A for a list of references.

2. AUTHORITY. Telephone conversation between 1LT Luke Shattuck, RPO, Fort Meade, and Mr. Scott Kaeppel, Health Physicist, Henry M. Jackson Foundation Participant, USACHPPM, subject: Radiation Survey at Fort Meade for the Army Institute of Dental Research, 28 July 1997.

3. PURPOSE.

a. This survey was conducted to determine the presence and extent of radiological health hazards in Buildings 2802, 2805, and 2813. These buildings fall under the Nuclear Regulatory Commission (NRC) licenses for the Walter Reed Army Institute of Research, and are being turned over for unrestricted use.

b. This survey also verified that any remaining residual radioactivity in the buildings surveyed is in compliance with the NRC and the State of Maryland guidelines for decontamination of facilities prior to release for unrestricted use.

4. GENERAL.

a. Meetings and briefings were conducted by Mr. Scott Kaeppel with 1LT Luke Shattuck to discuss the findings and recommendations.

b. Project management for the close-out and termination survey was conducted by the U.S. Army Center for Health Promotion and Preventive Medicine (USACHPPM).

c. The survey was managed by Mr. Mark S. Ditmore, Research Health Physics Consultant, Henry M. Jackson Foundation Participant, USACHPPM, CPT Joseph Beckman, Nuclear Medical Science Officer (Alternate Project Manager), USACHPPM, and Mr. Andrew Perry Brown,

**Readiness thru Health** 

(3) No buildings were identified as having radiological contamination levels above the limits specified by the NRC and State of Maryland guidelines.

c. <u>Potential Contaminants and Release Guidelines</u>. See Industrial Radiation Survey Protocol No. 27-MH-7237-P-98 for a detailed listing of potential radioactive materials at Fort Meade. The release guidelines for these potential contaminants are listed in Appendix D.

6. RADIATION SURVEYS AND RESULTS.

#### a. <u>Instrumentation/Equipment</u>.

(1) A list of instruments is provided in Appendix E. The Minimum Detectable Activity (MDA) of each instrument is supplied with the instrument survey data in Appendix C. Efficiencies were determined with a radioisotope traceable to the National Institute of Standards and Technology (NIST) which had energies similar to the energies of the isotopes used and stored at Fort Meade.

(2) After calibration, an efficiency factor was calculated for each alpha and beta instrument to correlate the meter reading to the actual radioactivity present.

(3) The alpha and beta probes used for the survey were 100 square centimeter  $(cm^2)$  gas flow proportional probes. The gamma probe used was a 1 inch x 1 inch sodium iodide crystal. The equation to convert counts per minute (cpm) to disintegrations per minute (dpm) per 100 cm<sup>2</sup> can be found in the NUREG/CR-5849, page 8.2, Section 8.1.1.

(4) The efficiency value for each instrument was used to record the final reading into standardized regulatory criteria expressed in dpm/100 cm<sup>2</sup>. The monitoring values for gross alpha and gross beta in the tables of Appendix C are presented in the converted values of dpm/100 cm<sup>2</sup>.

(5) The sensitivity of the gamma survey meter correlates with NUREG/CR-5849, page 5-14, Table 5-6.

(3) No buildings were identified as having radiological contamination levels above the limits specified by the NRC and State of Maryland guidelines.

c. <u>Potential Contaminants and Release Guidelines</u>. See Industrial Radiation Survey Protocol No. 27-MH-7237-P-98 for a detailed listing of potential radioactive materials at Fort Meade. The release guidelines for these potential contaminants are listed in Appendix D.

6. RADIATION SURVEYS AND RESULTS.

a. Instrumentation/Equipment.

(1) A list of instruments is provided in Appendix E. The Minimum Detectable Activity (MDA) of each instrument is supplied with the instrument survey data in Appendix C. Efficiencies were determined with a radioisotope traceable to the National Institute of Standards and Technology (NIST) which had energies similar to the energies of the isotopes used and stored at Fort Meade.

(2) After calibration, an efficiency factor was calculated for each alpha and beta instrument to correlate the meter reading to the actual radioactivity present.

(3) The alpha and beta probes used for the survey were 100 square centimeter  $(cm^2)$  gas flow proportional probes. The gamma probe used was a 1 inch x 1 inch sodium iodide crystal. The equation to convert counts per minute (cpm) to disintegrations per minute (dpm) per 100 cm<sup>2</sup> can be found in the NUREG/CR-5849, page 8.2, Section 8.1.1.

(4) The efficiency value for each instrument was used to record the final reading into standardized regulatory criteria expressed in dpm/100 cm<sup>2</sup>. The monitoring values for gross alpha and gross beta in the tables of Appendix C are presented in the converted values of dpm/100 cm<sup>2</sup>.

(5) The sensitivity of the gamma survey meter correlates with NUREG/CR-5849, page 5-14, Table 5-6.

greater than three times above background, it would have been marked and a fixed reading taken at that point.

(4) If a building or room was classified as an "unaffected" area, a biased scan was performed over a minimum of 10% of the surface area IAW the protocol. Typically, greater than 50% of the surface area of "unaffected" surfaces was scanned at Fort Meade. During scanning, if a measured reading was found to be greater than three times above background, it would be marked and fixed meter readings (alpha, beta-gamma, and gamma) taken at that point. If no measurements were found three times above background, the surveyor took a minimum of 30 random fixed readings in the subject area.

(5) Each room was subdivided into ceilings, walls, and floors, which were further divided into grid squares. Unusual building features were surveyed in random locations and the highest values observed were recorded.

(6) All north walls were identified as Wall A (WA) and the other walls were assigned consecutive letters in a clockwise manner around the room (i.e., WB, WC, and WD). The grid squares always started in the lower left corner of the wall. The first lower 1m x 1m (affected area) meter grid square was identified as "WA1A" and the grid square directly above was designated "WA1B", with "B" representing the next horizontal row on the wall.

(7) Floors were gridded using a different system. The grid squares always started in the northwest corner of the floor. The northwest grid square was identified as FA1. The grid squares to the east would be FA2, FA3, etc. The grid squares to the south would be FB1, FC1, etc.

(8) Flag values, or action levels, for alpha and betagamma monitoring measurements were established for each type of survey instrument used. Flag values were established by taking 75% of the release criteria found in Appendix D. If any instrument reading exceeded the flag values, a more thorough investigation was conducted to determine if the detected radiation was above the established criteria.

monitored. The average background values were established at a 95% confidence level. Background survey results are presented with the site survey results in Appendix C.

(2) Instrumentation Survey Results.

(a) Alpha Instrumentation Results. The gross alpha activity ranged from a low of  $-9.1 \text{ dpm}/100 \text{ cm}^2$  to a high of 40.3 dpm/100 cm<sup>2</sup>, which was taken on a porcelain sink. A fixed meter reading was taken in each grid square at less than 0.5 cm from the surface. All alpha activity results and location of survey results are presented in Appendix C. Gross alpha analysis shows no sample data that exceeds release criteria.

(b) Beta-Gamma Instrumentation Results. A fixed meter reading was taken in each grid square at less than 0.5 cm from the surface. Instrument field data indicates high beta-gamma readings in restrooms in Buildings 2802 and 2805. The restrooms in these buildings have ceramic tiles on the floors and part of the walls, and porcelain sinks. Ceramics normally contain a high amount of naturally occurring radioisotopes of potassium. The gross betagamma activity ranged from a low of  $-307.2 \text{ dpm}/100 \text{ cm}^2$  to a high of 2878 dpm/100 cm<sup>2</sup>, which was taken on a porcelain sink. None of the field instrument readings exceed the release criteria. All betagamma survey results and locations are presented in Appendix C.

(c) Gamma Instrumentation Results. The gross gamma activity ranged from a low of -3.5 microroentgen per hour ( $\mu$ R/hr) to a high of 6.6  $\mu$ R/hr. The average gamma rate for each survey unit does not exceed the 5  $\mu$ R/hr limit. Each grid square was surveyed at approximately 1 m from the surface and the location with the highest exposure reading was recorded. All gamma survey results and locations are presented in Appendix C.

(d) Scanning Instrumentation Results. One hundred percent of the surface area of "affected areas" was scanned. The protocol states that a minimum of 10% of the surface area of "unaffected" areas will be scanned. However, the "unaffected" area scans were typically performed over greater than 50% of the surface area.

(3) Laboratory Analysis. Wipe test samples were collected and analyzed for gross alpha, gross beta-gamma, and tritium

8. RECOMMENDATION. Recommend that the surveyed buildings listed above be released for unrestricted use.
