Subject: RE: SOARCA Weekly Team Meeting

Below is what is in the MACCS models we are using.

For Peach Bottom, people return home when the annual dose is less than 0.5 rem.
For Surry, people return home when the dose over 5 years is less than 4 rem. 4 rem corresponds to 2 rem in the first year and 0.5 rem in each of the next 4 years (1x2rem + 4x0.5rem = 4 rem).

These assumptions are site-specific for Peach Bottom and Surry and are intended to be best-estimate, as opposed to conservative or non-conservative.

Randy Sullivan (NSIR) has the lead for the EP-related aspects of the SOARCA study.
