Ladies/Gentlemen:

Docket 50-305
Operating License DPR-43
Kewaunee Nuclear Power Plant
WCAP to Support Proposed Amendment 142 to the KNPP
Technical Specifications: F*/EF* Alternate Repair Criteria

On July 3, 1996, Wisconsin Public Service Corporation (WPSC) submitted a Technical Specification (TS) amendment request to revise the acceptance criteria for indications of tube degradation occurring in the tubesheet crevice region of the Kewaunee Nuclear Power Plant (KNPP) steam generators (SGs). When submitted, the qualification of the additional roll expansion was documented in Westinghouse Report SG-96-06-017, "Qualification of Additional Roll Expansion for the Kewaunee Nuclear Power Plant Steam Generators" (proprietary). This report has been republished in WCAP format. A proprietary and non-proprietary version of WCAP-14679, and the accompanying affidavit statement, are included in the attachment of this letter.

The previously submitted no significant hazards determination and proposed TS remain unchanged; the only change is the titling of the report. In accordance with the requirements of 10 CFR 50.36 (b), this submittal has been signed and notarized. A copy of this submittal has been transmitted to the State of Wisconsin as required by 10 CFR 50.91 (b) (1). Please call a member of my staff if you have any questions or require additional information.

Sincerely,

C. R. Steinhardt
