Ladies/Gentlemen:

Docket 50-305
Operating License DPR-43
Kewaunee Nuclear Power Plant
Reportable Occurrence 95-007-00

In accordance with the requirements of 10 CFR 50.73, "Licensee Event Report System," the attached Licensee Event Report (LER) for reportable occurrence 95-007-00 is being submitted. This submittal has been delayed as discussed with NRC Region III management.

WPSC recognizes that part of the significance of this event is that some of the resultant actions taken could have affected redundant safety related equipment. As a result, work control practices are being reviewed to identify changes which will reduce the likelihood of future events of this type. This event identified that additional management attention is needed in the way work is being prioritized, scheduled, performed and documented. The small oil level fluctuations described in this licensee event report appeared to be insignificant, but the lack of a resolution allowed the condition to linger, eventually allowing the conditions which created this event. Additionally, work control measures, including work requests and procedural guidance, need to be addressed to improve performance, retest, and documentation of work.

As noted in the LER, a supplemental report will be submitted. This will occur following the completion of our investigation of this event and long term corrective actions to resolve the auxiliary feedwater pump lubricating oil level fluctuations.

Sincerely,

M L Marchi
