Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Michele Schaal

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.

Like the Fukushima facility, they're located on the coast and vulnerable to a tsunami. Worse, the plants have spent fuel rods stored in pools of the same design as those that are now leaking radiation at Fukushima.

Please let me know how you intend to address this issue.

Sincerely,

Dorothyanne Silver

Dear Chairman Gregory Jaczko,

The earthquake and tsunami in Japan -- and subsequent meltdown at the Fukushima nuclear facility -- are a worrying reminder of the threat posed by all nuclear power plants, particularly by the aging fleet of reactors in the U.S.

Two prime examples: the Diablo Canyon and San Onofre nuclear plants in California.

I'm writing to demand that you run immediate inspections at these plants to address the risks to our health and environment.

As you know, both Diablo Canyon and San Onofre sit on top of major fault lines and both pose a grave danger in the event of a serious earthquake. Both are more than 25 years old and neither was built to withstand a temblor over magnitude 7.5.
