Acceptable Surface Contamination Levels

a Where surface contamination by both alpha- and beta/gamma-emitting nuclides exists, the limits established for alpha-and beta/gamma-emitting nuclides should apply independently

 $b \rightarrow As$  used in this table dpm (disintegrations per minute) means the rate of emission by radioactive material as determined by correcting the counts per minute observed by an appropriate detector for background, efficiency, and geometric factors associated with the instrumentation.

 $c \rightarrow$  Measurements of average contaminant should not be averaged over more than 1 square meter. For objects of less surface area, the average should be derived for each such object

d→ The maximum contamination level applies to an area of not more than 100 cm<sup>2</sup> e→ The amount of removable radioactive material per 100 cm<sup>2</sup> of surface area should be determined by wiping that area with dry filter or soft absorbent paper, applying moderate pressure, and assessing the amount of radioactive material on the wipe with an appropriate instrument of known efficiency. When removable contamination on objects of less surface area is determined, then pertinent levels should be reduced proportionally and the entire surface should be wiped.

f→ The average and maximum radiation levels associated with surface contamination resulting from beta-gamma emitters should not exceed 0.2 mrad/hr at 1 cm and 1.0 mrad/hr at 1 cm, respectively, measured through not more than 7 milligrams per square centimeter of total absorber.

# QUALITY ASSURANCE RESULTS

F-1

### 1. Spiked Samples. See table below.

#### Tritium Spikes

| Position Identification | DPM<br>added | DPM<br>found | Percent<br>Recovery |
|-------------------------|--------------|--------------|---------------------|
| H-3 GA00450             | 497          | 475.9        | 95.8%               |
| H-3 GA01696             | 0            | -13.0        | N/A                 |

Note: Each sample vial was packed inside a second vial to protect from spread of contamination if broken.

a. The percent recovery of the samples was within the recommended plus or minus 20 percent (80% to 120%).

2. Blank Wipe Samples. Survey teams randomly submitted blank samples to the laboratory. Sample GA01696 was submitted as a blank. The blank sample had no detectable activity above the detection limit.

#### MEMORANDUM FOR Record

SUBJECT: WRAIR Animal Holding Facility

1. Dr. Kenneth D. Burman called at 0830 on 8 August 1997 in response to our inquiry regarding the former Walter Reed Army Institute of Research (WRAIR) Animal Holding Facility.

2. This location has been specifically listed on NRC License 08-01738-02 since 1974. This location was added because of a research protocol conducted by Dr. Kenneth Burman to administer 15 to 20 micro-curies of Iodine-125 and Iodine-131 to pregnant sheep and perform surgery on the animals at that location.

3. Dr. Kenneth Burman indicated that only 5 to 10 sheep were used in this experiment which lasted about 2 months. Dr. Burman indicated that as far as he knows that was the only protocol using radioactive materials at the WRAIR Animal Holding Facility.

4. In September 1997 CPT Morton, MSG Mason and Mr. Muick from Walter Reed Army Institute of Research visited the site and conducted a meter survey of the trash area, the location where the barn was located and the pen where the sheep were held. No contamination above background was detected.

5. A thorough records investigation and telephone interviews by CPT Morton and Mr. Burton, Health Physics Office did not find any evidence of any other use of radioactive materials at this location.

6. Additional investigators involved in this protocol were CPT Jackson, Veterinarian of the WRAIR Animal Holding Facility, Dr. Leonard Wartofsky, Associate Investigator, and CPT J.D. Fox, Veterinarian.

ARTHUR R. MORTON CPT, MS Chief, Operations, HPO

This is to acknowledge the receipt of your letter/application dated

 $\frac{3/17/98}{1000}$ , and to inform you that the initial processing which includes an administrative review has been performed.

#### 08-01738-02

There were no administrative omissions. Your application was assigned to a technical reviewer. Please note that the technical review may identify additional omissions or require additional information.

Please provide to this office within 30 days of your receipt of this card

A copy of your action has been forwarded to our License Fee & Accounts Receivable Branch, who will contact you separately if there is a fee issue involved.

Your action has been assigned **Mail Control Number** When calling to inquire about this action, please refer to this control number. You may call us on (610) 337-5398, or 337-5260.

NRC FORM 532 (RI (6-98) Sincerely, Licensing Assistance Team Leader

Docket No. 030-01317 Control No. 125704 License No.

08-01738-02

William B. Johnson Colonel, U.S. Army Radiation Protection Officer Department of the Army Walter Reed Army Medical Center (WRAMC) MCHL-HP/Health Physics Office Building 41, Room 38 Washington, D.C. 20307-5001

Dear Colonel Johnson:

This refers to your license amendment request. Enclosed with this letter is the amended license.

Please review the enclosed document carefully and be sure that you understand and fully implement all the conditions incorporated into the amended license. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region I Office, Licensing Assistance Team, (610) 337-5093 or 5239, so that we can provide appropriate corrections and answers.

Thank you for your cooperation.

Sincerely,

Original signed by Michelle Beardsley

W. Johnson Radiation Protection Officer 2

# 030-01317

#### DEPARTMENT OF THE ARMY WALTER REED ARMY MEDICAL CENTER WALTER REED HEALTH CARE SYSTEM WASHINGTON, DC 20307-5001

REPLY TO ATTENTION OF May 12, 1998

**Preventive Medicine Services** 

Nuclear Regulatory Commission, Region I Medical Licensing Division 475 Alendale Road King of Prussia, Pennsylvania 19406-1415

Dear Sir or Madam:

Walter Reed Army Medical Center (WRAMC) uses radioactive material authorized by U.S. Nuclear Regulatory Commission (NRC) Byproduct Material License number 08-01738-02 with an expiration date of June 30, 2004. This is a medical broadscope Type A license for medical diagnosis, therapy, and research in humans in accordance with any applicable Food and Drug Administration (FDA) requirements. Research and development as defined in 10 CFR 30.4, including animal studies; instrument calibration; and student instruction.

We request to amend NRC License 08-01738-02 issued to Walter Reed Army Medical Center (WRAMC), Washington, DC to appoint Colonel Yancy Phillips, replacing Colonel John R. Pierce, Deputy Commander for Clinical Services (DCCS), as the Chairman of the Radiation Control Committee (RCC). As the DCCS, Colonel Phillips is in a senior level executive management position, one level below the Hospital Commander, WRAMC. The Radiation Protection Officer, Colonel William B. Johnson has carefully reviewed the curriculum vitae (enclosure) and has recommended Colonel Phillips approval as Chairman of the RCC.

For additional information, please contact the undersigned at (202) 356-0058.

Sincerely,

William B. Johnson Colonel, U.S. Army Radiation Protection Officer

Enclosure

1980-83 Pulmonary Medicine Fellowship, Walter Reed Army Medical Center Washington, D.C.

# ACADEMIC APPOINTMENTS:

| 1983-90 | Assistant Professor of Medicine, Uniformed Services University of the Health Sciences (USUHS), Bethesda, MD |
|---------|-------------------------------------------------------------------------------------------------------------|
| 1989-93 | Program Director, Pulmonary Disease Fellowship, WRAMC                                                       |
| 1990-   | Associate Professor of Medicine, USUHS                                                                      |
| 1993-   | Director, Internal Medicine Residency, WRAMC                                                                |
| 1993-   | Associate Chairman, Department of Medicine, USUHS                                                           |

CLINICAL AND PROFESSIONAL POSITIONS:

| 1971-72    | Chemical Engineer, Exxon Corporation, Linden, NJ                                                                    |
|------------|---------------------------------------------------------------------------------------------------------------------|
| 1979-80    | Internist and Chief, CCU, Dewitt Army Hospital, Ft Belvoir, VA                                                      |
| 1980-82    | Program Manager, Blast Overpressure Project, Non-Auditory, Walter Reed Army Institute of Research, Washington, D.C. |
| 1983-87    | Chief, Department of Respiratory Research, Walter Reed Army Institute of Research                                   |
| 1987-89    | Director, Medical Intensive Care Unit, Walter Reed Army Medical Center<br>(WRAMC)                                   |
| 1989-90    | Chief, Pulmonary Disease Service, WRAMC                                                                             |
| 1990-93    | Chief, Pulmonary & Critical Care Medicine Service, WRAMC                                                            |
| 1993- Chie | f Department of Medicine, WRAMC                                                                                     |

# SELECTED COMMITTEE POSITIONS AND CONSULTANCIES

- 1981-87 US Delegate, NATO Panel VIII, Research Study Group 6
- 1990-93 Pulmonary Consultant to the Surgeon General of the Army
- 1990-93 Respiratory Therapy Consultant to the Surgeon General of the Army
- 1992-95 Chairman, Mobilization and Readiness Committee, WRAMC

1993- Chairman, CQI Performance Improvement Council, WRAMC

1994- Chairman, Army Region American College of Physicians Annual Meeting

1994- NIH, National Heart, Lung and Blood Institute (NHLBI) Advisory Council

1994-96 NHLBI, Lung Division, Workshop on Planning a National Strategy for Chronic Obstructive Pulmonary Disease

1994- NHLBI, Lung Division, Data and Safety Monitoring Board for Lung Health Study 2

1997- DOD(HA) Working Group on Computerized Patient Record

- 1997 NHLBI and FDA sponsored Workshop on Pulmonary Artery Catheterization and Clinical Outcomes
- 1997- Pre-reviewer for Pulmonary and Critical Care Medicine fellowships for Accreditation Council for Graduate Medical Education (ACGME)

# HONORS AND AWARDS:

Omicron Delta Kappa Honor Society, Univ of Del, 1970 Alpha Omega Alpha, Univ of Alabama, 1975 Dean's Honor Award, UAH, 1976 Resident's Award for Outstanding Research, TAMC, 1979 Fellow, American College of Chest Physicians, 1987 Fellow, American College of Physicians, 1993 Chennault Award for Outstanding Teacher, WRAMC, 1993

#### BOARD CERTIFICATIONS:

Diplomate, National Board of Medical Examiners, 1977 Diplomate #72508, American Board of Internal Medicine, 1979 Diplomate in Pulmonary Disease, ABIM, 1984 Diplomate in Critical Care Medicine, ABIM, 1991 Diplomate of American Board Of Medical Management, 1996

# MEDICAL LICENSE:

Virginia 1979 to present, #11-030980 Louisiana 1985, #06724R DEA Number AP9479191

# **PROFESSIONAL SOCIETIES:**

American College of Chest Physicians, Fellow, 1987-present Governor for US Army, 1992-95

American College of Physicians, Fellow, 1990-present

American College of Physician Executives, Member, 1993- present American Thoracic Society, 1987-present

Chairman, Long Range Planning Committee of Clinical Problems Assembly, 1991-95

Member, Health Care Policy and Clinical Practice Committee, 1993-95 Member, Clinical Practice Committee, 1995-97

Writing Committee, Statement on "Evaluation and Care of the Patient with COPD", 1993-95

Association of Military Surgeons of US, 1981-present

Association of Program Directors of Internal Medicine, 1993-

Curriculum Review Ad Hoc Committee, 1996

Association of Pulmonary and Critical Care Medicine Program Directors, 1990-1993

District of Columbia Thoracic Society, 1987-1994

Executive Committee, 1989-1993

Co-Chairman American Lung Association of DC Research Committee 1992 & 1993

### EDITORIAL REVIEWER:

New England Journal of Medicine

American Journal of Respiratory and Critical Care Medicine

Chest

Pediatric Pulmonology

Journal of Respiratory Diseases

American Medical Association panel member for Diagnostic and Therapeutic

Technology Assessment

ABIM Pulmonary Disease Re-Certification, question preparation

# **MILITARY AWARDS:**

Department of the Army Research and Development Achievement Award for 1988 Meritorious Service Medal with 4 Oak Leaf Clusters Army Commendation Medal with 1 Oak Leaf Cluster Army Achievement Medal with 1 Oak Leaf Cluster Army Superior Unit Award (2) "A" Proficiency Designator for AOC 60F (Pulmonary Disease) Order of Military Medical Merit

SUBJECT: Misadministration Report, Third Quarter 1981

US Nuclear Regulatory Commission Region I Office of Inspection and Enforcement 631 Park Avenue King of Prussia, PA 19406

1. Pursuant to Title 10, Chapter 1, Code of Federal Regulations, Part 35, Section 35.43, the following information is provided to comply with the Nuclear Regulatory Commission's regulation on the reporting of diagnostic misadministration of a radiopharmaceutical.

2. On 29 July 1981 at 1000 hours, a patient was scheduled for a MUGA scan (gated heart study). At approximately 1000 hours, the patient was premedicated as per standard procedure with 15.2 mg of Stannous Pyrophosphate in 2 ml Sodium Chloride 0.9%. At 1035 hours,/ SSN/ \_\_\_\_\_\_, injected in \_\_\_\_\_\_\_ error 20 mCi of Technetium Methylene Diphosphonate (Tc99m MDP), a bone scanning agent intended for another patient, intravenously into the patient instead of the prescribed dose of 25 mCi of Sodium Pertechnetate NaTc99m04.

3. The dose intended for the patient was properly numbered and labeled as per standard procedures. The dose of bone scanning agent (TcMDP) was properly numbered and labeled for the proper patient.

4. The misadministration was the result of failure on the Nuclear Medicine technologist, \_\_\_\_\_\_\_\_ to follow procedures to identify the proper dose for the proper patient.

5. The patient was informed by Dr. Douglas Eggli, MAJ, MC, Nuclear Medicine fellow, of the dose misadministration and was rescheduled for a repeat MUGA scan. The implications of the misadministration, including a renal and bladder dose of 0.1 to 0.5 RADs was explained to the patient. The patient was informed that there were no ill-effects to be expected and that there was no known tumor induction risk associated with a dose in this diagnostic range.

6. The patient's referring physician, Dr. John W. Shuck, CPT, MC, was notified in writing and a record of the misadministration was placed in the patient's chart by Dr. Douglas Eggli, MAJ, MC, Nuclear Medicine Service, WRAMC.

> Information in this record was deleted in accordance with the Freedom of Information Act, exemptions.\_\_\_\_\_\_\_ FOIA-\_\_\_\_\_\_

Docket No 30-0131

02-01738-02

## 90CT 1981

HSWP-QHP

#### SUBJECT: Misadministration Report, Third Quarter 1981

7. Following this incident, a thorough review of the Nuclear Medicine Service's handling of radiopharmaceutical doses was done by the senior nuclear pharmacist, LTC Richard E. Stotler, MSC. All doses were properly numbered, color coded, and labeled with the patient's name, SSN, study to be done and the radiopharmaceutical and exact dose on the syringe. No administrative or labeling errors were present in this case or found in a review of other doses prepared for use in this clinic.

8. The error was entirely a failure to recognize, check, and administer a properly labeled dose to the proper patient.

9. The technologist responsible was counselled on the proper procedures to follow in administering doses and a special class was presented to the entire technologist staff on the proper procedures and their responsibility in insuring the dose intended for a patient is for that patient, the proper radiopharmaceutical and in the correct dosage range for the study to be done.

2

SUBJECT: Misadministration Report, Third Quarter 1983

US Nuclear Regulatory Commission Region I Office of Inspection and Enforcement 631 Park Avenue King of Prussia, PA 19406

1. Pursuant to Title 10, Chapter 1, Code of Federal Regulations, Part 35, Section 35.43, the following information is provided to comply with the Nuclear Regulatory Commission's regulation on the reporting of diagnostic misadministration of a radiopharmaceutical.

2. On 15 Sep 83 at 1038 hours, Patient "X" received an injection of Tc99m heat damaged red blood cells intended for another patient. Both patients were scheduled for heat damaged red blood cell spleen scintigraphy.

3. The radiopharmaceutical was prepared following standard pharmacy procedures. The radiopharmaceutical was correctly identified and all supporting documentation accompanied the radiopharmaceutical to the dose lab, per standard procedure.

4. The dose misadministration occurred as a result of the failure of the technologist (SP5 SSN who dosed the patient, to follow standard procedure for verification of the correct radiopharmaceutical/patient combination prior to dose administration.

5 Once the misadministration was identified, the patient was immediately informed by Dr. Douglas Eggli, MAJ, MC, Nuclear Medicine staff physician, of the misadministration and was monitored for signs and symptoms of a transfusion reaction. The patient experienced no immediate adverse effect. A formal transfusion reaction workup was initiated through the blood bank. The patient was also observed in the clinic for two hours after the misadministration with no adverse reaction noted during this time. An initial note describing the misadministration was placed in the patient's medical record and her attending surgeon at DeWitt Army Hospital (Dr. Goldman) was notified by telephone. The patient was returned to DeWitt Army Hospital where she was an inpatient and was observed there for an additional 24 hours.

6. Patient "X" was informed of the possible immediate and long range health consequences of the dose misadministration, in this case primarily related to a possible transfusion reaction, Rh sensitization, and the risk of transmission of disease via unscreened blood products, principally hepatitis.

Information in this record was deleted in accordance with the Freedom of Information Act, exemptions

MM12

HSHL-HP

#### SUBJECT: Misadministration Report, Third Quarter 1983

7. The patient whose tagged red cells were administered to Patient "X" was also informed of the misadministration. The patient agreed to allow her blood to be drawn and submitted to the blood bank as part of the transfusion reaction evaluation.

8. The transfusion reaction evaluation revealed that both patients were O-negative blood type. There was no evidence of a hemolytic reaction. Direct Coombs test, plasma hemolysis, and urine hemoglobin were all negative. The "donor" serum is HG Ag negative, however, there was a mildly elevated serum SGPT. The Infectious Disease Service recommended that the patient receive prophylaxis with immune globulin based on the elevated SGPT. This recommendation was referred on to Patient "X's" primary care physician (the surgery ward resident, Dr. Feiner) at DeWitt Army Hospital by telephone as soon as the result became available (approximately 1600 hours on 16 Sep 83).

9. A formal written report of the misadministration along with the original copy of the blood bank's transfusion reaction evaluation have been forwarded to Dr. Goldman at DeWitt Army Hospital.

10. The technologist who misadministered the dose was counselled individually as to the the serious nature of the misadministration and potential health risks to the patient.

11. The need for strict adherence to standard patient identification and dosing policy were reviewed with the entire technical staff. The potential adverse health consequences for patients of such dose misadministrations were reviewed in detail.

12. Although adherence to standard procedure for patient and radiopharmaceutical identification would have prevented this misadministration, the procedure for administration of in vitro labeled homologous blood components is being changed to require that two people verify the correct patient/dose combination prior to dose administration.

point where the boxes could be declared of no radiological interest and disposed of as non-radioactive waste.

MATION PRU

SSAN:

(2) It is estimated that several tens of milliCuries of isotopes typically used by Nuclear Medicine Clinics (e.g.,  $^{99}$ Tc and  $^{131}$ I) may have been present in the waste holding area during Nov 90. This amount of activity could have resulted in an exposure of the magnitude recorded by ( )TLD (over a three to four week period).

e. \_\_\_\_\_ further stated that during the period that his dosimeter was on the shelf, he was wearing someone else's dosimeter, but he wouldn't say whose dosimeter he was wearing.

(1) The only non-routine activity in which was involved during Nov 90 was the survey of several fluoroscopy systems.

performance of the surveys and neither / nor( received any recordable exposures during Nov 90.

4. We have concluded that it is likely that / deliberately placed his dosimeter in proximity to the Nuclear Medicine needle boxes being held for decay in WRAMC's radioactive waste processing center and that he did not receive the exposure recorded by his Nov 90 dosimeter.

5. The NRC Region I Office was notified of the exposure recorded by ) dosimeter (reference 1a). When advised that our investigation concluded that \_\_\_\_\_/did not receive this exposure, they said not to continue with 10CFR20 notification procedures. During reference 1b, a request was made to provide NRC Region I a copy of our final investigation.

FOR Commander, Walter Reed Army Medical Center, ATTN: HSHL-H-HP, Washington, DC 20307-5001

SUBJECT: Dosimeter Exposure:(

1. The enclosed message indicates that the whole body dosimeter of a member of your command has been exposed to 06.700 rem of shallow dose equivalent and 06.400 rem of deep dose equivalent x-radiation.

2. Investigative procedures to be followed are in AR 40-14.

3. Your report of investigation along with a recommendation for dose to be assigned should arrive in this office by 1 March 1991. Because this is a Type III exposure, to be removed from all duties involving potential exposure to ionizing radiation, and he may not be returned to such duties without the written concurrence of this office (AR 40-14, paragraph 13).

4. Copies of the last 6 - 12 months of radiation exposure history should accompany your report.

The training and experience of authorized users will be evaluated using the criteria in 10 CFR 35, Subpart J. The Radiation Control Committee may grant case-by-case exceptions.

Ex2

Î

7.3 Radiation Safety Officer: Lieutenant Colonel Arthur G. Samiljan, Chief, Health Physics Office, Walter Reed Army Medical Center. Training and experience included at ATT 7.3.

ITEM #8 We will establish and implement the model training program that was published in Appendix A to Regulatory Guide 10.8, Revision 2, and have appended a table ATT 8.1 that identifies the groups of workers who will receive training and the method and frequency of training.

#### ITEM #9

9.1 Enclosed at ATT 9.1 are drawings of the nuclear medicine area, a detailed drawing of the nuclear pharmacy and the source storage area in radiation therapy. The research laboratories at Walter Reed are basic biomedical research facilities with impervious floors, walls and counter tops and whatever equipment is needed for the specific research and isotopes involved. All isotope laboratories are evaluated by the Health Physics Office and approved by the Radiation Control Committee.

9.2 We will establish and implement the model procedure for calibrating survey instruments that was published in Appendix B to Regulatory Guide 10.8, Revision 2.

9.3 We will establish and implement the model procedure for calibrating our dose calibrator that was published in Appendix C to Regulatory Guide 10.8, Revision 2.

9.4 We will establish and implement the model personnel external exposure monitoring program published in Appendix D to Regulatory Guide 10.8, Revision 2, with the exception that some of our personnel who have been shown to receive much less than the ALARA limit have their monitors changed on a quarterly basis.

ITEM #10

10.1 The Charter for the Radiation Control Committee and the delegation of authority for the Radiation Protection Officer are addressed in an ARMY Technical Bulletin (TB MED 525). The duties of each are included at ATT 10.1.1. Walter Reed AMC also has a regulation which lists all standing committees at WRAMC including the Radiation Control Committee. The Composition of the RCC will include:

Deputy Commander (Chairman) Chief, Department of Medicine Chief, Department of Nursing Chief, Department of Pathology and Area Lab Services Chief, Department of Radiology

Chief, Radiation Therapy Service Chief, Nuclear Medicine Service Health Physics Officer (RPO) Senior Nuclear Pharmacist Assistant Health Physics Officer (alternate RPO) (Recorder) Director, WRAIR Radiation Safety Officer, WRAIR Radiation Protection Officer, AFIP

We will also include any others required by 10 CFR 35. The orders delegating authority to Lieutenant Colonel Samiljan are included at ATT 10.1.2.

10.2 We will establish and implement the model ALARA program published in Appendix G to Regulatory Guide 10.8, Revision 2.

10.3 We will establish and implement the model procedure for leak-testing sealed sources that was published in Appendix H to Regulatory Guide 10.8, Revision 2.

10.4 We will establish and implement the model safety rules published in Appendix I to Regulatory Guide 10.8, Revision 2.

10.5 We will establish and implement the model spill procedures published in Appendix J to Regulatory Guide 10.8, Revision 2.

10.6 We will establish and implement the model guidance for ordering and receiving radioactive material that was published in Appendix K to Regulatory Guide 10.8, Revision 2.

10.7 We will establish and implement the model procedure for opening packages that was published in Appendix L to Regulatory Guide 10.8, Revision 2.

10.8 We will establish and implement the model procedure for a unit dosage record system that was published in Appendix M.1 to Regulatory Guide 10.8, Revision 2.

10.9 We will establish and implement the model procedure for a multidose vial record system that was published in Appendix M.2 to Regulatory Guide 10.8, Revision 2.

10.10 We will establish and implement the model procedure for measuring and recording molybdenum concentration that was published in Appendix M.3 to Regulatory Guide 10.8, Revision 2.

10.11 We will establish and implement the model procedure for keeping an inventory of implant sources that was published in Appendix M.4 to Regulatory Guide 10.8, Revision 2.

10.12 We will establish and implement the model procedure for area surveys that was published in Appendix N to Regulatory Guide 10.8, Revision 2.

10.13.1 We will collect spent noble gas in a shielded trap and monitor the trap effluent with an air contamination monitor that we will check regularly according to the manufacturer's instructions.

10.13.2 We will collect spent aerosol in a shielded, single-use trap.

10.13.3 We will follow the model procedure for calculating airborne effluent concentration that was published in Appendix 0.2 to Regulatory Guide 10.8, Revision 2.

10.13.4 We will calculate spilled gas clearance times according to the procedure that was published in Appendix 0.4 to Regulatory Guide 10.8, Revision 2.

10.14 We will establish and implement the model procedure for radiation safety during radiopharmaceutical therapy that was published in Appendix P to Regulatory Guide 10.8, Revision 2, except for the provision at ATT 10.14.

10.15 We will establish and implement the model procedure for radiation safety during implant therapy that was published in Appendix Q to Regulatory Guide 10.8, Revision 2.

10.16 General Safety Proceedures See ATT 10.16

**ITEM #11** 

11.1 We will establish and implement the general guidance and model procedures for waste disposal that were published in Appendix R to Regulatory Guide 10.8, Revision 2, except for the provision to hold for decay-in-storage material with a physical half-life of less than 90 days, as previously approved by the NRC (see ATT 11.1.1, ATT 11.1.2, and ATT 11.1.3). We also generate a large volume of RIA waste at the Drug Testing Lab at Ft. Meade (25 drums per month and increasing) which we would like to be able to hold for decay for only 5 half-lifes and dispose of, if all other conditions are meet. This waste is mostly empty, washed test tubes which are only minimally contaminated prior to the decay in storage process. This waste is generated at a location were RIA kits are the only radioactive material use and the waste is kept segregated from all other laboratory waste in separate sealed 55 gal. drums.

11.2 See Item 11.1.

### CURRICULUM VITAE

#### for

#### ARTHUR G. SAMILJAN, Lieutenant Colonel

DATE AND PLACE OF BIRTH:

ćx 6

YEARS OF ACTIVE MILITARY SERVICE: 20 years

PRESENT ASSIGNMENT: (21 Jun 91 to present) Chief, Health Physics Office; RPO Walter Reed Army Medical Center, Washington, DC 20307-5001

MILITARY EDUCATION (pertinent to radiation protection):

- 1. Medical Effects of Nuclear Weapons Course, 8-12 Sep 86 Armed Forces Radiobiology Research Institute Bethesda, Maryland
- 2. Army Medical Department Physics and Military Medicine Course, 26-30 Oct 87 U.S. Army Environmental Hygiene Agency Aberdeen Proving Ground, Maryland

(included presentations on management of radiation protection programs and topical radiation protection issues)

- 3. Radiological Hazards Associated with Depleted Uranium Munitions Course, 16-20 Nov 87 U.S. Army, Belvoir Research, Development & Engineering Center, Fort Belvoir, Virginia
- 4. Laser Microwave Hazards Workshop, 25-29 Apr 88 U.S. Army Environmental Hygiene Agency Aberdeen Proving Ground, Maryland
- 5. The Army Medical Department Radiation Health Sciences Course, 24-28 Oct 88 U.S. Army Environmental Hygiene Agency Aberdeen Proving Ground, Maryland

(included presentations on management of radiation protection programs and topical radiation protection issues)

 Senior Officer Nuclear Accident Course, 24-27 Apr 89 InterService Nuclear Weapons School Kirtland Air Force Base, New Mexico

#### MILITARY EDUCATION (continued):

۰.

- 7. Management of Radiation Accidents and Emergency Preparedness Training Course, 5-9 Jun 89 U.S. Army, Belvoir Research, Development & Engineering Center, Fort Belvoir, Virginia
- Nuclear Weapons Incident Seminar, 7-8 Mar 91 Naval Base Norfolk, Virginia
- 9. Medical X-Ray Survey Techniques Course, 15-26 Apr 91 Academy of Health Sciences Fort Sam Houston, Texas

**<u>CIVILIAN EDUCATION</u>** (relative to radiation protection):

Graduate Study leading to Master of Science Degree in Environmental Engineering (emphasis in Health Physics) Aug 84 - Dec 85 University of Florida Gainesville, Florida

#### HEALTH PHYSICS EXPERIENCE:

 Nuclear, Biological, and Chemical Officer Mar 76 - Jun 77 44th Medical Brigade Fort Bragg, North Carolina

(included designing and supervising the training of 100 personnel in battle field radiation detection, survey techniques, monitoring, decontamination, and protection)

 Nuclear, Biological, and Chemical Officer Jun 77 - Dec 78
 5th General Hospital Bad Cannstatt, Germany

(included designing and supervising the training of 350 personnel in battle field radiation detection, survey techniques, monitoring, decontamination, and protection)

3. Manager, Department of the Army, Nuclear Test Personnel Review Jan 86 - Dec 87 Environmental Support Group Washington, DC

(included the identification, dose assessments, and notification of all Army personnel who participated in the atmospheric nuclear testing program from 1944 to 1963. 4. Medical Health Physics Consultant Dec 87 - Jun 89 Headquarters, Army Materiel Command Office of the Command Surgeon Alexandria, Virginia

(included being the Commanding General's action officer for health aspects of ionizing and nonionizing radiation as applied to the command's workforce, and technical advisor on health hazard assessment of new materiel and to related materiel management processes)

5. Contract Manager, Johnston Island Plutonium Clean-up Project Jun 89 - Aug 90 Field Command Defense Nuclear Agency Johnston Atoll

(included planning, directing, and supervising the clean-up project, conducting radiological site surveys, and establishing procedures for packaging, storing, and disposal of radioactive waste)

6. Chief, Operations Branch/Assistant RPO Aug 90 - Jun 91 Health Physics Office Walter Reed Army Medical Center Washington, DC

(included reviewing x-ray compliance surveys and radioisotope laboratory room surveys, monitoring radiation therapy procedures, performing x-ray shielding evaluations and dose assessments, and assisting the RPO in the preparation and execution of all radiation protection policies in support of the medical center's NRC license, and ionizing and nonionizing radiation producing devices)

7. Chief, Health Physics Office/Radiation Protection Officer Jun 91 - Present Health Physics Office Walter Reed Army Medical Center Washington, DC

(Manage 20 health physicists and health physics technicians providing radiation safety support to Walter Reed Army Medical Center, Walter Reed Army Institute of Research, Armed Forces Institute of Pathology, and other federal agencies in the Washington, DC regional area. Executive agent for two NRC Licenses.)

•

## ATT 9.6

In addition to the Facilities described in Item 9.1 the following equipment and control systems are available as required for the safe handling of radioactive material:

o Remote handling equipment including jaws, vices, forceps, and remote handling tongs of varying lengths.

o Storage containers including steel safes, lead lined boxes, steel drums, lead pigs, and lead storage containers both fixed and movable.

o Shielding including movable lead shields for shielding patients, L shields both lead and plastic, and shielding materials (e.g. lead bricks, lead shot, lead wool, plastic sheet etc.).

o Radiation measuring and counting equipment including liquid scintillation counting systems, gamma well counting systems, alpha gas flow counting systems, portable surveys instruments including GM, Ion chamber, and Scintillation detectors.

o Ventilation Control systems including Fume hoods with HEPA particulate filters, and iodination filter boxes with charcoal filters and charcoal sampling systems for use with volatile isotopes.

#### ATTACHMENT 9.6

#### ATT 10.1.1

f. The Radiation Control Committee will--

(1) Meet at least quarterly and at the call of the chairman.

(2) Recommend approval or disapproval of each type of radiation source from the standpoint of radiological health and safety of patients and working personnel and other factors established for the medical use of these sources.

(3) Recommend individual users for each type of procedure with each individual radionuclide and ensure that any physician authorized to use radioactive material in humans meets the criteria specified in part 35, title 10, Code of Federal Regulations (10 CFR 35). Recommendations will be consistent with the limits and conditions of the NRC license and DARA.

(4) Recommend individual pharmacists and individual compounding protocols for compounding radioactive drugs (radiopharmaceuticals) or radiopharmaceutical kits to be administered to patients (if the procedure is permitted to be performed by NRC license or DARA).

(5) Prescribe, if required, special conditions to be permitted in the work area and special procedures or work rules for use of radiation sources.

(6) Formulate and review the radiation protection training program.

(7) Monitor radiation exposures within the command and recommend actions to keep exposures as low as is reasonably achievable (ALARA). As a minimum, the collective dose to all radiation workers, average dose, and highest individual dose will be reviewed at quarterly meetings.

(8) Formally review, at least annually, the policies and procedures established to maintain low exposures.

(9) Approve the training and experience of the nuclear pharmacist.

g. The RPO, in addition to the responsibilities in 10 CFR 35, 21, will--

(1) Exercise staff supervision over the Radiation Protection Program.

(2) Provide consultation and advice on the degree of hazards associated with radiation and effectiveness of control measures.

(3) Advise and assist the commander and radiation workers in all matters pertaining to radiation protection, including instructing and training of workers (users) and others in the safe use of protective equipment and radiation producing devices.

(4) Ensure all radioactive materials are properly receipted, used, stored, handled, shipped, and disposed of according to applicable directives.

(5) Formulate and implement the Radiation Protection Program.

(6) Formulate, implement, and supervise an active, aggressive, documented program designed to keep radiation doses to levels which are ALARA. (7) Review the current and proposed uses of radiation sources for compliance with regulations and approved procedures.

(8) Review standing operating procedures for operations involving sources of ionizing radiation before submission to the Radiation Control Committee.

(9) Review procurement of all radioactive materials to ensure compliance with NRC licenses or DARA conditions.

(10) Ensure radiation survey and/or detection instruments used in radiation protection are properly calibrated and are available to radiation workers.

(11) Ensure all radiation shields, containers, and handling equipment are maintained in satisfactory condition.

(12) Ensure the required radiation warning signs are posted.

(13) Ensure that a physical inventory of radioactive materials is conducted every 3 months.

(14) Ensure that radiation surveys are performed at least quarterly and that leak tests are performed semiannually (NRC Reg Guide No. 8.23).

(15) Evaluate hazard potential and adequacy of protective measures for existing and proposed operations.

(16) Monitor situations where higher than normal levels of radiation or radioactive contaminants are suspected.

(17) Investigate radiation accidents and incidents and overexposures to determine the cause and take steps to prevent recurrence.

(18) Terminate a program or procedure involving the use of radioactive material or radiation producing devices which are determined to be a medical threat to health and property.

(19) Keep all licenses and DARAs up to date and initiate amendments and requests for renewals when appropriate.

(20) Maintain a current registry of ionizing radiation producing devices, such as x-ray machines, per TB MED 521.

#### ATTACHMENT 10.1.1

10.13.1 We will collect spent noble gas in a shielded trap and monitor the trap effluent with an air contamination monitor that we will check regularly according to the manufacturer's instructions.

10.13.2 We will collect spent aerosol in a shielded, single-use trap.

10.13.3 We will follow the model procedure for calculating airborne effluent concentration that was published in Appendix 0.2 to Regulatory Guide 10.8, Revision 2.

10.13.4 We will calculate spilled gas clearance times according to the procedure that was published in Appendix 0.4 to Regulatory Guide 10.8, Revision 2.

10.14 We will establish and implement the model procedure for radiation safety during radiopharmaceutical therapy that was published in Appendix P to Regulatory Guide 10.8, Revision 2, except for the provision at ATT 10.14.

10.15 We will establish and implement the model procedure for radiation safety during implant therapy that was published in Appendix Q to Regulatory Guide 10.8, Revision 2.

10.16 General Safety Proceedures See ATT 10.16

١

ITEM #11

11.1 We will establish and implement the general guidance and model procedures for waste disposal that were published in Appendix R to Regulatory Guide 10.8, Revision 2, except for the provision to hold for decay-in-storage material with a physical half-life of less than 90 days, as previously approved by the NRC (see ATT 11.1.1, ATT 11.1.2, and ATT 11.1.3). We also generate a large volume of RIA waste at the Drug Testing Lab at Ft. Meade (25 drums per month and increasing) which we would like to be able to hold for decay for only 5 half-lifes and dispose of, if all other conditions are meet. This waste is mostly empty, washed test tubes which are only minimally contaminated prior to the decay in storage process. This waste is generated at a location were RIA kits are the only radioactive material use and the waste is kept segregated from all other laboratory waste in separate sealed 55 gal. drums.

11.2 See Item 11.1.

Department of the Army

ii. The action levels are determined to be ALARA based upon consideration of worker, environmental, and public exposures.

-2-

Submit a description of the procedures to be followed to determine these criteria are met.

We will continue our review upon receipt of this information. Please reply in <u>duplicate</u> to my attention at the Region I office and refer to Mail Control No. 116472. The reviewer for this licensing action is Pamela Henderson. If you have any technical questions regarding this deficiency letter please call the reviewer at (215) 337-6952.

If we do not receive a reply from you within 30 calendar days from the date of this letter, we shall assume that you do not wish to pursue your application.

Sincerely,

uma

Jenny M. Johansen, Chief Medical Licensing Section Division of Radiation Safety and Safeguards

DEPARTMENT OF THE ARMY WALTER REED ARMY MEDICAL CENTER WASHINGTON, DC 20307-5001 C----

REPLY TO ATTENTION OF:

24 November 1992

Health Physics Office

United States Nuclear Regulatory Commission Attention: Chief, Medical Licensing Section Division of Radiation Safety and Safeguards 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Dear Ms. Jenny M. Johansen:

We provide the following information in reference to Mail Control No. 116472 and in response to your memo, dated 16 November 1992, requesting additional information concerning our dedicated iodine-131 therapy room.

As a matter of standing operating procedure, the dedicated therapy room, Room 7437, remains <u>closed</u> and <u>locked</u> when there are no iodine therapies. Only the Health Physics Office possesses a key to that room.

Decontamination limits for this room will be the restricted area action limits established in NRC Regulatory Guide 8.23, "Radiation Safety in Medical Institutions". Health Physics Office personnel will decontaminate the room below this level of removable contamination prior to admittance of an iodine-131 radiation therapy patient into Room 7437.

We hope that this information will satisfy your questions and permit you to grant our exemption to 10 CFR 35.315(a)(7). We appreciate your prompt attention to this matter.

Your point of contact for this matter is the undersigned at (301)-427-5104/5107.

Sincerely,

ARTHUE G. SAVILJAN Lieutenant Colonel, US Army Health Physics Officer

### ATT 10.16

Following are general rules for the safe use of radioactive materials:

1. Wear laboratory coats or other protective clothing at all times in areas where radioactive materials are used.

2. Wear disposable gloves at all times while handling radioactive materials.

3. Monitor hands and clothing for contamination after each procedure or before leaving area.

4. Do not eat, drink smoke, or apply cosmetics in any area where radioactive material is stored or used.

5. Wear assigned personnel monitoring device(s) at all times while in areas where radioactive materials are used or stored. Whole body monitoring device(s) should be worn at chest or waist level.

6. Dispose of radioactive waste only in specifically designated receptacles.

7. Never pipette by mouth.

8. Confine radioactive solutions in covered containers plainly identified and labeled with name of compound, radionuclide, date activity, and radiation level, if applicable

9. Always transport radioactive materials in appropriate shielding and containers.

MEMORANDUM THRU

Commander, US Army Health Services Command, ATTN: HSCL-P, Fort Sam Houston, TX 78234-6000

HQDA (SGPS-PSP-E), 5109 Leesburg Pike, Falls Church, VA 22041-3258

FOR US Nuclear Regulatory Commission, Region I, Nuclear Material Safety Section A, 475 Allendale Road, King of Prussia, PA 19406

SUBJECT: Amendment of US Nuclear Regulatory Commission License No. 08-01738-02

1. Request that NRC License No. 08-01738-02 for Walter Reed Army Medical Center be amended to reflect a change in the Radiation Safety Officer from 1Lt. Allen W. Anthony to LTC Peter H. Myers. LTC Myers has been assigned as the Chief, Health Physics Office at Walter Reed AMC since August 1989. A Training and Experience Form and a Curriculum Vitae for LTC Myers are enclosed (Enclosures 1 and 2).

2. Request that Walter Reed's license also be amended to allow the holding for decay of radioactive waste containing isotopes with half lives up to ninety (90) days. We have been decaying waste with half lives of sixty five (65) days or less for a few years and have a good program for segregating, packaging, storing, and disposing of this material. We have the space to hold material for three (3) years instead of the current twenty two (22) months. Some protocols at Walter Reed use P-32 and S-35 in the same labs or even the same experiments, requiring that all the waste be packaged for burial because of the S-35 half life. Some animal studies use three (3) or four (4) different microspheres to measure blood flow at different time points in an experiment, Cr-51, Ru-103, and Ce-141 (all with half HSHL-H-HP SUBJECT: Amendment of US Nuclear Regulatory Commission License No. 08-01738-02

lives of less than sixty five (65) days) may be used with Sc-46 so all the waste has to be packaged for burial. This amendment would reduce our solid waste volume to the burial ground by 10-20%.

FOR THE COMMANDER:

Herene Hand the mes

I,

LTC, MS / Executive Officer

WALTER REED ARMY MEDICAL CENTER WASHINGTON, D.C. 20307-5001

HSHL-H-HP (385-11m)

15 March 1991

MEMORANDUM FOR US Nuclear Regulatory Commission, Region I, Nuclear Material Safety Section A, 475 Allendale Road, King of Prussia, PA 19406

SUBJECT: Amendment of US Nuclear Regulatory Commission License No. 08-01738-02. Additional information requested Docket No. 030-01317, Control No. 112925.

This is in reference to your request in a letter dated February 5, 1991 for additional information on our decay-in-storage program. The following information is provided in response to those questions.

1. The existing program for research waste with half-lives of 65 days or less generates 50-60 55gal. drums of compacted trash per year. The expected increase with half-lives of 90 days or less could raise the total to 60-75 drums per year. We currently hold this waste for 24 months to ensure at least 10 half-lives for the longest isotopes, which means we have between 100 and 120 drums in storage at any one time. Holding all our short halflife waste for 30 months could mean up to 185 drums in storage at any one time.

2. Enclosure 1 is a copy of one of the "Terms and Conditions" which all users of radioactive material at Walter Reed most follow. All the solid radioactive waste at Walter Reed is collected, screened, and packaged by the Health Physics Office. Bags of waste are examined by the health physics personnel when they are collected and again when they are compacted to ensure the proper segregation and defacing of any radioactive labels has occurred.

3. When the solid, short half-life, radioactive material is compacted it is in a 55 gal. steel drum (DOT 17H). The drum is sealed shut, the out side is marked with an I.D. number with an indelible marker, and the following information is recorded; the drum I.D., all isotopes in the drum and the initial activity of each, the date the drum was closed. When this drum is ready for disposal it is re-entered in a local disposal log and data base which includes; I.D. number, date closed, date disposed, survey instrument model, serial number and calibration date, background

HSHL-H-HP (385-11m) SUBJECT: Amendment of US Nuclear Regulatory Commission License No. 08-01738-02. Additional information requested Docket No. 030-01317, Control No. 112925.

readings, maximum readings of waste, and initials of person performing survey and waste disposal.

When the waste has been held for decay for at least 10 half-4 \_ lives of the longest half-life material present, the drums are moved to a low background area and surveyed with a portable survey meter with a remote GM or scintillation probe. If no readings above background are found the drums are opened and the material is surveyed again as it is removed from the drum. Currently we are using a Ludlum model 2 with a GM probe which is calibrated in mr/hr. The normal background is approximately 0.05 mr/hr which is 10% of full scale on the lowest scale. If I-125 is the major remaining contaminate a low energy gamma scintillation probe may also be used to ensure no external radiation levels above background are present. The waste when originally packaged contains at most a few millicuries of activity, after at least 10 half-lives it contains at most a few microcuries of activity and no measurable external exposure. In addition this waste will continue to decay in a land fill at the rate of at least 4 half-lives per year making the likelihood of any internal deposition remote. Any biological waste held for decay will be incinerated at the conclusion of the decay period which will preclude the ingestion of this material.

The medical waste in question will be compacted into 55 gal. 5. steel drums as outlined in question 3's response.

The waste storage facility at WRAMC is a decommissioned 6. research reactor facility. This building is constructed of concrete, concrete block and brick, it has no windows and very little flammable material involved in it's construction. This building is dry and heated and has a maximum capacity to hold two or three times the amount of waste we will be holding when this amendment is granted. This building is under the sole control of the Health Physics Office with steel doors and double locks at all entrances.

PETER H. MY LTC, MS Health Phybics Officer

1 Encl

#### HEALTH PHYSICS WALTER REED ARMY MEDICAL CENTER Washington, D.C. 20307-5001

#### CONDITION NO. 4

#### For

#### RADIOACTIVE MATERIAL AUTHORIZATIONS

#### RADIOACTIVE WASTE

1. <u>General</u>. Radioactive waste from Walter Reed Army Medical Center and tenant activities will be controlled, packaged, transported, and disposed of in accordance with AR 385-11, "Ionizing Radiation Protection;" Title 10, Code of Federal Regulations; Title 49, Code of Federal Regulations; Nuclear Regulatory Commission Licenses issued to WRAMC; applicable provisions of State Government requirements for waste disposal sites located within their jurisdiction; and the guidelines delineated herein.

#### 2. Definitions:

`**≜**. \_>∙ ...

> a. <u>Radioactive Material</u>: Any material or combination of materials that spontaneously emits gamma rays, X-rays, alpha particles, beta particles, neutrons, or other atomic particles that are capable of producing ions, directly or indirectly by their passage through matter.

b. <u>Radioactive Waste</u>: Surplus items containing radioactive material, property contaminated with radioactive material to the extent that decontamination is economically unsound, and materials that have become contaminated during possession/use of radioactive material.

c. <u>Activity</u>: The number of nuclear transitions (disintegrations) occurring in a given quantity of material per unit time (disintegrations per second); expressed in units of Curies or Becquerels.

d. <u>Specific Activity</u>: Total activity of a given radionuclide per gram of a compound, element, or radioactive nuclide.

e. <u>Curie</u>: The special unit of activity. One curie equals  $3.700 \times 10^{10}$  nuclear transitions per second. (Abbreviated Ci.). Several fractions of the curie are in common usage:

(1) <u>Microcurie</u>: One-millionth of a curie  $(3.7 \times 10^4 \text{ disintegrations})$  per sec.). Abbreviated  $\nu$ Ci.

(2) <u>Millicurie</u>: One-thousandth of a curie (3.7 X 10<sup>7</sup> disintegrations per sec.). Abbreviated mCi.

REVISION 2, effective 13 Apr 87

#### ATTACHMENT 11.1.2

CONDITION NO. 4 FOR RADIOACTIVE MATERIAL AUTHORIZATIONS (RADIOACTIVE WASTE)

- (12) Animal Carcasses/Animal Waste: Short half-life.
- (13) Animal Carcasses/Animal Waste: Long half-life.
- (14) <u>Animal Carcasses</u>:  $\leq$  0.05 Microcuries H-3 or C-14 per gram of animal tissue averaged over the entire weight of the animal.
- (15) Gas, Combustible.

• • • •

(16) Gas, Non-combustible.

b. Limiting the non-radioactive waste which is intermixed with radioactive waste to an absolute minimum.

c. Removing or obliterating all "Radioactive Material" labels on nonradioactive vendor shipping packages and on short half-life radioactive waste. Uncontaminated vendor shipping containers may be disposed of in the normal trash by the users. Short half-life waste will be delivered to Health Physics Office (HPO) collection points for subsequent storage, decay, and ultimate disposal in the normal trash when HPO personnel have determined that the waste has reached natural background radiation levels.

d. Storing used Mo-99/Tc-99m generators and other items of equipment containing radioactive material in designated areas only. The radiation labels will be removed on such items only when they reach background radiation levels.

e. Maintaining their inventory of radioactive waste to a practical minimum.

f. Controlling radioactive waste in their work areas to prevent unauthorized disposal by the custodial service. Magenta plastic bags will be used to contain radioactive waste. Magenta bags will not be used for other purposes.

g. Insuring that all radioactive waste is delivered to HPO collection point personnel for ultimate disposal.

h. Marking all radioactive waste containers with the radiation caution symbol and the words "Caution - Radioactive Waste" and/or "Caution -Radioactive Material." Plus "DO NOT EMPTY!"

i. Insuring that radioactive material is not released into the sanitary sewage system without the specific approval of the Health Physics Officer.

j. Insuring that decontamination of reusable equipment is only performed in laboratory sinks that have been authorized via their Radioactive Material Authorization. See <u>Section II</u> for specific requirements concerning this procedure.

3

#### CONDITION NO. 4 FOR RADIOACTIVE MATERIAL AUTHORIZATIONS (RADIOACTIVE WASTE)

i. Biological wastes (e.g., animal carcasses/animal waste) shall be prepared by the User in a manner that allows the waste to be readily packed in in a 30gallon drum alternating 10-inch layers of waste and packing materials. Prepared biological waste shall be placed in double magenta plastic bags and tagged as previously indicated.

> SECTION II - RELEASE OF RADIOACTIVITY INTO THE SANITARY SEWAGE SYSTEM

1. Liquid waste will be released to the sanitary sewage system in accordance with Title 10, Code of Federal Regulations, Chapter 1, Part 20.303 (i.e., 10 CFR 20).

2. Unless specifically authorized by the Health Physics Office, all releases of radioactive liquid to the sanitary sewerage system will be conducted by the Health Physics Office to assure that the quantity of radioactive material released into the system by combined WRAMC disposal procedures does not exceed the following limits:

a. The quantity of any licensed or other radioactive material released into the system by WRAMC in any one day does not exceed the larger of paragraphs a(1) or (2) below.

(1) The quantity which, if diluted by the average daily quantity of sewage released into the sewer by WRAMC will result in an average concentration equal to the limits specified in Appendix B, Table I, Column 2 of 10 CFR 20 or

(2) Ten times the quantity of such material specified in Appendix C of 10 CFR 20-and

b. The quantity of any licensed or other radioactive material released in any one month, if diluted by the average monthly quantity of water released by WRAMC, will not result in an average concentration exceeding the limits specified in Appendix B, Table I, Column 2 of 10 CFR 20 and

c. The gross quantity of licensed and other radioactive material, excluding hydrogen-3 and carbon-14, released into the sewerage system by WRAMC does not exceed one curie per year. The quantities of hydrogen-3 and carbon-14 released into the sanitary sewerage system may not exceed 5 curies per year for hydrogen-3 and 1 curie per year for carbon-14. Excreta from individuals undergoing medical diagnosis or therapy with radioactive material shall be exempt from any limitations contained in this document.

3. The following policy and procedures apply to all individuals permitted to release radioactive washings into the sanitary sewage system via laboratory sinks:

a. Such release approval must be specifically included in the Principal User's WRAMC Radioactive Material Authorization.

#### ATTACHMENT 11.1.2

#### CONDITION NO. 4 FOR RADIOACTIVE MATERIAL AUTHORIZATION (RADIOACTIVE WASTE)

#### SECTION IV - RADIOACTIVE WASTE DISPOSAL SUPPLIES

1. Items of supply for the containment and packaging of radioactive waste are stocked by the Supply and Administration Branch, Materiel Division, Directorate of Industrial Operations, WRAMC. The stockage items meet U.S. Army and Federal radioactive material packaging requirements for most of the radioactive waste resulting from laboratory and/or clinic procedures at WRAMC, WRAIR and AFIP. However, it should be noted that packaging requirements vary with the particular type, form and curie amount of the radioactive waste. Consequently, all personnel involved with the packaging of radioactive waste should consult the Health Physics Office in order to assure that the available stockage items meet packaging specification requirements for each particular radioactive waste disposal operation.

2. Following are the currently stocked items:

a. DRUM, Steel, DOT Specification 17-H, 30-gallon with gasket and sealing bolt. (Used as shipping container for the transport of radioactive biologicals).

b. DRUM, Steel, DOT Specification 17-H, 55-gallon with gasket and sealing bolt. (Used as a shipping container for the transport of low-level radioactive materials).

c. VERMICULITE, 4 cu ft bags. (Used as an absorbent material for the packaging of biological and liquid radioactive waste) - agricultural, Grade 4.

d. SLAKED LIME (Used to retard spoilage of biological radioactive waste).

e. BAG, Plastic, Magenta,  $20" \times 15" \times 60"$ , 4 mil thickness. (Used as a liner for large waste receptacle).

f. BAG, Plastic, Magenta,  $13" \times 12" \times 24"$ , 2 mil thickness. (Used as a liner for small laboratory radioactive waste receptacle).

g. DIATOMACEOUS EARTH, medium grade (floor dry #85), 2.5 cu ft bag. (Used as an absorbent material for packaging of liquid radioactive waste).

3. Additional items will be stocked or procured as required to meet the provisions of Federal/State regulatory agencies.

4. Principal Users are responsible for funding the costs of materials and supplies used to dispose of radioactive wastes. Although Principal Users will pay for the supplies they stock for use in their particular areas, the Health Physics Office, RMC Branch, will order and pick up the supplies needed to collect and package the radioactive waste received from the Principal Users. All orders placed by the Health Physics Office for radioactive waste disposal supplies for the hospital, WRAIR and AFIP will be funded by Clinical Investigation, Department of Pathology/Laboratory Services, Department of Radiology, WRAIR, or AFIP as appropriate.

Additional Information for Review of Renewal of U.S. SUBJECT: Nuclear Regulatory Commission License No. 08-01738-02, mail control No. 117725

Nuclear Materials Safety Branch Division of Radiation Safety and Safequards ATTENTION: Mr. Thomas K. Thompson U.S. Nuclear Regulatory Commission, Region I 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Information in this record was deleted in accordance with the Freedom of Information Act, exemptions 2

-11A. 2006-07

Dear Mr. Thompson:

In response to your letter of August 11, 1993, pertaining to the renewal of License No. 08-0738-02, Control No. 117725, the following additional information is provided:

a. The Radiation Control Committee (RCC) follows the criteria set down in 10 CFR 33.15 for evaluating physicians and other individuals to use radioactive material for nonhuman uses. After evaluations have been completed using the aforementioned criteria and additional information, the RCC makes a final decision to approve or disapprove an individual as an authorized user.

b. Information Notice 90-09 has been carefully reviewed. It does not state that license renewals not having an Interim Waste Storage Plan will have a condition placed on it which will only allow storage of LLW for a rolling two year period. It does state however, that "not all licensees who will need to store LLW onsite will need amendments to their licenses to do so". Our existing license has no condition limiting storage of radioactive material or waste, except by total activity. We intend to maintain our total inventory, to include storage of waste, below existing A rolling two year LLW storage condition will conflict limits. with our NRC approval for decay, in storage of materials with halflives of up to 90 days. This requires us to hold some waste for a minimum of 2.5 years with no upper limit specified. Our waste is processed and stored in a decommissioned research reactor building which is solely occupied and secured by the Health Physics Office. The waste consist of dry, solid lab material, which is compacted into 55-gallon steel drums properly labeled and ready for disposal. It is stored under dry, temperature controlled conditions on fourlevel warehouse racks, and secured in a locked building surrounded by a locked perimeter fence. This facility has capacity to safely hold 500 drums.

| OFFICIAL, | RECORD COPY  | Mi. 10 | 11       | 17725     |
|-----------|--------------|--------|----------|-----------|
| ÷         | ML050000 406 |        | MM/6 SEP | 1 7, 1993 |

c. Our request for a case by case exemption from the requirements of 10 CFR 35 Subpart J is hereby withdrawn.

d. Radiation safety office audits of the performance of radioactive material authorizations are conducted semiannually. The elements of each audit include compliance with Army and hospital regulations, terms and conditions of the NRC license, proper posting of signs and labels, activity on hand, location, inventory records, logs, procedures, and required personnel actions.

e. All protocols for the use of unbound radioactive iodine involve less than 10 mCi per experiment; however, iodination procedures are required to be performed in a designated glove box which is inside a chemical fume hood. Exhaust is pulled through a charcoal filter and HEPA filter before venting to the outside. The hood exhaust air and room air are periodically monitored to ensure compliance with federal standards. All nonhuman use labs use less than 100 mCi at any one time. Nuclear Medicine is the only location where quantities greater than 100 mCi are handled. One compactor is used at the Health Physics waste processing facility to compact dry, solid LLW in 55-gallon drums. The facility is secured by the Health Physics Office and routinely surveyed for The compactor is exhausted through a HEPA contamination. particulate filter and charcoal cartridge air samples are used to monitor the exhaust air for volatile gases.

f. The model training program that was published in Appendix A to Regulatory Guide 10.8 Revision 2 will be established for all radiation workers. Records will be maintained to demonstrate compliance with applicable regulations.

g. Animal holding facilities are maintained in clean areas. Animals are taken from the holding facility to a restricted area by authorized users for the introduction of radioactive material. Animals are then sacrificed, placed in a marked freezer, and picked up by Health Physics Office for appropriate disposal. Protocols requiring the holding of animals containing radioactive material greater than exempt quantities will include provisions to ensure that the holding facility is secured from unauthorized access. Only authorized users will handle animals, animal wastes and carcasses. Cages will be cleaned and decontaminated by authorized users to ensure proper disposal of radioactive material and that they are free of radioactive contamination.

h. Trigger levels for removable contamination will be >50% and >100% of Reg Guide 8.23, Table 2 limits. Trigger levels for radiation levels will be 2 times background or 1 mR/hr for gamma and 2 mR/hr or 25% of 10 CFR 20.101(a) limits.

i. Our request for authorization to decay in storage I-125 LLW for 5 half-lives rather than 10 half-lives is hereby withdrawn.

j. Amendment No. 63, dated June 22, 1993, added the Gillette building to our license. See enclosure.

k. It has been noted that M.1 and M.2 of Reg Guide 10.8, Revision 2 are missing some required information.

1. Minimum requirements for surveys in non-medical use areas will be determined by types and quantity of material. For gamma and high energy beta emitting material the users will survey daily with G-M survey meters. Health Physics will survey weekly when  $\geq 200$  uCi is used at any one time and monthly when <200 uCi is used. For soft beta emitting material the users will perform daily wipes at the end of each day of use when using >100 uCi at any one time. Health Physics will survey weekly when  $\geq 200$  uCi is used at any one time and monthly when <200 uCi is used.

I hope the above information adequately addresses your concerns pertaining to the renewal of our broad scope license. Please contact the undersigned at (301) 427-5161 if further information is required.

Enclosure as ARTHUR G. SAMILJAN Lieutenant Colonel, U.S. Army Chief, Health Physics Office

- B. Before disposal as normal waste, radioactive waste shall be surveyed to determine that its radioactivity cannot be distinguished from background. All radiation labels shall be removed or obliterated.
- C. Generator columns shall be segregated so that they may be monitored separately to ensure decay to background levels prior to disposal.

Except as specifically provided otherwise in this license, the licensee shall conduct its program in accordance with the statements, representations, and procedures contained in the documents, including any enclosures, listed below. The Nuclear Regulatory Commission's regulations shall govern unless the statements, representations and procedures in the licensee's application and correspondence are more restrictive than the regulations.

REPLY TO ATTENTION OF:

October 29, 1993

Health Physics Office

SUBJECT: Additional Information for Review of Renewal of U.S. Nuclear Regulatory Commission License No. 08-01738-02, mail control No. 117725

Nuclear Materials Safety Branch Division of Radiation Safety and Safeguards ATTENTION: Mr. Thomas K. Thompson U.S. Nuclear Regulatory Commission, Region I 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Information in this record was deleted in accordance with the Freedom of Information Act. exemptions

FOIA 2006-023

Dear Mr. Thompson:

In response to your letter of September 29, 1993, pertaining to the renewal of License No. 08-0738-02, Control No. 117725, the following additional information is provided:

1. The minimum requested information that is required of proposed users is detailed on the enclosed authorization application forms. (Enclosures 1-3)

2. The information indicated in Information Notice 90-09, Attachment 1 is provided at enclosure 4.

3. The minimum elements of our authorization audits are detailed in the Health Physics Office Standing Operating Procedure 1-26. (Enclosure 5) Performance of independent surveys was addressed in paragraph 1 of our September 9, 1993 letter.

4. The minimum information recorded for radiation safety training is date training was given, place, instructor, and names of attendees. The groups of workers who will receive training are listed at ATT 8.1 of original application.

5. Please change Item 10.2 of original application to read "We will establish and implement the model ALARA program in Appendix G to Regulatory Guide 10.8, Revision 2 except that paragraph 3.a.(3) is deleted".

6. Please change Item 10.5 of original application to read "We will establish and implement the model spill procedures in Appendix J to Regulatory Guide 10.8, Revision 2 except that the Alternate RSO will follow up on the cleanup of the spill and will attach an Incident Memorandum to the Contamination Survey.

ARTHUR G. SAMILJAN Lieutenant Colonel, U.S. Army Chief, Health Physics Office

#### INSTRUCTIONS FOR PREPARATION OF APPLICATION FOR AUTHORIZATION TO USE RADIOACTIVE MATERIAL (NON-HUMAN USE)

#### WRAMC FORM 1662R (FEBRUARY 1979)

#### GENERAL INFORMATION

An applicant for an "Authorization to Use Radioactive Material (Non-Human Use)" should camplete WRAMC Form 1662R in detail and submit in duplicate to the WRAMC Health Physics Office.

Application for gamma irradiators should include a copy of the proposed Standard Operating Procedures that will mainmented to assure personnal safety during routing description and safetyaacy situations. be implemented to assure personnel safety during routine of

3. All proposed locations where the applicant desires to use, store, or dispose of radioactive material should be coordinated with the Health Physics Office Reactor and Survey Branch prior to submission of the application in order to assure aspeditious processing of the application. Submission of an incomplete application will often result in a delay in issuence of an authorization because of the correspondence necessary to obtain information requested on the 3. application.

#### EXPLANATION OF WRAMC FORM 1662R (FEBRUARY 1979)

1. WRAMC Form 1662R is designed for use in supplying information on radioactive materials use programs of varying complexity. The applicant should provide complete information on his proposed program for the possession and use of radioactive material for those items that do not apply, indicate as N/A (not applicable).

2. Application for new authorizations and renewal af existing authorizations should be completed in their entirety. However, applications for amendment of existing authorizations may be completed as follows:

a. Complete Items 1, 2, 3, 11, and 12.

For those items to do not required amendment indicate as N/C (no change).
 For those items that require amendment indicate the proposed changes to the current authorization.

3. Explanation of WRAMC Form 1662R Items:

#### 1. Self explanatory.

2. The "Principal User" is the individual who bears altimate responsibility for possession, inventory and implementation of the safety procedures necessary to assure the sale use of the materials specified in the application. He is directly responsible to the WRAMC Radiation Control Committee. Attach a completed WRAMC Form 1643 if a current copy is not on file with the Health Physics Office,

3. The applicant's address should include organization, activity, building, room number, and reference or affice symbol.

4. A "Co-Worker" is an individual who possesses adequate training and experience with radioactive material to qualify him as a "Principal User". He works under the direction of and is responsible to the "Principal User for the safe and proper use of the materials specified in the application. List all Co-Workers alphabetically by last name. Each Co-Worker should be identified as follows: Last name, lirst name, middle initial and grade. Attach a completed WRAMC Form 1643 for each Co-Worker if a current copy is not an tile with the Health Physics Office.

5. A "Trainee" is an individual who works under the direct supervision of a Principal User or Co-Worker for the purpose of obtaining the necessary training and experience to qualify for either status. List all trainees alphaberic-ally by last nome. Each Trainee should be identified as follows: Last name, first nome, middle initial and grade.

6. A "Technician" is an individual who works under the direct supervision of a Principal User or Co-Worker for the purpose of performing certain routine duties associated with use of materials specified in the application. He does not prossess suitable training and experience to be classified as a Principal User or Co-Worker, and is not undergoing training that would qualify him to attain either status. List all Technicians alphabetically by last nome. Each Technician should be identified as follows: Last name, first name, middle initial and grade.

#### 7-9. Self explanatory.

100. List radioisotopes by escending mass number, i.e., the isotope with the smallest mass number is placed at the top of the column and the isotope with the greatest mass number is placed at the bottom of the column.

10b. In addition to the chemical form of the radioisotope indicate whether it is in solid or liquid or gaseous form and whether it is a sealed or unsealed source. In order for radioactive material to qualify as a "sealed source" the radioactive source must be sealed in an impervious container which has sufficient mechanical strength to prevent contact with and dispersion of the radioactive material under the conditions of use and weat for which is was designed.

10c. State the maximum millicutie amount of each chemical form of the radioisatope that must be kept in the inventory in order to satisfy mission requirements.

10b. State the intended use of each chemical form of the radioisatapes listed in Calumn Da.

11-12. Salf explanatory.

# INFORMATION NEEDED IN AN AMENDMENT REQUEST TO AUTHORIZE EXTENDED INTERIM STORAGE OF LOW-LEVEL RADIOACTIVE WASTE IN 90-09

#### 1. Identification of Waste to be Stored:

a. None

b. H-3, 1.5 Ci; C-14, 0.2 Ci; 2,900 cubic feet in (380) 55gallon drums.

c. (1) C

(2) solid

(3) volume reduction

(4) none

d. H-3, 200 mCi/yr, solid/dry; C-14, 30 mCi/yr, solid/dry; 440 cubic feet in (60) 55-gallon drums.

e. None

2. Plans for Final Disposal:

a. July 1994 for waste generated in Washington, DC and Maryland.

b. Texas for DC waste in 1996 and the Appalachian Compact for MD waste in 2000.

c. As soon as possible after site is available; 1-3 months.

3. Physical Description of Storage Area:

a. See attachment 1.

b. 500 drums, 60 drums/year.

c. Maintained decommissioned reactor facility.

d. Perimeter fence w/secured gate and secured brick and concrete building.

e. Forced air circulation system. This system has provided adequate ventilation for our LLRW storage and processing facility for the past several years. The additional drums of solid, long waste containing H-3 and C-14 will not require modification to this system.

f. The building has an alarm system, fire extinguishers, fire hydrant, and is inspected monthly by fire chief. The additional storage will not require additional safeguard systems or modifications to the existing systems.

Cricl 4

g. The building has a heating and cooling system.

h. The building was designed and built as a reactor with low vulnerability to other hazards.

4. Packaging and Container Integrity:

a. Dry, solid waste compacted in steel, 55-gallon drums. No hazards to integrity of containers; indefinite storage life.

b. Weekly radiation and contamination surveys to include wipe samples and visual inspection.

c. Not applicable

5. Radiation Protection:

a. Area is currently used for LLRW storage and processing with proper posting, surveying, and monitoring. The extended interim storage of H-3 and C-14 will not present a significant radiation hazard nor a significant increase in personnel exposure. The current radiation safety and ALARA programs as described in the license application are adequate for this additional storage of H-3 and C-14.

b. none

c. The Walter Reed Army Medical Center (WRAMC) Emergency Preparedness Plan is activated by dialing (202) 576-3317. This is a central notification number for WRAMC police, fire, and emergency response. The extent of activation will be dependent upon the particular situation. The extended interim storage of H-3 and C-14 will not present significant hazards or risks.

d. The radionuclides requiring extended interim storage are H-3 and C-14. The activity of the radionuclides contained in each waste package received is recorded in a log as a drum is packed. When the drum is filled and sealed the total quantity of each radionuclide is recorded on the drum's identification label. This information is also recorded and maintained on an electronic data file.

6. Training:

a. Health physics technicians attend weekly, one hour professional training classes which cover all aspects of the radiation safety program. Health Physics Office standing operating procedures are reviewed and discussed in detail as part of the training program.

7. Financial Assurance: See attached Statement of Intent.

8. Emergency Preparedness: Not required; however, WRAMC has an Emergency Preparedness Plan.

DEPARTMENT OF THE ARMY WALTER REED ARMY MEDICAL CENTER WASHINGTON, DC 20307-5001

REPLY TO ATTENTION OF:

Office of The Commanding General

# STATEMENT OF INTENT

1. I, Ronald R. Blanck, Commander of Walter Reed Army Medical Center, am the Official duly appointed by the Headquarters, Department of the Army, to represent my organization.

2. The Nuclear Regulatory Commission Licenses for which this Statement of Intent is being issued are:

(a) License Number 08-01738-02 (expiration date 30 Apr 93)

(b) License Number 08-01738-03 (expiration date 30 Nov 96)

3. The facilities for which this Statement of Intent is being issued are:

(a) Walter Reed Army Medical Center, Washington, District of Columbia;

(b) Walter Reed Army Medical Center, Forest Glen Section and Annex, Silver Springs, Maryland;

(c) Walter Reed Army Medical Center, Department of Pathology, Fort Meade, Maryland (U.S. Army Medical Laboratory);

(d) Walter Reed Army Institute of Research, Washington, District of Columbia;

(e) Walter Reed Army Institute of Research, Rickman Building, 13 Taft Court, Rockville, Maryland;

(f) Walter Reed Army Institute of Research, Gillette Building, 270 Research Center, 1413 Research Boulevard, Rockville, Maryland;

(g) Walter Reed Army Institute of Research Animal Holding Facility, Fort Meade, Maryland;

(h) U.S. Army Institute of Dental Research Facility, Fort Meade, Maryland;

# - 2 -

4. In accordance with the requirements of 10 CFR 30.35, and in my capacity as the Commander of Walter Reed Army Medical Center, I am providing assurance that sufficient funds for decommissioning and disposal of stored radioactive waste will be obtained when necessary for the eventual decommissioning of WRAMC's NRC Licenses and disposal of stored radioactive waste.

Ronald R. Blanck Major General, U.S. Army Commander

# HEALTH PHYSICS WALTER REED ARMY MEDICAL CENTER Washington, DC 20307-5001

HSHL-HP SOP# 1-26

# AUDIT OF RADIOACTIVE MATERIAL AUTHORIZATIONS

1. GENERAL: In accordance with AR 40-37 and 40-61, semiannual reviews of each WRAMC Radioactive Material Authorization must be performed. Site inspection of all authorized activities and work areas are reviewed in order to determine compliance with procedures, radioisotope possession limits, record keeping, and posting requirements.

2. PURPOSE: The purpose of this SOP is to:

a. Establish the review process used to audit an authorization.

b. Define the items to be audited and establish the criteria for exceptable compliance with Federal and WRAMC regulatory requirements.

c. List the documentation required.

3. REQUIRED FORMS:

a. The following forms must be used or reviewed when setting up, conducting, and/or following up on an audit of a Radioactive Material Authorization:

1. Memorandum: Health Physics Office "Audit of Radioactive Material" (Incl 1).

2. WRAMC Audit of Radioactive Material Form (Incl 2).

3. DA Form 3862: "Controlled Substances Stock Record" (Incl 3) or equivalent.

4. Authorization Program, Isotope Inventory Report Form (generated from the computer).

6. WRAMC Form 538 "Radiation Worker Briefing Card" (Incl 4).

7. Deficient Audit Form (Incl 5)

Ene 5

## HSHL-HP SOP# 1-26

October 28, 1993

#### 4. PREPARING FOR AUDIT:

(....)

a. Set up appointments with Principle Users (PU) by sending (or hand carrying) Memorandum from Health Physics Office "Audit of Radioactive Material". Audits should be scheduled in groups by location so the auditor can move from one audit to the next with a minimum of lost time. Most audits can be performed in 30 minutes, large authorizations may require more time and should be scheduled accordingly. Some rearranging will be necessary as PU's call to indicate conflicts with their schedules. The auditor should select a mutually agreeable time to reschedule when notified of a conflict.

b. Print a hard copy from the Authorization Program of the authorization you will be auditing, this will include:

- (1) Administrative data
- (2) Personnel and training dates
- (3) Rooms
- (4) Isotopes and limits authorized

c. Print Isotope Inventory Report Form from dBase Inventory data base, to list the isotope shipments received since the last audit and the isotopes still active from the previous audit. This will include the following information for each isotope shipment for the authorization requested:

- (1) HPO tag number
- (2) Chemical form
- (3) Date received
- (4) Original activity in millicuries
- (5) A blank to list new activity in millicuries
- (6) Last updated activity in millicuries
- (7) Vendor
- (8) Purchase order number
- (9) Call number
- (10) Remarks

2

# HSHL-HP SOP# 1-26

October 28, 1993

d. Two copies of the Audit Form with a carbon are prepared so a signed copy can be left with the Principle User at the time of the audit.

e. The folder containing the previous inventory records for this authorization will be pulled from the HPO file.

5. CONDUCTING AN AUDIT: The material assembled in Item 4. b, c, d and e above will be taken by the auditor to the audit. The WRAMC "Audit of Radioactive Material" form will be used as a check list of the major areas of each authorization which need to be inspected. These are:

a. DA Form 3862 (or equivalent) Inventory Records: The authorizations inventory records will be compared to the "Isotope Inventory Report" (see item 4. c.) to ensure they include all shipments delivered to them by the HPO. Each entry in the inventory records shall contain: the isotope, the HPO tag number, date received, activity received, chemical form of compound, the activity used and disposed of, and the activity remaining. The "Isotope Inventory Report" will be completed at this time to show the new "updated activity" for each shipment. This form will be signed and dated at the bottom by the person providing the inventory information and will be used to update the inventory database at the HPO. It will remain on file as a permanent inventory record.

b. Within limits: The authorizations inventory records shall indicate a running balance of activity on hand for each isotope which is authorized. The PU is responsible for ensuring that the isotope limits of each isotope are not exceeded at any time and the auditor will check the running balance against the isotope limits listed on the computer generated copy of the authorization (see item 4. b. (4)).

c. Inventory Control Officer: The individual responsible for the inventory record keeping (PU or Technician).

d. WRAMC Reg 40-10: A copy must be available to radiation workers for information on the safe handling of radioactive material.

e. WRAMC Authorization: A copy of the approved authorization and any amendments most be maintained by the PU. At this time the computer generated copy of the information on the authorization (see item 4. b.) will be shown to the PU and any discrepancies clarified. Any changes which need to be made

3

October 28, 1993

HSHL-HP SOP# 1-26

in the authorization can be noted in items 11 or 12 on this form and it will be considered as an amendment request if signed by the PU.

f. General Provisions & Terms and Conditions: A copy must be maintained on file.

g. LSC - Source No. & Location: The location of any liquid scintillation counters with sealed source numbers will be noted.

h. WRAMC 538 "Radiation Worker Briefing Card": This form, required annually for each radiation worker, shall be requested if it has been determined that present records are not current (see item 4. f.).

i. Sink Log: A logbook listing amounts of radioactive material placed into the sanitary sewage system through a wash sink must be available for each wash sink on the authorization. Entries must be made at least monthly when no washes have been performed to indicate that fact. The monthly limit for wash sinks is 100 uCi.

j. Signs and Labels: Each controlled area shall be identified with the appropriate signs such that all employees and visitors who enter shall be informed of the pertinent requirements and procedures for the protection of themselves and fellow workers against internal and external exposure. The following areas and/or documents must be posted:

- (1) Wash Sinks
- (2) LSC
- (3) Entrance/Exit
- (4) NRC Form 3 (map)

(5) Notice to Employees Letter

(6) Parts 19&21 of 10CFR

k. Personnel Changes: Additions or deletions. The Audit Form can be used as a memo to make personnel changes if it is signed by the PU (no authorized representative can make amendments to the authorization).

# HSHL-HP SOP# 1-26

October 28, 1993

1. General Comments: List pertinent information which should be communicated to the office such as: posting new equipment, renovations of labs, pregnant workers, computer changes, name changes, etc.

m. Signature & Date of Principal User or Authorized Representative: Signature of PU needed to amend the authorization.

6. DEFICIENT AUDIT FORM: Given if the authorization is being improperly maintained for any of the following reasons:

a. Not maintaining correct inventory records.

b. Not within possession limits.

c. Failure to amend authorization to reflect changes in personnel, rooms, etc.

d. Failure to adhere to proper work practices.

ARTHUR G. SAMILJAN LTC, MS Health Physics Officer

HSHL-H-HP (385-111)

### MEMORANDUM FOR

# SUBJECT: Health Physics Office Audit of Radicactive Material Inventory for Authorization Number

1. This office is required to conduct periodic audits of the radioactive materials inventory for your Authorization.

2. You are scheduled to be audited on \_\_\_\_\_\_at \_\_\_\_\_hours. It is requested that the inventory officer for your Authorization be available to present inventory records and accompany the auditor during the inventory verification inspection.

3. If the date/time of the scheduled audit is not satisfactory, please contact Mr. David W. Burton, Chief, Radioactive Materials Control Branch, Telephone: 427-5104, to make alternate arrangements.

David W. Burk

NAME (Last, First, MI)

DUTY MAILING ADDRESS AND TELEPHONE NUMBER

As Principal User I have insured that the above named individual has received a briefing on the following subjects in accordance with Title 10 Code of Federal Regulations Part 19.

- 1. Walter Reed Army Medical Center's "NOTICE TO EMPLOYEES"
- 2. Form NRC-3

 $\langle \cdot \rangle$ 

 $\bigcirc$ 

- 3. Title 10 Code of Federal Regulations Parts 19, 20 and 21.
- 4. Information concerning the storage, transfer and use of radioisotopes allowed under this authorization.
- 5. Authorization To Use Radioisotopes (WRAMC Form 1662R)
- 6. Hazards and protective measures associated with isotope usage.
- 7. Procedures for requesting a report of exposure to radiation.

NRC FORM 313M TRAINING AND EXPERIENCE CONTINUED - PAGE 3

# CURRICULUM VITAE

# LTC WILLIAM B. JOHNSON, Ph.D, Medical Service Corps, US Army

Address: Residence:

Work:

Walter Reed Army Medical Center Chief, Health Physics Office Washington D.C. 20307-5001 Phone: (301) 427-5104

# ACADEMIC AREAS OF INTEREST:

Health Physics, Medical Physics, Optimizing Medical Images, Quality Control in Radiology, Computers, Public Health

### **EDUCATION AND TRAINING:**

## CIVILIAN TRAINING:

University of North Carolina, Chapel Hill, NC, Ph.D., Radiological Hygiene,

Tulane School of Public Health and Tropical Medicine, New Orleans, LA, MPH, Environmental Health, 1976.

Iowa State University, Ames, IA, BS, Mathematics,

Medical X-Ray Protection Course, USPHS, Rockville, MD, 2 weeks, 1973.

Ionizing and Nonionizing Radiation in Medicine, University of Pennsylvania, Philadelphia, PA, 1 week, 1979.

Electronic Imaging in Medicine, University of Texas at San Antonio, TX, 1 week, 1983.

Health Physics Aspects of Nuclear Attack, Health Physics Summer School, Louisiana University, Hammond, LA, 1 week, 1984.

Health Physics In Radiation Accidents, Oak Ridge Associated Universities, Oak Ridge, TN, 1 week, 1985.

MRI Acceptance Testing and Quality Control, The Bowman Gray School of Medicine, Winston-Salem, NC, 1 week, 1988.

International Society for Optical Engineering Medical Imaging V Meeting, San Jose, CA, 1 week, 1991.

Éx 6

American College of Radiology's Mammographic Image Quality Course: Role of the Medical Physicist, January 1993, 18 CME credits awarded.

#### MILITARY TRAINING:

Nuclear Power Plant Operator Course (Health Physics Specialty), Ft. Belvoir, VA, 1 year, 1971.

AMEDD (MSC) Officer Basic Course, Ft. Sam Houston, TX, 9 weeks, 1972

AMEDD Officer Advanced Course, Ft. Sam Houston, TX, 24 weeks, 1975.

Command and General Staff Officer Course (Correspondence Option), 1 year, 1987.

Faculty Development Course, Academy of Health Sciences, Ft. Sam Houston, TX, 4 weeks, 1976.

Medical Effects of Nuclear Weapons, Armed Forces Radiobiology Research Institute, Bethesda, MD, 1 week, 1983.

Medical Physics and Military Medicine, US Army Environmental Hygiene Agency, Aberdeen Proving Ground, MD, 1 week, 1983, 1985, 1987, 1988, 1989, 1991, 1993.

### **TEACHING EXPERIENCE:**

1990-1993, Assistant Professor of Preventive Medicine and Biometrics, Uniformed Services University of the Health Sciences, Bethesda, MD.

1977-1979, Instructor, Radiological Physics, Academy of Health Sciences, Ft. Sam Houston, TX.

1977-1979, Assistant Professor of Health Sciences, Baylor University at San Antonio, San Antonio, TX.

1969-1970, High School Teacher (Mathematics), Grant Community High School, Fox Lake, IL.

### **PROFESSIONAL EXPERIENCE:**

1. June 1992 to May 1994, Chief, Health Physics Division, U.S. Army Environmental Hygiene Agency, Aberdeen Proving Ground, MD.

Duties: Leads and manages the Health Physics Division composed of the Medical Health Physics Branch, the Industrial Health Physics Branch and an Administrative Section. Directs the activities of some 25 professional health physicists in world wide mission of support of U.S. Army Radiation Protection Programs. Support includes complete radiation protection program evaluations for compliance with Federal, Army, and Nuclear Regulatory Commission (NRC) Licenses for Medical and Industrial facilities, medical and industrial x-ray surveys, radiation dose assessments from bioassay data, assistance in preparation of documents to terminate NRC licenses, and conducting verification surveys for NRC License termination. Radiation protection policies are developed for the Army Surgeon General for implementation Army wide. Act as principle user of radioactive materials, supervisor of <sup>137</sup>Cs irradiator for calibration, and member of the Radiation Control Committee.

2. June 1989 to June 1992, Deputy Director, Environmental Health and Occupational Safety; Chief, Radiation Safety and Radiation Protection Officer, Uniformed Service University of the Health Sciences (USUHS), Bethesda, MD.

Responsible for the supervision and management of Duties: broad scope US Nuclear Regulatory Byproduct Materials License No. Supervises health physics personnel in the perfor-19-23344-01. mance of laboratory radiation protection surveys, personnel dosimetry program, laboratory analysis, and radioactive material control. Provides technical advice to some 350 radiation workers working in about 150 radioisotope laboratories. Teaches in various graduate level courses in Preventive Medicine and Radiology. Provides technical consultation to Director and other Branch Chiefs. Acts as the Director when the Director is absent. Has been designated the Medical Physics Consultant on acquisition and acceptance testing of Computerized Tomography (CT) Systems and Magnetic Resonance Imaging (MRI) Systems for the Army Surgeon This CT and MRI mission is world wide. General.

3. June 1983-June 1989, Chief, Health Physics, Dwight D. Eisenhower Army Medical Center, Ft. Gordon, GA.

Served as Chief, Health Physics, and Radiation Duties: Protection Officer. Responsible for supervision and management of broad scope radiation protection program including management of US Nuclear Regulatory Byproduct Materials License No. 10-12044-03 and Department of Army Radioactive Materials Authorization No. 10-07-Served as Regional Consultant to DOD Health Region 10, which 81. includes 9 Army Community Hospitals, and clinics in Panama and Puerto Rico. Performs Technical Surveys of radioactive materials and radiation producing devices to evaluate health hazards and performs medical physics evaluations to optimize imaging. Provides education support to professional staff. Supervises the personnel dosimetry program and performs dosimetry analysis of both radiation workers and patients. Is the Medical Physics Consultant on acquisition and acceptance testing of Computerized Tomography (CT)

3

Systems and Magnetic Resonance Imaging (MRI) Systems for the Army Surgeon General. This CT and MRI mission is world wide.

4. September 1976 - June 1980, Chief, X-Ray Branch, Academy of Health Sciences, Ft. Sam Houston, TX.

Duties: Programs, plans and supervises overall operation of branch, including performance of 36 instructors and about 430 students annually. Branch is responsible for teaching the x-ray technologist program (radiographic) for the US Army. Also coordinates, plans, and supervises clinical training. Serves as Chairman of X-Ray Specialist Curriculum Committee, and Chairman of Medicine and Surgery Division Physics and Biophysics Committee. Serves as subject matter expert in radiology for Combat Development and Health Care Systems.

5. January 1975 - July 1975, Chief, Health Physics Branch, US Army Environmental Hygiene Agency Regional Activity South, Ft. Sam Houston, TX.

Duties: Conducts radiation protection surveys of US Army installations containing or generating ionizing radiation. Geographical area of support is all states west of the Mississippi River. Also reviews NRC license and DA Authorization applications. Performs technical consultation on radiation safety hazards.

6. March 1974 - December 1974, Chief, Department of Nuclear Medical Sciences, US Army Medical Laboratory, Ft. Sam Houston, TX.

Supervises laboratory procedures and techniques of Duties: radiation biology, radiochemistry, and biophysics for regional reference laboratory. Geographic area of support includes United States, Pacific Region, Korea, and Panama. Supervises radiation detection measurements, preparation and analysis of radioisotopes in support of diagnostic and other clinical procedures. Provides support on environmental surveillance. Advises on radiological hygiene matters to prevent unnecessary exposure of personnel to Performs duty of Chairman, Radioisotope ionizing radiation. Committee, and Radiological Protection Officer. Manages all . aspects of AEC License No. 42-06316-01, and Department of Army Authorization for Radioactive Materials. Performs Health Physics surveys and overall monitoring of all Laboratory Departments engaged in work involving radioactive material.

7. January 1973 - February 1974, Survey Officer, Health Physics Division, US Army Environmental Hygiene Agency, Aberdeen Proving Ground, MD.

Duties: Reviews AEC license and Department of Army Authorizations applications as well as drafts Army directives and technical publications pertaining to radiological health; evaluates proposed in-system items containing or generating ionizing radiation; makes on-site surveys of Army diagnostic, industrial, and therapeutic xray facilities, radioactive sources, accelerators, human use of radioisotopes and other sources of ionizing radiation; prepares reports with recommendations for corrective action; assists in training activities. Performs as Alternate Radiological Protection Officer. This requires preparation and maintenance of records and reports on receipt, issue, use, inventory, storage, and disposal of radioactive materials. Performs health physics surveys of all agency divisions engaged in working with radioactive materials.

8. September 1972 - October 1972, Health Physics Technician, SM1 Nuclear Power Plant, Ft. Belvoir, VA.

Duties: Conducts radiological surveys, performs treatment to maintain proper process fluid conditions of nuclear power plant. Operates nuclear power plant controls and equipment. Assists in refueling operations and preparing spent fuel elements and demineralizers for storage and shipment. Monitors process fluids for radioactivity and performs chemical separations. Conducts radiological surveys of nuclear power plant personnel, equipment, work areas and reactor elements.

# MEMBERSHIPS, PAPERS, PRESENTATIONS AND AWARDS:

Member, Health Physics Society (1973) Member, Eta Chapter, Delta Omega Society (1977)

"The Final Step in Decommissioning of the SM-1A Nuclear Power Plant: A Closeout Survey," AEHA Report No. 43-001-74, Health Physics National Meeting, 1974.

"A Data Base Management System For Real-Time Monitoring of Operating Parameters of A Diagnostic X-Ray System," Ph.D. Dissertation, University of North Carolina, Chapel Hill, NC, 1983.

"Computerized Quality Assurance in Diagnostic Radiology," Health Physics National Meeting, Baltimore, MD, 1983.

"Acceptance Testing of Computerized Tomography Systems," Savannah River Chapter Health Physics Society Meeting, September 1985.

"Operational Problems for a Radiation Protection Program at A Major Medical Institution," Medical Physics in Military Medicine Course, AEHA, MD, September 1987.

"A Protocol to Comply With The Joint Commission of Accreditation of Health Care Organizations Requirements in Diagnostic Radiology," Medical Physics In Military Medicine Course, AEHA, MD, October 1988.

REPLY TO ATTENTION OF

SUBJECT: Report of Shield Assembly Defect for Irradiator

U. S. Nuclear Regulatory Commission, Region I James P. Dwyer, Senior Health Physicist 475 Allendale Road King of Prussia, PA 19406

Mr. Dwyer,

Walter Reed Army Medical Center (WRAMC) uses radioactive material authorized by U.S. Nuclear Regulatory Commission (NRC) Byproduct Material License Number 08-01738-02 with an expiration date of June 30, 2004. This is a medical broadscope Type A license for medical diagnosis, therapy, and research in humans. A product defect with a Cesium-137 irradiator listed under paragraph 6CC of the license has been noted. Initial notification of the problem and the proposed corrective actions was made in a telephone call to Mr. James Dwyer, Senior Health Physicist, USNRC, Region I, King of Prussia, PA at about 2:30 pm on February 11, 2000. The following information is provided in accordance with the requirements of Title 10, Part 21.21.

On February 11, 2000, a problem with shield integrity was noted with a Cesium-137 (Cs-137) instrument calibration source. It is a Gamma Calibration Unit, initially loaded with an

Cs-137 source; the current activity is about The source shield assembly is a <sup>1</sup>/<sub>4</sub> inch steel cylinder 18 inches in diameter, welded to a base plate. A 2-inch cylinder containing the radiation source is located in the middle of the shield assembly with the void between the inner cylinder and the outer shield assembly filled with lead shot. It was observed that the weld between the shield assembly and the base plate was cracked and the shield assembly was at a slight tilt. A small amount of fine lead shot was observed on one side of the base plate. Exposure readings taken at contact with the shield assembly with a portable survey meter indicated 0.3 milliRoentgen/hr. This is a typical reading at contact on the shield assembly. Significant problems would occur if the shield assembly tilted further and the lead shot drained out from around the sealed source. Calculation indicates of Cs-137 with no shielding would yield an exposure rate at one meter of about 20 R/hr.
Industrial Operations Command (IOC), the DOD Executive Agent for disposal of radioactive material, was in the process of contracting with J. L. Shepherd & Associates, San Fernando, CA to remove the source and ship the source and the shield assembly to J.L. Shepherd. J.L. Shepherd employees were on site on February 11, 2000, examined the irradiator, and indicated the first priority should be to weld a steel plate around the shield assembly and to the base plate. IOC was contacted and were willing to expedite the operation. The irradiator had been inventoried on January 7, 2000, and no problems were noted with the irradiator at that time.

Personnel from J.L. Shepherd performed the maintenance fix on Monday February 14, 2000. The work to repair the irradiator shield assembly was accomplished without incident or any additional loss of shielding. It was determined after the shield was stabilized that the source itself moved freely within the cylinder and should be readily transferred to a shipping cask. A leak test of the source was also performed with no leakage indicated.

Three access ports at the top of the shield assembly for adding lead shot were opened and were found to be overflowing with lead shot. After probing with a screwdriver, areas of corroded/oxidized lead shot in big solid chunks were found within the shield assembly. If the lead shot has expanded this may explain how the shield assembly became tilted and why almost none of the lead shot drained out. No void spaces were found in the shield and a thorough survey of the exterior surfaces found no elevated radiation levels. A digital image of the irradiator with the steel collar welded to the base plate and shield assembly is enclosed.

The contractor returned March 27-29, 2000 and prepared and shipped this source and two other irradiators to J.L. Shepherd, San Fernando, CA. No problems with the repaired shield assembly were encountered during the preparation and transfer at WRAMC.

Point of contact for any questions regarding this subject are Colonel William B. Johnson, Chief, Health Physics, or Mr. David Burton, Chief, Radioactive Material Control Branch at (202) 356-0058.

Enclosure as

William B. Jøhnsor

Preventive Medicine Service

Nuclear Regulatory Commission, Region I Medical Licensing Division 475 Alendale Road King of Prussia, Pennsylvania 19406-1415

Dear Sir or Madam:

Walter Reed Army Medical Center (WRAMC) uses radioactive material authorized by U.S. Nuclear Regulatory Commission (NRC) Byproduct Material License number 08-01738-02 with an expiration date of June 30, 2004.

We request to amend NRC license 08-01738-02 issued to WRAMC to appoint Colonel Dale K. Block to replace Colonel Yancy Phillips as the Chairperson of the Radiation Control Committee (RCC). Colonel Block will be the Deputy Director for Clinical Services which is a senior level executive management position, one level below the Hospital Commander. The Radiation Protection Officer, Colonel William B. Johnson, has carefully reviewed the Colonel Block's curriculum vitae (enclosure 1) and recommends approval as Chairperson of the RCC.

We request to amend NRC license 08-01738-02 issued to WRAMC to delete the Cs-137 sealed source irradiator line items 6CC, 7CC, and 8CC from the license. The irradiator was transferred to J.L. Shepard & Associates and removed from building 516, Forest Glen Section on March 29, 2000 (enclosure 2).

For any additional information, please contact the undersigned at (202) 356-0058.

Sincerely,

William B. Johnson

Colonel, U.S. Army Radiation Protection Officer

## **CERTIFICATION OF SOURCE/DEVICE POSSESSION TRANSFER**

This document is to certify that on or about March 30, 2000, J.L. Shepherd and Associates took possession of and title to (1) Each Eberline Instrument Corporation Model 8150-XXXAB, with approximately \_\_\_\_\_\_ of Cesium-137(as of 1967), American Nuclear Type ANC 127 Source Capsule, from U.S. Army, Walter Reed Army Institute of Research; WRAMC. Basement of the Reactor Building, Forest Glen, MD 20907.

This transfer preparation took place under the direct supervision of J.L. Shepherd and Associates' engineer, under JLS&A'S State of California Radioactive Materials License and applicable 49CFR and CA Title 17 Transportation requirements, working under J.L. shepherd and Associates, State of California Radioactive Materials License 1777-19, Amendment 78, Expiration Date 10/11/95, with State of California issued Letter of Timely Renewal, Dated September 21, 1995, in accordance with 10CFR40.51, 49CFR, all regulatory agency licensing and transportation requirements. J.L. Shepherd and Associates per the attached license, or our designated hot cell facility, is licensed to receive, possess and store this source/device.

U.S. Army, Walter Reed Army Institute of Research

Dated: 29 Man 2000

Docket No. 03001317 Control No. 128416

Colonel Michael A. Dunn Commander Department of The Army Walter Reed Army Medical Center Washington, DC 20307-5001

SUBJECT: DEPARTMENT OF THE ARMY, ISSUANCE OF LICENSE AMENDMENT, CONTROL NO. 128416

Dear Colonel Dunn:

This refers to your license amendment request dated July 12, 2000. Enclosed with this letter is the amended license.

Please review the enclosed document carefully and be sure that you understand and fully implement all the conditions incorporated into the amended license. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region I Office, Licensing Assistance Team, (610) 337-5093 or 5239, so that we can provide appropriate corrections and answers.

Thank you for your cooperation.

Sincerely,

Original signed by Neelam Bhalla

Preventive Medicine Service

030-01317

Nuclear Regulatory Commission, Region I Medical Licensing Division 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

Dear Sir or Madam:

Walter Reed Army Medical Center uses radioactive material authorized by U.S. Nuclear Regulatory Commission (NRC) Byproduct Material License number 08-01738-02 with an expiration date of June 30, 2004.

We request to amend NRC License 08-1738-02 to increase the maximum possession limit of  $^{192}$ Ir in section 8H to  $^{100}$ . This  $F_{\rm M}$  increase in the maximum possession limit is to allow for the addition of Intravascular Brachytherapy procedures. The procedures will initially utilize the Cordis Checkmate system. Standard Operating Procedures will be developed and approved by the Radiation Control Committee prior to implementation of this procedure.

We also request to amend NRC License 08-1738-02 to increase the maximum possession limit  $^{153}$ Gd in section 8P to 2 curies per camera. This will allow for additional cameras in Nuclear Medicine.

For any additional information, please contact the undersigned at (202) 356-0058.

Sincerely,

(Johnson

Colonel, U.S. Army Radiation Protection Officer

Colonel William B. Johnson Radiation Protection Officer Department of the Army Walter Reed Army Medical Center MCHL-HP/ Health Physics Office Building 41, Room 38 Washington, DC 20307-5001

SUBJECT: DEPARTMENT OF THE ARMY, ISSUANCE OF LICENSE AMENDMENT, CONTROL NO. 129603

Dear COL. Johnson:

This refers to your license amendment request. Enclosed with this letter is the amended license.

Please note that: i) iridium-192, in the form of sealed sources, has been added to your license under Item 6.DD; ii) the gadolinium-153 possession limit has been increased to 6 curies; and iii) Item 11.D. has been added to your license to allow the approval of medical physicists, to support your intravascular brachytherapy program, by your radiation protection committee. Please review the enclosed document carefully and be sure that you understand and fully implement all the conditions incorporated into the amended license. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region I Office, Licensing Assistance Team, (610) 337-5239, so that we can provide appropriate corrections and answers.

In accordance with 10 CFR 2.790, a copy of this letter will be placed in the NRC Public Document Room and will be accessible from the NRC Web site at <u>http://www.nrc.gov/NRC/ADAMS/index.html.</u>

tested for leakage and/or contamination.

ATORY COMMISSION

- F. The test shall be capable of detecting the presence of 0.005 microcurie of radioactive material on the test sample. If the test reveals the presence of 0.005 microcurie or more of removable contamination, a report shall be filed with the U.S. Nuclear Regulatory Commission and the source or detector cell shall be removed immediately from service and decontaminated, repaired, or disposed of in accordance with Commission regulations. The report shall be filed within five days of the date the leak test result is known with the U.S. Nuclear Regulatory Commission, Region I, ATTN: Chief, Nuclear Materials Safety Branch, 475 Allendale Road, King of Prussia, Pennsylvania 19406. The report shall specify the source or detector cell involved, the test results, and corrective action taken.
- G. The licensee is authorized to collect leak test samples for analysis by the licensee. Alternatively, tests for leakage and/or contamination may be performed by persons specifically licensed by the Commission or an Agreement State to perform such services.
- 17. Sealed sources or detector cells containing licensed material shall not be opened or sources removed from source holders by the licensee
- 18. The licensee is authorized to hold radioactive material with a physical half-life of less than 65 days and Sulfur 35, Cobalt 58, Iridium 192, Scandium 46, for decay-in-storage before disposal in ordinary trash, provided:

A. Waste to be disposed of in this manner shall be held for decay a minimum of ten half-lives.

B. Before disposal as ordinary trash, the waste shall be surveyed at the container surface with the appropriate survey instrument set on its most sensitive scale and with no interposed shielding to determine that its radioactivity cannot be distinguished from background. All radiation labels shall be removed or obliterated.

- C. A record of each such disposal permitted under this License Condition shall be retained for three years. The record must include the date of disposal, the date on which the byproduct material was placed in storage, the radionuclides disposed, the survey instrument used, the background dose rate, the dose rate measured at the surface of each waste container, and the name of the individual who performed the disposal.
- 19. The licensee shall possess and use byproduct material for human research in accordance with the prescriptive and performance criteria in all sections of 10 CFR Part 35 except sections 35.49(a) and (b), 35.100, 35.200, and 35.300.

REPLY TO ATTENTION OF

Preventive Medicine Service

030-01317 030-06895

Nuclear Regulatory Commission, Region I Medical Licensing Division 475 Allendale Road King of Prussia, Pennsylvania 19406-1415

#### Dear Sir or Madam:

Walter Reed Army Medical Center uses radioactive material authorized by U.S. Nuclear Regulatory Commission (NRC) Byproduct Material License number 08-01738-02 with an expiration date of June 30, 2004 and Irradiator License number 08-1738-03 with an expiration date of November 30, 2011.

We request to change the Radiation Safety Officer (RSO) on both of the above licenses to Lieutenant Colonel John R. Mercier with an effective date of 15 August 2002. LTC Mercier's CV and NRC Form 313 are enclosed. LTC Mercier previously served for 4 years as the PSO on a Type A Broad Scope License (#53-00458-04) at Tripler Army Medical Center.

For any additional information, please contact the undersigned at (202) 356-0058.

Sincerely,

hnson, Ph.D.

Radiation Safety Officer

## LIEUTENANT COLONEL JOHN R. MERCIER, Ph.D., PE, DABR Nuclear Medical Science Officer

U.S. Army Nuclear and Chemical Agency

wk: (703)806-7860 cell: ( mercier@usanca-smtp.army.mil

## FORMAL EDUCATION

Doctor of Philosophy (Radiological Physics), The University of Texas Health Science Center, San Antonio, Texas, 42 6 Master of Engineering (Nuclear). Cornell University, Ithaca, New York,

Bachelor of Engineering (Nuclear), Cornell University, Ithaca, New York, Bachelor of Engineering Science (Nuclear), The University of Texas, Austin, Texas,

#### **PROFESSIONAL CREDENTIALS**

Diplomate, American Board of Radiology, Dual Certified in Diagnostic Radiological Physics and Medical Nuclear Physics, ABR Physicist # P1779, 1995

Licensed Medical Physicist, Texas, # MP0402, 1995

Licensed Professional Nuclear Engineer, Texas PE Registration # 80363, 1995

Licensed Nuclear Plant Senior Reactor Operator, TRIGA Reactor, NRC License #SOP-10973, 1990

Certified Hazard Control Manager, International Board of Hazard Control Management, Master Certification # 2490, 1993

#### **CURRENT AFFILIATIONS AND PROFESSIONAL MEMBERSHIPS**

Sigma Xi – The Scientific Research Society

Tau Beta Pi - The National Engineering Honor Society

American Nuclear Society

Health Physics Society

\* Past-President for Hawaii Chapter

American Association of Physicists in Medicine

\* Member of Task Group 10 on computed radiography digital imaging North Atlantic Treaty Organization (NATO):

U.S. Delegate to NATO Land Group 7 on Joint NBC Defense

U.S. Delegate to NATO Land Group 7 Expert Subgroup on Sampling and

Identification of Biological, Chemical and Radiological Agents

U.S. Delegate to NATO Land Group 7, Expert Working Group on Low-Level Radiation

U.S. Delegate to NATO Standardization Agency's NBC Working Group

U.S. Delegate to NATO Standardization Agency's Medical NBC Working Party

U.S. Delegate to NATO Research and Technology Board's Task Group on Radiation Treatments and Countermeasures

The Technical Cooperation Program (TTCP) of the American, British, Canadian, and Australian (ABCA) Alliance:

Member, Action Group 48 on Radiation Hazards

Department of Defense:

Chair, DoD Weapons of Mass Destruction Human Response Panel

Member, Nuclear Warfare Casualty Panel of Experts, Joint Readiness Clinical Advisory Board

Department of the Army:

Alternate Army Reactor Officer

Member, Nuclear Employment Augmentation Team

#### **PROFESSIONAL AND LEADERSHIP EXPERIENCE**

#### Nuclear Scientist 8/99 - present

U.S. Army Nuclear and Chemical Agency, Springfield, VA

Primary consulting subject matter expert (SME) to Army Staff and other DoD/NATO/U.S. Government agencies on the medical effects of nuclear weapons and radiation. Sets policy on friendly troop safety risk criteria and enemy personnel casualty criteria for nuclear weapons effects. Develops casualty estimation models for nuclear, biological and chemical (NBC) weapons. Serves on numerous DoD and NATO SME panels for NBC research, operational doctrine and equipment development. Develops Army R&D requirements for radiobiology, biomedical technology and NBC operations. Serves as Alternate Army Reactor Officer for the Army Reactor Office that maintains oversight of WSMR and APG fast burst reactors. Serves on the Nuclear Employment Augmentation Team in support of CINC's.

#### Doctoral Student 8/96 – 8/99

The University of Texas Health Science Center, San Antonio, TX

Research focused on diagnostic imaging, the use of Monte Carlo codes to simulate x-ray beam formation and transport, measurement of x-ray spectra, computed radiography and other digital imaging systems. Teaching duties and course work broadly covered the medical radiological physics profession.

#### **Chief, Health Physics** 6/92 – 6/96 Tripler Army Medical Center, Honolulu, HI 96859-5000

Executive agent and Radiation Safety Officer for a broad-scope USNRC radioactive material license (#53-00458-04). Directed comprehensive health physics services for a major teaching and research hospital. Developed or approved nuclear medicine, diagnostic radiology and radiation therapy QC protocols. Performed gamma camera acceptance testing. Evaluated and approved all Pacific region radiological facility designs. Conducted health and medical physics audits. Routinely provided formal and informal radiation safety training and imaging science lectures to nuclear medicine and radiology technologists. Routinely counseled physicians, patients, and hospital staff on radiation effects. Occasionally lectured radiology residents in imaging physics.

**Project Engineer**, Johnston Atoll Plutonium Mining Project 5/91 - 6/92 Defense Nuclear Agency, Kirtland AFB, NM 87115-5000

Spearheaded the Defense Nuclear Agency's \$15 million Plutonium Mining Project. Led world's first successful remediation of plutonium contaminated soil. Designed several multichannel analyzer radioassay systems using sodium iodide and high-pure germanium spectroscopy detectors. Developed and enforced various radiation safety, bioassay, and respiratory protection programs.

#### **Graduate Student** 8/89 – 5/91 Cornell University, Ithaca, NY

Research focused on characterizing radiation damage to electronic components using the Cornell gamma irradiation facility. Gained experience as a federally licensed nuclear plant senior reactor operator (License # SOP-10973) that required mastery of all research facilities and radiological monitoring equipment within the reactor building. Developed experimental research protocols for the TRIGA reactor and assisted in training a reactor operator. Course work broadly covered the nuclear engineering profession.

#### **Radiation Protection Officer** 12/85 - 12/88 Darnall Army Community Hospital, Ft Hood, TX 76544-5063

Executive agent and Radiation Safety Officer for USNRC limited-scope radioactive material license (#42-19113-01). Hospital consultant for health physics, diagnostic radiology physics, & medical nuclear physics. Developed radiation protection, radiology QA/QC, & nuclear medicine QA/QC programs. Performed health & medical physics audits, calibrations, x-ray system & shielding surveys. Troubleshooted image quality problems. Trained all radiation workers.

#### Nuclear Medical Science Officer 1/85 - 12/85 US Army Environmental Hygiene Agency, APG, MD 21010-5422

Consulted Army and DoD installations for adequate radiation protection, radiology QA/QC, and nuclear medicine QA/QC programs. Wrote safety and QC procedures and evaluated x-ray system performance. Conducted radiological shielding evaluations and health hazard assessments of equipment and facilities.

**Commander, Detachment 1, A Company** 12/82 – 12/84 249<sup>th</sup> Supply and Transport Battalion, 49<sup>th</sup> Armored Division, Texas Army National Guard, Killeen, TX

Exercised command. Led with honor and respect.

**Platoon Leader, HHQ Company** 8/81 – 11/82 249<sup>th</sup> Supply and Transport Battalion, 49<sup>th</sup> Armored Division, Texas Army National Guard, Austin, TX

Developed leadership skills.

## SUBJECT: DEPARTMENT OF THE ARMY, ISSUANCE OF LICENSE AMENDMENT, CONTROL NOS. 131859 AND 131860

Dear Dr. Johnson:

This refers to your request dated July 19, 2002, for amendment to the above listed NRC licenses. Enclosed with this letter are the amended licenses.

Please review the enclosed documents carefully and be sure that you understand and fully implement all the conditions incorporated into the amended licenses. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region I Office, Licensing Assistance Team, (610) 337-5239, so that we can provide appropriate corrections and answers.

In accordance with 10 CFR 2.790, a copy of this letter will be placed in the NRC Public Document Room and will be accessible from the NRC Web site at http://www.nrc.gov/reading-rm.html.

Thank you for your cooperation.

Sincerely,

Original signed by Sattar Lodhi, Ph.D.

#### UNITED STATES NUCLEAR REGULATORY COMMISSION **REGION I** 475 ALLENDALE ROAD KING OF PRUSSIA, PENNSYLVANIA 19406-1415

January 8, 2003

License Nos.

08-01738-02 08-01738-03

Docket Nos. 03001317 03006895 Control Nos. 132452 132453

Thomas M. Fitzpatrick, M.D., Ph.D. Deputy Commander for Clinical Services and Chair. Radiation Control Committee Department of the Army Walter Reed Army Medical Center (WRAMC) Washington, DC 20307-5001

#### SUBJECT: DEPARTMENT OF THE ARMY, ISSUANCE OF LICENSE AMENDMENT. CONTROL NO. 132452 AND VOIDANCE OF APPLICATION FOR LICENSE AMENDMENT, CONTROL NO. 132453

Dear COL Fitzpatrick:

This refers to your license amendment request naming you as Chair of the Radiation Control Committee. Enclosed with this letter is amended broadscope license (License No. 08-01738-02). Since your irradiator license does not require a Radiation Control Committee, your amendment request is not necessary for License No. 08-01738-03. This matter was discussed with your Radiation Safety Officer on January 7, 2003. We have, therefore, voided your application to amend License No. 08-01738-03 (irradiator license). This action is taken without prejudice to the resubmission of your request.

Please review the enclosed document carefully and be sure that you understand and fully implement all the conditions incorporated into the amended license. Please note the last condition on your license indicates that, "This license condition applies only to those procedures that are required to be submitted in accordance with the regulations." Therefore, any procedures submitted that were not required by regulation to be submitted, e.g., calibration of dose calibrators, will not be considered a part of your license and were not reviewed during the licensing process. These procedures will be reviewed during inspections, as necessary. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region I Office, Licensing Assistance Team, (610) 337-5239, so that we can provide appropriate corrections and answers.

In accordance with 10 CFR 2.790, a copy of this letter will be placed in the NRC Public Document Room and will be accessible from the NRC Web site at http://www.nrc.gov/readingrm.html.

#### UNITED STATES NUCLEAR REGULATORY COMMISSION REGION I 475 ALLENDALE ROAD KING OF PRUSSIA, PENNSYLVANIA 19406-1415

May 26, 2004

Docket No. 03001317 Control No. 133540 License No.

08-01738-02

LTC John R. Mercier, Ph.D. Medical Service Chief, Health Physics Department of the Army Walter Reed Army Medical Center MCHL-HP/Health Physics Office Building 41, Room 38 Washington, DC 203075001

# SUBJECT: DEPARTMENT OF THE ARMY, APPLICATION FOR LICENSING ACTION, CONTROL NO. 133540

Dear LTC Mercier:

This refers to your license amendment request. Enclosed with this letter is the amended license. Building 40 may be released for unrestricted use.

Please review the enclosed document carefully and be sure that you understand and fully implement all the conditions incorporated into the amended license. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region I Office, Licensing Assistance Team, (610) 337-5239, so that we can provide appropriate corrections and answers.

In accordance with 10 CFR 2.790, a copy of this letter will be placed in the NRC Public Document Room and will be accessible from the NRC Web site at <u>http://www.nrc.gov/reading-rm.html.</u>

Thank you for your cooperation.

Sincerely,

Original signed by James P. Dwyer

MATERIALS LICENSE

Amendment No. 76 *Nuplicate* Pursuant to the Atomic Energy Act of 1954, as amended, the Energy Reorganization Act of 1974 (Public Law 93-438), and Title 10, Code of Federal Regulations, Chapter I, Parts 30, 31, 32, 33, 34, 35, 36, 39, 40, and 70, and in reliance on statements and representations heretofore made by the licensee, a license is hereby issued authorizing the licensee to receive, acquire, possess, and transfer byproduct, source, and special nuclear material designated below; to use such material for the purpose(s) and at the place(s) designated below; to deliver or transfer such material to persons authorized to receive it in accordance with the regulations of the applicable Part(s). This license shall be deemed to contain the conditions specified in Section 183 of the Atomic Energy Act of 1954, as amended, and is subject to all applicable rules, regulations, and orders of the Nuclear Regulatory Commission now or hereafter in effect and to any conditions specified below.

Dear Sir or Madam:

Enclosed is the Walter Reed Army Medical Center NRC broad scope license 10-year renewal application (Form 313 with attachments). Our current license, No. 08-01738-02, is set to expire on 30 June 2004. Hence, this application is hereby rendered within the 30-day timeliness rule.

Please note that the renewal application for the broad scope license includes provisions to absorb our irradiator license, No. 08-01738-03. Our intent is to consolidate both licenses. 08-01738-02 135048 (TEAM) 03006895 (AMEND) 03001317 Your point of contact for this Command is Lieutenant Colonel John Mercier, Ph.D., (202) 356-0058.

Sincerely,

Thomas M. Fitzpatrick Colonel, Medical Corps Deputy Commander for Clinical Services

Enclosure

The NRC recently completed a satisfactory review of our Financial Assurance Submittal with Statement of Intent and Decommissioning Funding Plan [Refer to NRC letter dated April 13, 2004, signed by the Chief of the Region I Nuclear Materials Safety Branch, NRC Control Nos. 132079 and 132080].

EX 2 portions

#### **ITEM #7 ATTACHMENT**

#### INDIVIDUALS RESPONSIBLE FOR RADIATION SAFETY PROGRAM

1. A NRC Form 313A, curriculum vitae and copy of board certification for the Radiation Safety Officer (RSO), LTC John R. Mercier, Ph.D., is attached.

2. For human use (e.g., diagnosis, therapy and human studies), licensed material shall be used by or under the supervision of individuals designated by the Walter Reed Army Medical Center (WRAMC) Radiation Safety Committee (RSC). The training and experience of authorized users, authorized nuclear pharmacists, and authorized medical physicists will be evaluated using the criteria in 10 CFR 35. The RSC, with RSO approval, may grant case-by-case exceptions.

3. For non-human use (e.g., research and development), Principle Investigators and Co-Investigators who meet training and experience criteria expressed in NUREG 1556, Volume 7, Section 8.7.2 (December 1999), may be designated as authorized users by the RSO. The RSC, with RSO approval, may grant case-by-case exceptions.

4. For self-shielded irradiators, personnel who meet training and experience criteria expressed in NUREG 1556, Volume 5, Appendix G (October 1998), will be designated as authorized users by the RSO. The RSC, with RSO approval, may grant case-by-case exceptions.

5. 10CFR35.24(c) Waiver. To meet military operational contingencies, support homeland security missions, or support national security objectives, the RSO may be sent on extended deployments (60 to 180 days) without warning. The RSO need not be present as long as communications between the RSO and WRAMC management can be maintained (e.g., phone, email, video teleconferencing, etc.). In such cases, the RSC will designate an acting RSO who meets the training and experience criteria in 10CFR35. Since WRAMC has sufficient depth in authorized users and professional health physics staff, the RSO can ensure that one or more authorized users or staff health physicists are fully qualified to serve as acting RSO via a signed preceptor statement (NRC 313A). In the event communications cannot be maintained, 10CFR35.24(c) will apply starting from the time that communications fail.

6. Except for appointment of a permanent RSO, the RSC maintains authority for designating the responsible radioactive material users (i.e., authorized users, authorized medical physicists, and authorized nuclear pharmacists). The criterion used by the RSC in approving users is taken from the appropriate NUREG 1556 series. As well, RSO approval is required.

7. The RSC also controls it's own membership to allow for personnel turnover, as well as, gains and losses in functional use of radioactive material. The majority of members are trained and experienced in the safe use of radioactive material. The minimum voting membership of the RSC tends to be the Deputy Commander for Clinical Services (DCCS, Chair and Management Rep), the RSO, a staff health physicist, a staff radiation therapy physicist, a nuclear pharmacy representative, a nuclear medicine representative, a nursing representative, a Walter Reed Army Institute of Research (WRAIR) representative and an Armed Forces Institute of Pathology (AFIP) representative. A quorum requires at least half the voting members, of which, the RSO, the nursing representative and the DCCS (or his management substitute) must attend.

#### ITEM #8 ATTACHMENT TRAINING FOR INDIVIDUALS WORKING IN OR FREQUENTING RESTRICTED AREAS

The radiation safety training program is managed by the WRAMC Health Physics Office and is designed to ensure compliance with 10CFR 19, 20, 30 and 35. Workers likely to receive an annual occupational dose in excess of 1 mSv (100 mrem) receive initial and refresher training commensurate with their duties. To ensure the training is tailored for different audiences and/or targeted for site-specific functions, the Health Physics staff often refines radiation safety lectures and training materials. However, research staffs receive training that generally follows NUREG 1556, Volume 7, Appendix J (December 1999) and medical staffs receive training that generally follows NUREG 1556, Volume 9, Appendix J (October 2002). The RSO maintains authority to approve changes to the radiation safety training program. The radiation safety training program may be examined in detail during routine NRC inspections.

#### ITEM #9 ATTACHMENT FACILITIES AND EQUIPMENT

1. Irradiators. WRAMC will ensure that each area where a self-shielded irradiator is located corresponds to the 'Conditions of Normal Use' and 'Limitations and/or Other Considerations of Use' on the respective irradiator Sealed Source and Device (SSD) Registration Certificate; the floor beneath each self-shield irradiator is adequate to support the weight of the irradiator; each self-shielded irradiator is secured to prevent unauthorized access or removal; and each area where a self-shielded irradiator is located is equipped with an automatically operated fire detection and control system (sprinkler, chemical, or gas) or the location of the area and other controls ensure a low-level radiation risk attributable to fires. Currently, the self-shielded irradiators are located as follows:

Georgia Ave., Washington, D.C.

B ..... Forrest Glen Annex, Silver Spring. MD.

C. \_\_\_\_\_ Glen Annex, Silver Spring, MD. WRAMC Building 2, 6900 Building 503 (WRAIR), Building 503 (WRAIR), Forrest

Procedures for routine maintenance of the self-shielded irradiators that follow manufacturer's written instructions are implemented and maintained. Non-routine maintenance is only performed by the irradiator manufacturer or by other persons authorized by the NRC or an Agreement State.

2. Facilities. The Radiation Safety Committee (RSC) maintains authority for approving radioactive material use, storage and waste facilities. Facilities are evaluated on their adequacy to protect health and minimize danger to life and property IAW 10CFR 30.33(a)(2) and 35.18(a)(3). As appropriate, the RSC considers factors such as ALARA design, planned use of facility, type and quantity of radioactive material, protective equipment, access control, contamination control, ventilation, filtration, shielding, alarms and radiation monitoring instruments when evaluating a facility for licensed activities. Isotope laboratories and use areas tend to have impervious floors walls and countertops. Facility diagrams are attached for the Radiopharmacy Hot Lab, and the Radiation Therapy Sealed Source Storage Room

Building 2, WRAMC. Additional laboratory and facility diagrams may be examined during routine NRC inspections.

3. Instruments. To ensure compliance with 10CFR 20 and 35 requirements, WRAMC maintains a variety of radiation monitoring and survey instruments, as well as, gamma well counters and liquid scintillation counters. Radiation monitoring instruments will be calibrated by the manufacturer or other appropriately qualified person, business or agency. Additionally, WRAMC reserves the right to develop and implement survey meter calibration procedures compliant with 10CFR 20.1501 and 35.61. The RSO maintains authority for amending instrument specifications and the calibration program.

4. Dose Calibrators. Equipment used to measure dosages will be calibrated IAW nationally recognized standards or the manufacturer's instructions.

NRC License 08-01738-02 R wal Application

 $\diamond$ 

#### ITEM #10 ATTACHMENT RADIATION SAFETY PROGRAM

1. Audit Program. In accordance with 10CFR 20.1101, the RSO evaluates, or arranges for guest auditors to evaluate, the radiation safety program at least once a year. Executive management and the RSC are briefed on the results of each audit. Audit findings are addressed and tracked to resolution by the RSO and/or the RSC. The RSO maintains authority for amending the audit program.

2. Material Receipt and Accountability. In accordance with 10CFR 20, 30 and 33, WRAMC has established cradle-to-grave tracking of radioactive materials. For non-exempt sealed sources, physical inventories are conducted at least every six months.

3. Occupational Dose. Occupational doses at WRAMC have been tracked for many years and are well known for the various occupational groups. Unmonitored workers are not likely to exceed 10% the allowable annual limits specified in 10CFR 20. Externally dosed workers specified by 10CFR 20.1502(a) will enter the dosimetry program and receive an extremity and/or whole body dosimeter. Internally dosed workers specified by 10CFR 20.1502(b) will enter the dosimetry specified by 10CFR 20.1502(b) will enter the dosimetry program and be assessed for internal uptake via bioassay. Dosimetry services, currently provided by the Army, are NVLAP accredited.

4. Area Surveys. WRAMC has developed and implemented written procedures for area surveys IAW 10CFR 20.1101 that meets the requirements of 10CFR 20.1501 and 35.70.

5. Safe Use of Unsealed Radioactive Material. WRAMC has developed and implemented written procedures for safe use of unsealed licensed material that meets the requirements of 10CFR 20.1101 and 20.1301.

6. Spill Procedures. WRAMC has developed and implemented written procedures for safe response to spills of licensed material that meets the requirements of 10CFR 20.1101

7. Leak Tests. WRAMC has developed and implemented written procedures for leak tests that meet the requirements of 10CFR 20 and 35.67.
NRC License 08-01738-02 Rei /al Application

# ITEM #11 ATTACHMENT WASTE MANAGEMENT

1. Procedures. WRAMC has developed and implemented written waste disposal procedures for licensed material IAW 10CFR 20.1101, that also meet to applicable section of Subpart K to 10CFR 20 and 10CFR 35.92. Disposal of the licensed material in the irradiators will be by transfer of the irradiators to the supplier or to a licensee authorized to accept the irradiators.

2. Facility. Attached is a diagram of the Radioactive Waste Facility, Building Forrest Glen Annex. Solid waste is shipped from this facility, liquid waste is sampled for release to the sewer from this facility, and short-lived waste is decayed and released at this facility. The building was originally designed, built and operated as a research reactor facility (decommissioned in 1979) with low vulnerability to hazards. The brick and concrete building is secured with locked metal doors, perimeter fence and locked gate. It has a forced circulation air system, heating and cooling system, alarm system, walk-in freezer, fire hydrant, and fire extinguisher.

## ITEMS #7 THROUGH #11 RADIATION SAFETY COMMITTEE BROAD SCOPE FLEXIBILTY

1. Except for NRC approval of the RSO, the Radiation Safety Committee (RSC) intends to continue to assume full decision and approval authority for all aspects of the broad scope license and radiation safety program. WRAMC has a long history of NRC compliance excellence and this, in part, is a result of the RSC having the authority to promptly address reach closure on issues that would otherwise enter a license amendment process. Under this renewal of the broad scope license, the WRAMC RSC requests continued flexibility by remaining exempt from submitting a multitude of license amendments related to Items #7 through #11. The criteria the RSC will use to approve new users, new procedures, new facilities and so forth, is the following:

A. The RSC decision must not be a detriment to safety, health, or the environment.

B. The criteria provided in the NUREG 1556 Series (e.g., Volumes 5, 7, 9 & 11), 10CFR20 through 10CFR35, NRC Information Notices, ANSI standards, or other appropriate references will serve a basis for the RSC's approval or disapproval decisions.

C. For all RSC decisions that directly affect the Radiation Safety Program, to include approval of radioactive material users, the RSO must be in agreement.

2. The RSC may also defer full decision authority for selected topics to the RSO. These are topics or programs that are exclusively, or nearly exclusively, the management purview of the RSO. For example, the RSO will maintain authority to approve changes to the radiation safety training program, for amending instrument specifications, and for amending the audit program.

# The American Board of Badinloy Organized through the cooperation of the "American College of Radiology, the American Roentgen Ray Society, the American Radium Society, the Radiological Society of North America, the Section on Radiology of the American Medical Association, the American Society for Therapeutic Radiology and Onocology, the Association of University Radiologists, and American Association of Physicists in Medicine Hereby certifies that John Rene Mercier, M.E. Has pursued an accepted course of graduate study und clinical work, has met certain standards and qualifications and has passed the examinations conducted under the authority of The American Board of Radiology

On this seventh day of June, 1995 Thereby demonstrating to the satisfaction of the Board that he is qualified to practice the specialty of

Diagnostic Radiological and Medical Nuclear Physics

Dougla Maynard no Welles Jenselle MD My Val Capp.

LIEUTENANT COLONEL JOHN R. MERCIER, Ph.D., PE, DABR, SRO Leader, U.S. Army Radiological Advisory Medical Team Chief, Health Physics, Walter Reed Army Medical Center Radiation Safety Officer, Walter Reed Army Medical Center Radiation Safety Officer, North Atlantic Regional Medical Command Chair, DoD Weapons of Mass Destruction Human Response Panel Senior NATO Umpire, Operational and Forensic Sampling of Radiological Agents

> Walter Reed Army Medical Center 6900 Georgia Ave., NW Bldg 41, Room 38 Washington, D.C. 20307-5001 wk: (202) 356-0058 john.mercier@us.army.mil

## FORMAL EDUCATION

Doctor of Philosophy (Radiological Physics), The University of Texas Health Science Center, San Antonio, Texas

Master of Engineering (Nuclear), Cornell University, Ithaca, New York, Bachelor of Engineering Science (Nuclear), The University of Texas, Austin, 1 exas

## PROFESSIONAL CREDENTIALS

Diplomate, American Board of Radiology, Dual Certified in Diagnostic Radiological Physics and Medical Nuclear Physics, DABR Physicist # P1779, 1995

Licensed Medical Physicist, Texas, # MP0402, 1995

Licensed Professional Nuclear Engineer, Texas PE Registration # 80363, 1995

Licensed Nuclear Plant Senior Reactor Operator, TRIGA Reactor, NRC License #SOP-10973, 1990

Certified Hazard Control Manager, International Board of Hazard Control Management, Master Certification # 2490, 1993

"A" Proficiency Designator – Professional credential awarded to recognized experts by the Surgeon General of the United States Army, 2003

#### AFFILIATIONS AND PROFESSIONAL MEMBERSHIPS

Member, Sigma Xi – The Scientific Research Society

Member, Tau Beta Pi – The National Engineering Honor Society

Member, American Nuclear Society

Member, Health Physics Society

Past President for Hawaii Chapter

Member, American Association of Physicists in Medicine

North Atlantic Treaty Organization (NATO):

Senior NATO Umpire, Land Group 7 Expert Subgroup on Sampling and Identification of Biological, Chemical and Radiological Agents

Past Head of U.S. Delegation, Expert Subgroup on Sampling and Identification of Radiological Agents

Past Member, Land Group 7 on Joint Nuclear, Biological and Chemical (NBC) Defense

Past Member, Land Group 7, Expert Working Group on Low-Level Radiation

Past Member, Operational NBC Working Group

Past Member, Medical NBC Working Party

Past Member, Task Group on Radiation Treatments and Countermeasures

The Technical Cooperation Program (TTCP) of the American, British, Canadian, and Australian (ABCA) Alliance:

Member, Technical Panel 13 on Radiation Hazards

Department of Defense:

Leader, U.S. Army Radiological Advisory Medical Team

Chair, DoD Weapons of Mass Destruction Human Response Panel

Lead Scientist, Special Weapons Operational Reconnaissance Detachment

Past Member, Nuclear Warfare Casualty Panel of Experts, Joint Readiness Clinical Advisory Board

Standing Member, DoD RADIAC Working Group

Member, Joint DoD/DOE Nuclear Weapon Accident Response Steering Group (NWARSG) and the NWARSG Technical Working Group

## PROFESSIONAL AND LEADERSHIP EXPERIENCE

#### **Chief, Health Physics** 8/02 – present Walter Reed Army Medical Center, Washington, D.C.

Lead the U.S. Army Radiological Advisory Medical Team (RAMT) in rapid response missions to save lives anywhere in the world. Chair the DoD Weapons of Mass Destruction Human Response Panel which is responsible for defining casualty criteria and developing casualty prediction models. Serve as executive agent and Radiation Safety Officer for broad-scope USNRC radioactive material and irradiator licenses (#'s 08-01738-02 and 08-01738-02). Direct comprehensive health physics services for world-renowned medical and research centers to include Walter Reed Army Institute of Research, the Armed Forces Institute of Pathology and Walter Reed Army Medical Center. Serve as regional Radiation and Laser Safety Officer and provide oversight and mission support services to Army medical facilities within the 21-state North Atlantic Regional Medical Command's umbrella of responsibility. Identify and train military scientists, as well as, develop test plans, techniques and procedures for the DoD Special Weapons Operational Reconnaissance Detachment (SWORD) in support of Combatant Commanders. Manage ~\$500K annually and supervise 20 health physics professionals.

## Nuclear Scientist 8/99 – 8/02 U.S. Army Nuclear and Chemical Agency, Springfield, VA

Served as primary consulting subject matter expert (SME) to Army Staff and other DoD/NATO/U.S. Government agencies on the medical effects of nuclear weapons and radiation. Set policy on friendly troop safety risk criteria and enemy personnel casualty criteria for nuclear weapons effects. Developed casualty estimation models for nuclear, biological and chemical (NBC) weapons. Served on numerous DoD and NATO SME panels for NBC research, operational doctrine and equipment development. Developed Army R&D requirements for radiobiology, biomedical technology and NBC operations. Served as Alternate Army Reactor Officer for the Army Reactor Office that maintains oversight of WSMR and APG fast burst reactors. Served on the Nuclear Employment Augmentation Team in support of Combatant Commanders.

# Doctoral Student

The University of Texas Health Science Center, San Antonio, TX

Research focused on diagnostic imaging, the use of Monte Carlo codes to simulate x-ray beam formation and transport, measurement of x-ray spectra, computed radiography and other digital imaging systems. Teaching duties and course work broadly covered the medical radiological physics profession.

Chief, Health Physics 6/92 – 6/96 Tripler Army Medical Center, Honolulu, HI 96859-5000

Executive agent and Radiation Safety Officer for a broad-scope USNRC radioactive material license (#53-00458-04). Directed comprehensive health physics services for a major teaching and research hospital. Developed or approved nuclear medicine, diagnostic radiology and radiation therapy QC protocols. Performed gamma camera acceptance testing. Evaluated and approved all Pacific region radiological facility designs. Conducted health and medical physics audits. Routinely provided formal and informal radiation safety training and imaging science lectures to nuclear medicine and radiology technologists. Routinely counseled physicians, patients, and hospital staff on radiation effects. Occasionally lectured radiology residents in imaging physics.

Project Engineer, Johnston Atoll Plutonium Mining Project 5/91 - 6/92 Defense Nuclear Agency, Kirtland AFB, NM 87115-5000

Spearheaded the Defense Nuclear Agency's \$15 million Plutonium Mining Project. Led world's first successful remediation of plutonium contaminated soil. Designed several multichannel analyzer radioassay systems using sodium iodide and high-pure germanium spectroscopy detectors. Developed and enforced various radiation safety, bioassay, and respiratory protection programs.

Exle

**Graduate Student** Cornell University, Ithaca, NY

Research focused on characterizing radiation damage to electronic components using the Cornell gamma irradiation facility. Gained experience as a federally licensed nuclear plant senior reactor operator (License # SOP-10973) that required mastery of all research facilities and radiological monitoring equipment within the reactor building. Developed experimental research protocols for the TRIGA reactor and assisted in training a reactor operator. Course work broadly covered the nuclear engineering profession.

### Radiation Protection Officer 12/85 - 12/88 Darnall Army Community Hospital, Ft Hood, TX 76544-5063

Executive agent and Radiation Safety Officer for USNRC limited-scope radioactive material license (#42-19113-01). Hospital consultant for health physics, diagnostic radiology physics, & medical nuclear physics. Developed radiation protection, radiology QA/QC, & nuclear medicine QA/QC programs. Performed health & medical physics audits, calibrations, x-ray system & shielding surveys. Troubleshooted image quality problems. Trained all radiation workers.

## Nuclear Medical Science Officer 1/85 - 12/85 US Army Environmental Hygiene Agency, APG, MD 21010-5422

Consulted Army and DoD installations for adequate radiation protection, radiology QA/QC, and nuclear medicine QA/QC programs. Wrote safety and QC procedures and evaluated x-ray system performance. Conducted radiological shielding evaluations and health hazard assessments of equipment and facilities.

**Commander, Detachment 1, A Company** 12/82 – 12/84 249<sup>th</sup> Supply and Transport Battalion, 49<sup>th</sup> Armored Division, Texas Army National Guard, Killeen, TX

Exercised command. Led with honor and respect.

Platoon Leader, HHQ Company 8/81 – 11/82 249<sup>th</sup> Supply and Transport Battalion, 49<sup>th</sup> Armored Division, Texas Army National Guard, Austin, TX

Developed leadership skills.

## RECENT PROFESSIONAL SHORT COURSES AND EXERCISES

Radiological Mass Casualty Medical Preparations Course, 17-20 Feb 2004 Course Director and Lead Instructor, Walter Reed Army Medical Center

Nuclear, Radiation and High-Yield Explosives (NRE) Course, 10 Feb – 4 May 2004 Invited Lecturer, Uniformed Services University of the Health Sciences

North Atlantic Treaty Organization (NATO) Sampling and Identification of Radiological Agents (SIRA) Field Trials, 21-26 Sep 2003 Senior NATO Umpire, NATO Land Group 7 (Joint NBC Defense)

Radiological Accident Command, Control, and Coordination Course, 18-21 Aug 2003 Student, Defense Nuclear Weapons School

Hazard Prediction Assessment Capability (HPAC) Software Basic Course, 15-18 Jul 2003 Student, Defense Threat Reduction Agency

Medical Effects of Ionizing Radiation Course, 6-7 May 2003 Student, Uniformed Services University of the Health Sciences

Center for Disease Control (CDC) Radiological Event Tabletop Exercise – Louisville, KY, 11 Feb 03 Leader, U.S. Army Radiological Advisory Medical Team, DoD

Train the Trainer: Transportation Emergency Preparedness Program, 25 Jan 2003 Student, Department of Energy -- National Nuclear Security Administration

Operation Diligent Warrior Nuclear Weapon Accident Exercise, 7-25 Oct 2002 Leader, U.S. Army Radiological Advisory Medical Team, DoD

NATO Staff Officer's NBC Defense Policy Course, 9-13 Jul 2001 Lecturer and Student, The NATO School – Supreme Headquarters Allied Powers Europe

Joint Nuclear Operations and Targeting Course, 12-16 Jun 2000 Student, Defense Nuclear Weapons School
