Map Unit Name  
(Series and Phase): 21 Genawee Silty Clay Loam

Drainage Class: Poorly Drained  
Field Observations  
Confirm Mapped Type? ☒ Yes ☐ No

Taxonomy (Subgroup): \_\_\_\_\_

## Profile Description:

Depth (inches)	Horizon	Matrix Color (Munsell Moist)	Mottle Colors (Munsell Moist)	Mottle Abundance/Contrast	Texture, Concretions, Structure, etc.
0-1	O				silt loam
1-12	A	10YR 2/1			silt loam

## Hydric Soil Indicators:

- ☐ Histosol
- ☐ Histic Epipedon
- ☐ Sulfidic Odor
- ☐ Aquic Moisture Regime
- ☐ Reducing Conditions
- ☒ Gleyed or Low-Chroma Colors

- ☐ Concretions
- ☐ High Organic Content in Surface Layer Sandy Soils
- ☐ Organic Streaking in Sandy Soils
- ☒ Listed on Local Hydric Soils List
- ☐ Listed on National Hydric Soils List
- ☐ Other (Explain in Remarks)

Remarks:

## WETLAND DETERMINATION

Map Unit Name  
(Series and Phase): 21 - Lenawee Silty Clay Loam

Drainage Class: Poorly Drained  
Field Observations  
Confirm Mapped Type? ☒ Yes ☐ No

Taxonomy (Subgroup): \_\_\_\_\_

## Profile Description:

Depth (inches)	Horizon	Matrix Color (Munsell Moist)	Mottle Colors (Munsell Moist)	Mottle Abundance/Contrast	Texture, Concretions, Structure, etc.
0-1	O	-	-	-	-
1-8	A	10YR 4/2	10YR 5/6	Common / Prominent	Silty Clay Loam
8-15	B	10YR 5/3	10YR 5/8	Many / Prominent	Silty clay Loam

## Hydric Soil Indicators:

- ☐ Histosol
- ☐ Histic Epipedon
- ☐ Sulfidic Odor
- ☐ Aquic Moisture Regime
- ☐ Reducing Conditions
- ☒ Gleyed or Low-Chroma Colors

- ☐ Concretions
- ☐ High Organic Content in Surface Layer Sandy Soils
- ☐ Organic Streaking in Sandy Soils
- ☒ Listed on Local Hydric Soils List
- ☐ Listed on National Hydric Soils List
- ☐ Other (Explain in Remarks)

Remarks:

## Hydric Soil Indicators:

- ☐ Histosol
- ☐ Histic Epipedon
- ☐ Sulfidic Odor
- ☐ Aquic Moisture Regime
- ☐ Reducing Conditions
- ☒ Gleyed or Low-Chroma Colors

- ☐ Concretions
- ☐ High Organic Content in Surface Layer Sandy Soils
- ☐ Organic Streaking in Sandy Soils
- ☒ Listed on Local Hydric Soils List
- ☐ Listed on National Hydric Soils List
- ☐ Other (Explain in Remarks)

Remarks:

## WETLAND DETERMINATION

Hydrophytic Vegetation Present? ☒ Yes ☐ No (Circle)  
Wetland Hydrology Present? ☒ Yes ☐ No  
Hydric Soils Present? ☒ Yes ☐ No

(Circle)  
Is this Sampling Point Within a Wetland? ☒ Yes ☐ No

# **APPENDIX C**

## **FUNCTIONS/VALUES ASSESSMENT FORMS**

## Wetland Evaluation Supporting Documentation:

Listed below are the thirteen functions and values typically considered by the U.S. Army Corps of Engineers Regulatory Branch for Section 404 wetland permits. The Considerations and Qualifiers associated with each function and value were found in The Highway Methodology Workbook Supplement: Wetland Functions and Values: *A Descriptive Approach* and originally used for a New Hampshire highway project. The published considerations are flexible, based on best professional judgment and interdisciplinary team consensus and provide a comprehensive base for use in other projects.

### Groundwater Recharge/Discharge:

This function considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. Recharge should relate to the potential for the wetland to contribute water to an aquifer. Discharge should relate to the potential for the wetland to serve as an area where groundwater can be discharged to the surface. It refers to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.

#### CONSIDERATIONS/QUALIFIERS

1. Public or private wells occur downstream of the wetland.
2. Potential exists for public or private wells downstream of the wetland.
3. Wetland is underlain by stratified drift.
4. Gravel or sandy soils present in or adjacent to the wetland.
5. Fragipan does not occur in the wetland.
6. Fragipan, impervious soils, or bedrock does occur in the wetland.
7. Wetland is associated with a perennial or intermittent watercourse.
8. Signs of groundwater recharge are present or piezometer data demonstrates recharge.
9. Wetland is associated with a watercourse but lacks a defined outlet or contains a constricted outlet.
10. Wetland contains only an outlet, no inlet.
11. Groundwater quality of stratified drift aquifer within or downstream of wetland meets drinking water standards.
12. Quality of water associated with the wetland is high.
13. Signs of groundwater discharge are present (e.g., springs).
14. Water temperature suggests it is a discharge site.
15. Wetland shows signs of variable water levels.
16. Piezometer data demonstrates discharge.
17. Other

### Floodflow Alteration (Storage and Desynchronization):

This function considers the effectiveness of the wetland in reducing flood damage by attenuation of floodwaters for prolonged periods following precipitation events and the gradual release of floodwaters. It adds to the stability of the wetland ecological system or its buffering characteristics and provides social or economic value relative to erosion and/or flood prone areas.

#### CONSIDERATIONS/QUALIFIERS

1. Area of this wetland is large relative to its watershed.
2. Wetland occurs in the upper portions of its watershed.
3. Effective flood storage is small or non-existent upslope of or above the wetland.
4. Wetland watershed contains a high percent of impervious surfaces.
5. Wetland contains hydric soils which are able to absorb and detain water.
6. Wetland exists in a relatively flat area that has flood storage potential.
7. Wetland has an intermittent outlet, ponded water, or signs are present of variable water level.
8. During flood events, this wetland can retain higher volumes of water than under normal or average rainfall conditions.
9. Wetland receives and retains overland or sheet flow runoff from surrounding uplands.
10. In the event of a large storm, this wetland may receive and detain excessive flood water from a nearby watercourse.
11. Valuable properties, structures, or resources are located in or near the floodplain downstream from the wetland.
12. The watershed has a history of economic loss due to flooding.
13. This wetland is associated with one or more watercourses.
14. This wetland watercourse is sinuous or diffuse.
15. This wetland outlet is constricted.
16. Channel flow velocity is affected by this wetland.
17. Land uses downstream are protected by this wetland.
18. This wetland contains a high density of vegetation.
19. Other

#### Fish and Shellfish Habitat:

This function considers the effectiveness of seasonal or permanent waterbodies associated with the wetland in question for fish and shellfish habitat.

#### CONSIDERATIONS/QUALIFIERS

1. Forest land dominant in the watershed above this wetland.
  2. Abundance of cover objects present.
- STOP HERE IF THIS WETLAND IS NOT ASSOCIATED WITH A WATERCOURSE***
3. Size of this wetland is able to support large fish/shellfish populations.
  4. Wetland is part of a larger, contiguous watercourse.
  5. Wetland has sufficient size and depth in open water areas so as not to freeze solid and retain some open water during winter.
  6. Stream width (bank to bank) is more than 50 feet.
  7. Quality of the watercourse associated with this wetland is able to support healthy fish/shellfish populations.
  8. Streamside vegetation provides shade for the watercourse.
  9. Spawning areas are present (submerged vegetation or gravel beds).
  10. Food is available to fish/shellfish populations within this wetland.
  11. Barrier(s) to anadromous fish (such as dams, including beaver dams, waterfalls, road crossing) are absent from the stream reach associated with this wetland.
  12. Evidence of fish is present.
  13. Wetland is stocked with fish.
  14. The watercourse is persistent.
  15. Man-made streams are absent.

16. Water velocities are not too excessive for fish usage.
17. Defined stream channel is present.
18. Other

### **Sediment/Toxicant/Pathogen Retention:**

This function reduces or prevents degradation of water quality. It relates to the effectiveness of the wetland as a trap for sediments, toxicants, or pathogens in runoff water from surrounding uplands or upstream eroding wetland areas.

#### **CONSIDERATIONS/QUALIFIERS**

1. Potential sources of excess sediment are in the watershed above the wetland.
2. Potential or known sources of toxicants are in the watershed above the wetland.
3. Opportunity for sediment trapping by slow moving water or deepwater habitat are present in this wetland.
4. Fine grained mineral or organic soils are present.
5. Long duration water retention time is present in this wetland.
6. Public or private water sources occur downstream.
7. The wetland edge is broad and intermittently aerobic.
8. The wetland is known to have existed for more than 50 years.
9. Drainage ditches have not been constructed in the wetland.

#### ***STOP HERE IF WETLAND IS NOT ASSOCIATED WITH A WATERCOURSE.***

10. Wetland is associated with an intermittent or perennial stream or a lake.
11. Channelized flows have visible velocity decreases in the wetland.
12. Effective floodwater storage in wetland is occurring. Areas of impounded open water are present.
13. No indicators of erosive forces are present. No high water velocities are present.
14. Diffuse water flows are present in the wetland.
15. Wetland has a high degree of water and vegetation interspersion.
16. Dense vegetation provides opportunity for sediment trapping and/or signs of sediment accumulation by dense vegetation is present.
17. Other

### **Nutrient Removal/Retention/Transformation:**

This function relates to the effectiveness of the wetland to prevent adverse effects of excess nutrients entering aquifers or surface waters such as ponds, lakes, streams, rivers, or estuaries. This function considers the effectiveness of the wetland as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. One aspect of this function is to prevent ill effects of nutrients entering aquifers or surface waters such as ponds, lakes, streams, rivers, or estuaries.

#### **CONSIDERATIONS/QUALIFIERS**

1. Wetland is large relative to the size of its watershed.
2. Deep water or open water habitat exists.
3. Overall potential for sediment trapping exists in the wetland.
4. Potential sources of excess nutrients are present in the watershed above the wetland.
5. Wetland saturated for most of the season. Ponded water is present in the wetland.

6. Deep organic/sediment deposits are present.
7. Slowly drained fine grained mineral or organic soils are present.
8. Dense vegetation is present.
9. Emergent vegetation and/or dense woody stems are dominant.
10. Opportunity for nutrient attenuation exists.
11. Vegetation diversity/abundance sufficient to utilize nutrients.
- STOP HERE IF WETLAND IS NOT ASSOCIATED WITH A WATERCOURSE.***
12. Waterflow through this wetland is diffuse.
13. Water retention/detention time in this wetland is increased by constricted outlet or thick vegetation.
14. Water moves slowly through this wetland.
15. Other

### **Production Export (Nutrient):**

This function relates to the effectiveness of the wetland to produce food or usable products for humans or other living organisms.

#### **CONSIDERATIONS/QUALIFIERS**

1. Wildlife food sources grow within this wetland.
2. Detritus development is present within this wetland
3. Economically or commercially used products found in this wetland.
4. Evidence of wildlife use found within this wetland.
5. Higher trophic level consumers are utilizing this wetland.
6. Fish or shellfish develop or occur in this wetland.
7. High vegetation density is present.
8. Wetland exhibits high degree of plant community structure/species diversity.
9. High aquatic vegetative diversity/abundance is present.
10. Nutrients exported in wetland watercourses (permanent outlet present).
11. "Flushing" of relatively large amounts of organic plant material occurs from this wetland.
12. Wetland contains flowering plants that are used by nectar-gathering insects.
13. Indications of export are present.
14. High production levels occurring, however, no visible signs of export (assumes export is attenuated).
15. Other

### **Sediment/Shoreline Stabilization:**

This function relates to the effectiveness of a wetland to stabilize streambanks and shorelines against erosion.

#### **CONSIDERATIONS/QUALIFIERS**

1. Indications of erosion or siltation are present.
2. Topographical gradient is present in wetland.
3. Potential sediment sources are present up-slope.
4. Potential sediment sources are present upstream.
5. No distinct shoreline or bank is evident between the waterbody and the wetland or upland.

6. A distinct step between the open waterbody or stream and the adjacent land exists (i.e., sharp bank) with dense roots throughout.
7. Wide wetland (>10') borders watercourse, lake, or pond.
8. High flow velocities in the wetland.
9. The watershed is of sufficient size to produce channelized flow.
10. Open water fetch is present.
11. Boating activity is present.
12. Dense vegetation is bordering watercourse, lake, or pond.
13. High percentage of energy-absorbing emergents and/or shrubs border a watercourse, lake, or pond.
14. Vegetation is comprised of large trees and shrubs that withstand major flood events or erosive incidents and stabilize the shoreline on a large scale (feet).
15. Vegetation is comprised of a dense resilient herbaceous layer that stabilizes sediments and the shoreline on a small scale (inches) during minor flood events or potentially erosive events.
16. Other

### **Wildlife Habitat:**

This function considers the effectiveness of the wetland to provide habitat for various types and populations of animals typically associated with wetlands and the wetland edge. Both resident and/or migrating species must be considered. Species lists of observed and potential animals should be included in the wetland assessment report.

### **CONSIDERATIONS/QUALIFIERS**

1. Wetland is not degraded by human activity.
2. Water quality of the watercourse, pond, or lake associated with this wetland meets or exceeds Class A or B standards.
3. Wetland is not fragmented by development.
4. Upland surrounding this wetland is undeveloped.
5. More than 40% of this wetland edge is bordered by upland wildlife habitat (e.g., brushland, woodland, active farmland, or idle land) at least 500 feet in width.
6. Wetland is contiguous with other wetland systems connected by a watercourse or lake.
7. Wildlife overland access to other wetlands is present.
8. Wildlife food sources are within this wetland or are nearby.
9. Wetland exhibits a high degree of interspersed vegetation classes and/or open water.
10. Two or more islands or inclusions of upland within the wetland are present.
11. Dominant wetland class includes deep or shallow marsh or wooded swamp.
12. More than three acres of shallow permanent open water (less than 6.6 feet deep), including streams in or adjacent to wetland, are present.
13. Density of the wetland vegetation is high.
14. Wetland exhibits a high degree of plant species diversity.
15. Wetland exhibits a high degree of diversity in plant community structure (e.g., tree/shrub/vine/grasses/mosses)
16. Plant/animal indicator species are present. (List species for project)
17. Animal signs observed (tracks, scats, nesting areas, etc.)
18. Seasonal uses vary for wildlife and wetland appears to support varied population diversity/abundance during different seasons.
19. Wetland contains or has potential to contain a high population of insects.
20. Wetland contains or has potential to contain large amphibian populations.

21. Wetland has a high avian utilization or its potential.
22. Indications of less disturbance-tolerant species are present.
23. Signs of wildlife habitat enhancement are present (birdhouses, nesting boxes, food sources, etc.).
24. Other

## **Recreation (Consumptive and Non-Consumptive):**

This value considers the effectiveness of the wetland and associated water-courses to provide recreational opportunities such as canoeing, boating, fishing, hunting, and other active or passive recreational activities. Consumptive activities consume or diminish the plants, animals, or other resources that are intrinsic to the wetland, whereas non-consumptive activities do not.

### **CONSIDERATIONS/QUALIFIERS**

1. Wetland is part of a recreation area, park, forest, or refuge.
2. Fishing is available within or from the wetland.
3. Hunting is permitted in the wetland.
4. Hiking occurs or has potential to occur within the wetland.
5. Wetland is a valuable wildlife habitat.
6. The watercourse, pond, or lake associated with the wetland is unpolluted.
7. High visual/aesthetic quality of this potential recreation site.
8. Access to water is available at this potential recreation site for boating, canoeing, or fishing.
9. The watercourse associated with this wetland is wide and deep enough to accommodate canoeing and/or non-powered boating.
10. Off-road public parking available at the potential recreation site.
11. Accessibility and travel ease is present at this site.
12. The wetland is within a short drive or safe walk from highly populated public and private areas.
13. Other

## **Educational/Scientific Value:**

This value considers the effectiveness of the wetland as a site for an “outdoor classroom” or as a location for scientific study or research.

### **CONSIDERATIONS/QUALIFIERS**

1. Wetland contains or is known to contain threatened, rare, or endangered species.
2. Little or no disturbance is occurring in this wetland.
3. Potential educational site contains a diversity of wetland classes which are accessible or potentially accessible.
4. Potential educational site is undisturbed and natural.
5. Wetland is considered to be a valuable wildlife habitat.
6. Wetland is located within a nature preserve or wildlife management area.
7. Signs of wildlife habitat enhancement present (bird houses, nesting boxes, food sources, etc.).
8. Off-road parking at potential educational site suitable for school bus access in or near wetland.
9. Potential educational site is within safe walking distance or a short drive to schools.
10. Potential educational site is within safe walking distance to other plant communities.
11. Direct access to perennial stream at potential educational site is available.

12. Direct access to pond or lake at potential educational site is available.
13. No known safety hazards exist within the potential educational site.
14. Public access to the potential educational site is controlled.
15. Handicap accessibility is available.
16. Site is currently used for educational or scientific purposes.
17. Other

### **Uniqueness/Heritage:**

This value relates to the effectiveness of the wetland or its associated waterbodies to produce certain special values. Special values may include such things as archaeological sites, unusual aesthetic quality, historical events, relative importance of wetland class geographically, or unique plants, animals, or geologic features.

### **CONSIDERATIONS/QUALIFIERS**

1. Upland surrounding wetland is primarily urban.
2. Upland surrounding wetland is developing rapidly.
3. More than 3 acres of shallow permanent open water (less than 6.6 feet deep), including streams, occur in wetlands.
4. Three or more wetland classes are present.
5. Deep and/or shallow marsh or wooded swamp dominate.
6. High degree of interspersed vegetation and/or open water occur in this wetland.
7. Well-vegetated stream corridor (15 feet on each side of the stream) occurs in this wetland.
8. Potential educational site is within a short drive or a safe walk from schools.
9. Off-road parking at potential educational site is suitable for school buses.
10. No known safety hazards exist within this potential educational site.
11. Direct access to perennial stream or lake exists at potential educational site.
12. Two or more wetland classes are visible from primary viewing locations.
13. Low-growing wetlands (marshes, scrub-shrub, bogs, open water) are visible from primary viewing locations.
14. Half an acre of open water or 200 feet of stream is visible from the primary viewing locations.
15. Large area of wetland is dominated by flowering plants or plants that turn vibrant colors in different seasons.
16. General appearance of the wetland visible from primary viewing locations is unpolluted and/or undisturbed.
17. Overall view of the wetland is available from the surrounding upland.
18. Quality of the water associated with the wetland is high.
19. Opportunities for wildlife observations are available.
20. Historical buildings are found within the wetland.
21. Presence of pond or pond site and remains of a dam occur within the wetland.
22. Wetland is within 50 yards of the nearest perennial watercourse.
23. Visible stone or earthen foundations, berms, dams, standing structures, or associated features occur within the wetland.
24. Wetland contains critical habitat for a state- or federally-listed threatened or endangered species.
25. Wetland is known to be a study site for scientific research.
26. Wetland is a natural landmark or recognized by the state natural heritage inventory authority as an exemplary natural community.
27. Wetland has local significance because it serves several functional values.

28. Wetland has local significance because it has biological, geological, or other features that are locally rare or unique.
29. Wetland is known to contain an important archaeological site.
30. Wetland is hydrologically connected to a state or federally designated scenic river.
31. Wetland is located in an area experiencing a high wetland loss rate.
32. Other

### **Visual Quality/Aesthetics:**

This value relates to the visual and aesthetic qualities of the wetland.

#### **CONSIDERATIONS/QUALIFIERS**

1. Multiple wetland classes are visible from primary viewing locations.
2. Emergent marsh and/or open water are visible from primary viewing locations.
3. A diversity of vegetative species is visible from primary viewing locations.
4. Wetland is dominated by flowering plants or plants that turn vibrant colors in different seasons.
5. Land use surrounding the wetland is undeveloped as seen from primary viewing locations.
6. Visible surrounding land use form contrasts with wetland.
7. Wetland views absent of trash, debris, and signs of disturbance.
8. Wetland is considered to be a valuable wildlife habitat.
9. Wetland is easily accessed.
10. Low noise level at primary viewing locations.
11. Unpleasant odors absent at primary viewing locations.
12. Relatively unobstructed sight line exists through wetland.
13. Other

### **ES Threatened or Endangered Species Habitat:**

This value considers the suitability of the wetland to support threatened or endangered species.

#### **CONSIDERATIONS/QUALIFIERS**

1. Wetland contains or is known to contain threatened or endangered species.
2. Wetland contains critical habitat for a state or federally listed threatened or endangered species.

# Wetland Function-Value Evaluation Form

# **APPENDIX E**

## **QUALIFICATIONS**

## **Investigative Staff Qualifications**

On-site wetland delineations and data inventories were performed by the following DU staff:

### Sheila Hess, Regional Biologist/Mitigation Specialist

Ms. Hess is responsible for the coordination and delivery of wetland mitigation strategy. She has experience with regulations that apply to compensatory wetland mitigation and with the protection, restoration, creation and evaluation of diverse wetland types and coordinates all aspects of mitigation projects including contract development, site identification, wetland delineation, land protection, survey, wetland design, construction management and monitoring and evaluation. Ms. Hess works with a team of biologists and engineers to develop creative, high-quality mitigation strategies that result in the successful replacement of wetlands functions.

### Peter Wyckoff, Engineer

Mr. Wyckoff delivers conservation services throughout the Great Lakes region, including conducting topographic surveys of possible restoration sites, performing engineering design requirements for wetland restoration projects, computer-aided drafting, construction management, and wetland delineation. Mr. Wyckoff's technical skills include GPS surveys, AutoDesk Land Desktop, HydroCAD modeling, hydraulic engineering design and engineering design of aquaponics systems. Mr. Wyckoff has completed a Wetland Delineation short course.

### Gregg Bachman, Senior Engineering Specialist

Mr. Bachman is in charge of topographic surveying and construction staking for wetland restoration projects. He is involved with the pre-survey planning, data collection and development of the final topographic survey drawings. Mr. Bachman provides horizontal and vertical control for topographic mapping and project construction, utilizing GPS equipment and conventional survey equipment. Mr. Bachman develops stakeout plans from the engineer's plans to provide staking in the field for construction of the wetland restoration project. Mr. Bachman is also involved in all aspects of the engineering department regarding the delivery of wetland restoration projects, including bid preparation, construction plan review, on-site construction inspection and construction management.

### Jade Phillips, Engineering Technician

Mr. Phillips is involved with the engineering department delivering conservation services throughout the Mid-Atlantic region by surveying wetland restoration sites, on-site construction inspection and construction management. Mr. Phillips brings with him 11 years experience as an engineering technician with the Maryland Department of Agriculture. While with the Department of Agriculture he was responsible for the survey, design, layout and construction management of projects beneficial to agriculture and wildlife.

### Warren Weirich, Manager of Conservation Programs

Mr. Weirich oversees multiple aspects of regional or national conservation service functions, such as project coordination, engineering, information systems, budgets, contract compliance and new product design. Mr. Weirich also supervises engineering staff associated with project delivery.

Nina Hill, Conservation Specialist

Ms. Hill works closely with the Regional Biologists of the Great Lakes Management Unit in the initiation and delivery of habitat conservation projects. She responds to requests from across the five state region, including technical assistance, land protection, local policy issues, and research on waterfowl issues. She conducts initial consultation and site evaluation for private lands restoration projects, and communicates project viability with various partner organizations. Through DU's partnership in Lake Erie CREP, Ms. Hill coordinates outreach efforts and assists private landowners through enrollment in this cost-share program. Ms. Hill's experience includes a variety of wildlife research projects examining habitat selection and factors influencing breeding success of waterbird, fish and amphibian species.

Kirk Mantay, Regional Biologist

Mr. Mantay is responsible for delivery of wetland conservation projects in multiple states in the Great Lakes Atlantic Region. He has conducted plant and/or wildlife inventories and endangered species studies, and has designed and implemented habitat restorations throughout the Mid-Atlantic region. His habitat design and construction experience ranges from submerged aquatic vegetation bed restoration to diamondback terrapin nesting habitat restoration, to transitional grassland management for waterfowl nesting.

JENNIFER M. GRANHOLM  
GOVERNOR

STATE OF MICHIGAN  
DEPARTMENT OF ENVIRONMENTAL QUALITY  
JACKSON DISTRICT OFFICE

STEVEN E. CHESTER  
DIRECTOR

November 7, 2008

Mr. Randall Westmoreland  
The Detroit Edison Company  
One Energy Plaza  
Detroit, Michigan 48226-1279

Dear Mr. Westmoreland:

SUBJECT: Wetland Identification Report  
Wetland Identification File Number: 08-58-0003-WA

The Department of Environmental Quality (DEQ) conducted a Level 3 Wetland Identification Review of 1,106 acres on property located in Town 06S, Range 10E, Sections 16, 17, 20, 21, 28, and 29, Frenchtown Township, Monroe County on October 14, 15, and 16, 2008. The wetland review was conducted in accordance with Part 303, Wetland Protection of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA); and Rule 4 (1), Wetland Identification and Assessment (R 281.924) of the Administrative Rules for Part 303. This is a report of our findings in response to your Wetland Identification Application.

The DEQ staff walked the flagged boundaries as requested in your wetland identification application. Based on our on-site review, which included review of plant communities, hydrologic indicators, and soils and an in-office review of other pertinent information, the DEQ confirms, in part, the wetland boundaries observed during the site inspection. Staff noted a few areas of disagreement with your consultant's boundaries.

Changes made to your consultant's boundaries include:

Wetland I

- connect flag I34 to flag I42
- connect flag I43 to flag I47

Wetland L

- connect flag L69 to flag L74

Wetland M and T

- connect flag M174 to flag T5
- leave berm out of wetland area

New Wetlands WW, XX, YY, and ZZ

- these four wetland areas shown on the map are located adjacent to the gravel pit lakes
- these wetlands were not flagged in the field, their locations are approximate

We documented the new boundaries on the enclosed site maps. The site maps of the review area were created by combining information from your consultant and the DEQ. The new maps identify the areas containing wetland and the non-wetland (upland). A new delineation is not necessary.

For those areas identified as regulated wetland on the site map; specifically Wetlands B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z, AA, BB, CC/DD, EE, FF, GG, HH, II, JJ, KK, WW, XX, YY, and ZZ; please be advised that any of the following activities require a permit under Part 303:

- a) Deposit or permit the placing of fill material in a regulated wetland.
- b) Dredge, remove, or permit the removal of soil or minerals from regulated wetland.
- c) Construct, operate, or maintain any use or development in a regulated wetland.
- d) Drain surface water from a regulated wetland.

For those areas identified as non-wetland (upland) and non-regulated wetland on the site map, the DEQ lacks jurisdiction under Part 303 for activities occurring in those areas. The non-regulated wetland, Wetland A, is not regulated since it is not contiguous to the Great Lakes, an inland lake or pond, or a river or stream.

You may request the DEQ reassess the subject review area, or any portion of the review area, should you disagree with the findings, within 60 days of the date of this report. A written request to reassess the Wetland Identification Review area must be accompanied by supporting evidence with regard to wetland vegetation, soils or hydrology different from, or in addition to, the information relied upon by DEQ staff in preparing this report. The request should be submitted to:

Wetland Identification Program  
Land and Water Management Division  
Department of Environmental Quality  
P.O. Box 30458  
Lansing, Michigan 48909-7756

Please be aware that this identification report does not constitute a determination of the presence of wetland that may be regulated under local ordinances or federal law. The U.S. Army Corps of Engineers (USACE) retains regulatory authority over certain wetlands pursuant to Section 404 of the Clean Water Act (CWA), and specifically those wetlands associated with traditionally navigable waters of the state. Navigable waters are generally the Great Lakes, their connecting waters, and river systems and lakes connected to these waters. In other areas of the state, the DEQ is responsible for identification of wetland boundaries for purposes of compliance with the CWA under an agreement with the U.S. Environmental Protection Agency.

Our review indicates your wetland identification area may be within those areas regulated by the USACE. Many activities within these areas may also require a federal review and/or a permit. Additional information may be obtained by contacting the USACE at 313-226-2218.

It should be noted that three State Threatened species were observed within the review area. Eastern fox snake (*Elaphe gloydi*) and bald eagle (*Haliaeetus leucocephalus*) were observed by individuals with Ducks Unlimited per their submitted wetland investigation report. American lotus (*Nelumbo lutea*) was observed in wetland CC & DD by DEQ staff during the site inspection on October 15, 2008. For more information concerning these species, please contact:

Ms. Lori Sargent  
Department of Natural Resources, Wildlife Division  
Email (preferred): SargentL@michigan.gov  
Phone: 517-373-9418

This Wetland Identification Report is limited to findings pursuant to Part 303 and does not constitute a determination of jurisdiction under other DEQ administered programs. Any land use activities undertaken on the assessed parcel may be subject to regulation pursuant to the NREPA under the following programs:

Floodplain Regulatory Authority found in Part 31, Water Resources Protection  
Part 91, Soil Erosion and Sedimentation Control  
Part 301, Inland Lakes and Streams  
Part 323, Shorelands Protection and Management  
Part 325, Great Lakes Submerged Lands

The findings contained in this report are binding on the DEQ until October 16, 2011; a period of three years from the date of the site inspection; unless a reassessment is conducted. Please contact me if you have any questions regarding this report.

Sincerely,

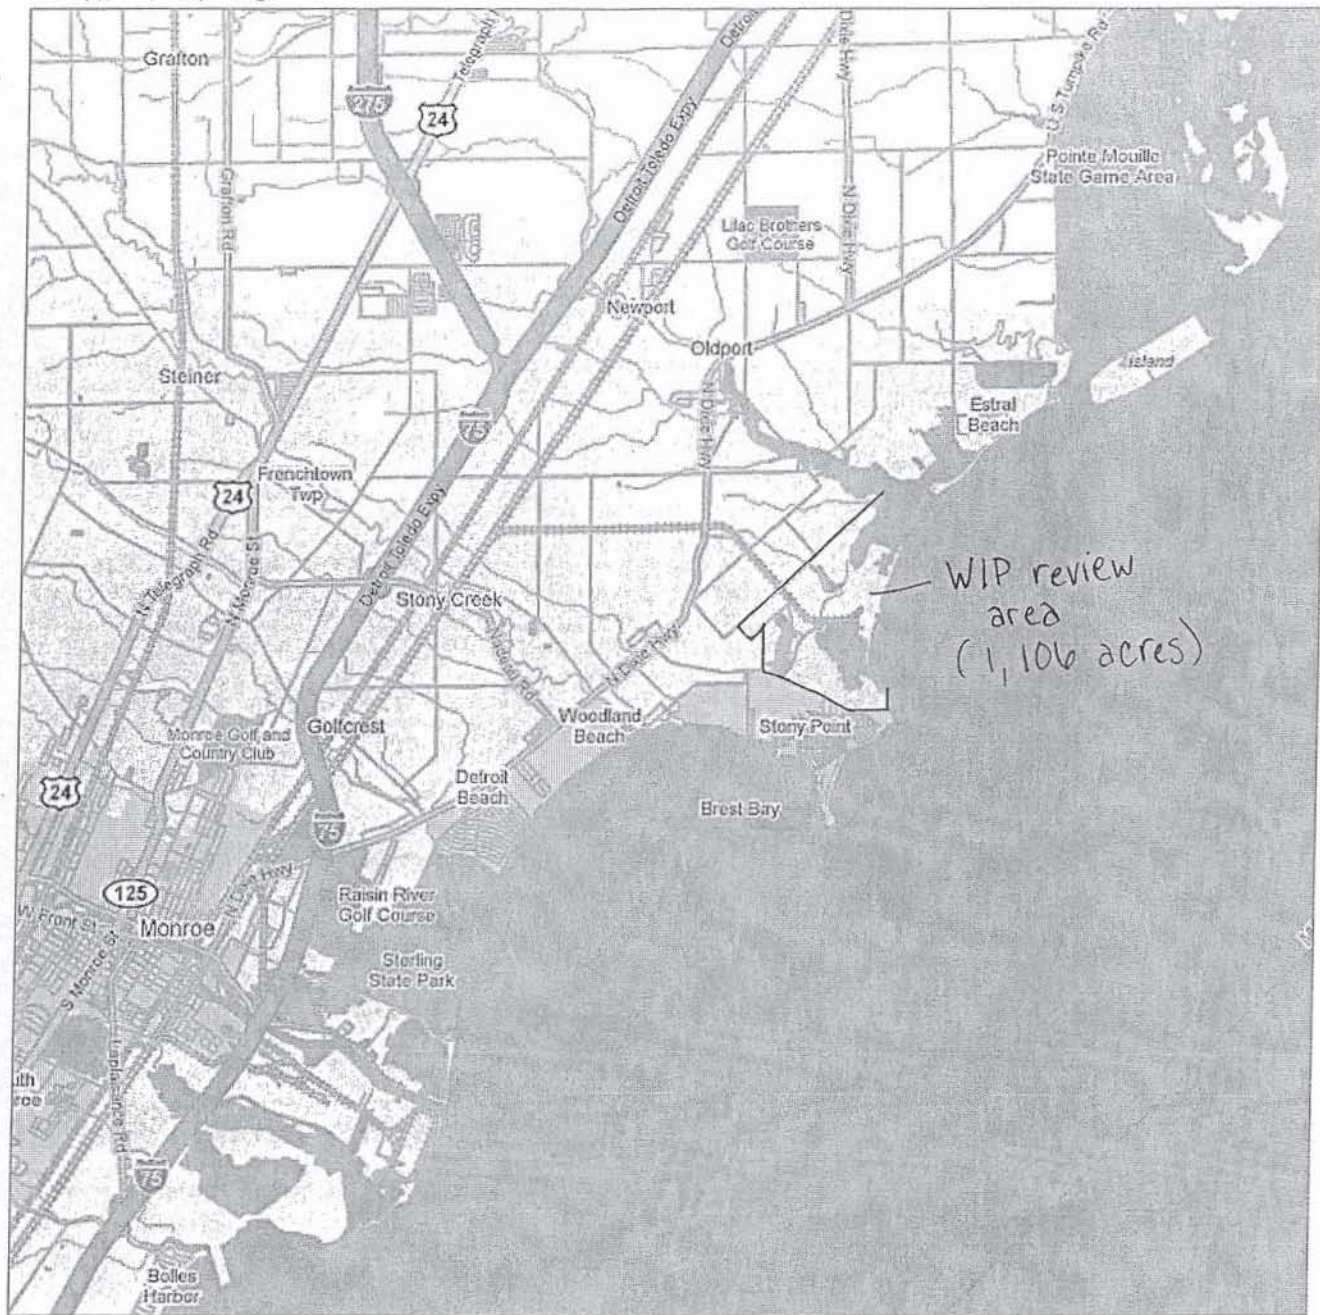

Mary Vanderlaan  
Jackson District Supervisor  
Land and Water Management Division  
517-780-7915

STEVEN E. CHESTER  
DIRECTOR

March 30, 2009

Mr. Randall Westmoreland  
The Detroit Edison Company  
One Energy Plaza  
Detroit, MI 48226-1279

Dear Mr. Westmoreland:

SUBJECT: Wetland Identification Report  
Modified Wetland Identification File Number 08-58-0003-WA

The Department of Environmental Quality (DEQ) has been advised by your consultant, Mr. Peter Wyckoff of Ducks Unlimited, that the location of wetland YY was incorrectly represented on the map in our original report issued November 7, 2008. The enclosed map, provided by Ducks Unlimited, shows the correct location of wetland YY. Wetland YY is located to the west of the area indicated on the original map.

This modified Report clarifies the previous report. No changes have been made to the regulatory status of the wetlands on site. The warranty period for this reassessment remains as October 16, 2011.

If you should have any questions regarding this letter, please contact me.

Sincerely,

Todd Losee  
Wetland Identification Program Coordinator  
Land and Water Management Division  
517-335-3457

Randy Westmoreland  
Detroit Edison Company  
2000 Second Avenue, 337 WCB  
Detroit, 48226

Dear Mr. Westmoreland:

This is in response to our ongoing discussions regarding U.S. Army Corps of Engineers (USACE) jurisdiction at the Detroit Edison (DTE) Fermi nuclear power plant property located at 6400 North Dixie Highway, Frenchtown Township, Monroe County, Michigan (Encl. 1). The whole of DTE's property at this site abuts Lake Erie which is a navigable water of the United States (US). Lake Erie and adjacent wetlands at this property are under USACE regulatory jurisdiction. Any temporary or permanent construction in Lake Erie or the discharge of dredged and/or fill material in Lake Erie or its adjacent wetlands at the property must be authorized by the USACE. Our authority to regulate certain activities on and adjacent to waters of the US, including those at the property in question is found in Section 10 of the Rivers and Harbors Act (Section 10), and Section 404 of the Clean Water Act (Section 404).

Ducks Unlimited (DU) submitted a Wetland Investigation Report for the property, dated July 14, 2008, and requested verification of the DU-identified wetland delineation lines as defined in the report and a USACE jurisdictional determination (JD) on behalf of DTE. This response contains a report of our findings and a final JD. The overall map of the DU wetland delineation is contained in Enclosure 2. The Enclosure 2 drawing, derived from the DU Report (Appendix A drawing 2 of 28, dated July 7, 2008) also contains approximate locations of four other wetland areas (WW, XX, YY, ZZ) not contained in the DU report but discussed at the initial inspection. Enclosure 3 contains DU Report Appendix A drawings 4-18 and 20-28 which include more detailed delineation maps and USACE changes to the delineation.

Under Section 10, a USACE permit is required for any temporary or permanent structure or work in navigable waters of the US to what is called the Ordinary High Water Mark (OHWM). In Lake Erie, the OHWM extends approximately to the elevation contour of 573.4 feet referenced to the 1985 International Great Lakes Datum (IGLD 85). In addition, a Section 10 permit is required for structures or work outside this limit if they may affect the course, location, or condition of the waterbody as to its navigable capacity. Some typical examples of structures or work requiring Section 10 permits within this jurisdictional area include beach nourishment, boat ramps, mooring buoys, navigational aids, piers, culverts, water intakes, discharge pipes, silt curtains, coffer dams, boat hoists, pilings and construction of marina facilities, breakwaters, bulkheads, dredging, filling or discharging material such as sand, gravel or stones, groins and jetties, placement of riprap for wave protection or stream bank stabilization.

Section 404 requires a USACE permit for the temporary or permanent discharge of dredged or fill material into navigable waters of the United States and in wetlands adjacent to those waters. The area of USACE jurisdiction under Section 404 extends to the OHWM and to the upland boundary of any adjacent wetlands. Projects involving discharges typically include placement of fill material for homes, landscaping, structures, impoundments, causeways, road fills, dams and dikes, riprap, groins, breakwaters, revetments, and beach nourishment. Section 404 also regulates discharges of dredged material incidental to certain activities such as grading, mechanized land clearing, ditching or other excavation activity, and the installation of certain pile-supported structures.

During our site inspections we determined that the ordinary high waters of Lake Erie extend into and encompassed the areas listed below and shown on the referenced drawings. We consider these areas to be part of Lake Erie and subject to our Section 10 and 404 jurisdiction:

Area	Enclosure	Enclosure 3 Drawing no.
C (unnamed stream)	2 & 3	5 & 6
M including 1.97-acre open water (south overflow canal)	2 & 3	6, 14 & 15
N (dredged material disposal authorized per LRE-1977-10060)	2 & 3	16
U	2 & 3	10
CC & DD including 3.55-acre open water area	2 & 3	24 & 25
Lake Erie proper	2	

During our site inspections we determined that the following non-wetland open water features identified by DU on DTE property are physically separated from the ordinary high waters of Lake Erie by patches of upland ground: H (Encl. 2 and Encl. 3, drawing 10), and the quarry lakes (Encl. 2). We do not have Section 10 or Section 404 jurisdiction over such water features. The State of Michigan has assumed Federal permit authority for such non-navigable/non-wetland waters per Section 404(g) of the Clean Water Act (CWA) and 40 Code of Federal Regulations (CFR), Part 233.

Regarding USACE Section 404 jurisdiction at the property, we determined, during our site inspections, that the following DU-identified wetland areas, identified on Enclosure 2, are not adjacent to Lake Erie: A, H, W, X, Y, II, JJ, WW, XX, YY, ZZ. The State of Michigan has assumed Federal permit authority for such non-adjacent wetlands per Section 404(g) of the CWA and 40 CFR, Part 233. In the event that the Environmental Protection Agency, per 40 CFR, Part 233.50, directs us to conduct a permit evaluation for discharges in any of the non-navigable/non-wetland waters or non-adjacent wetlands at the property, the Detroit District USACE will make the final determination on Section 404 jurisdiction.

We confirmed the DU wetland delineation boundaries observed during the site inspections for the areas listed below and on the referenced drawings, except as noted:

DU Wetland Delineation Area	Enclosure	Enclosure 3 Drawing no.
B	2 & 3	4
D	2 & 3	4
E	2 & 3	4
F	2 & 3	7 & 8
G	2 & 3	9
I	2 & 3	11
J	2 & 3	9
K	2 & 3	9
L with addition of area resulting from connection of WL 69 to WL 74	2 & 3	12 & 13
O	2 & 3	16
P	2 & 3	17
Q	2 & 3	15 & 17
R	2 & 3	15 & 18
S	2 & 3	18
T	2 & 3	17
V	2 & 3	9
Z	2 & 3	12 & 20
AA	2 & 3	13 & 21
BB	2 & 3	22 & 23
EE	2 & 3	23
FF	2 & 3	22
GG	2 & 3	26
HH	2 & 3	11 & 27
KK	2 & 3	6 & 28

Our assertion of jurisdiction is based on the following criteria: (1) our determination that portions of the property are navigable waters of the US and recognition that the use, degradation, or destruction of this waterbody could affect interstate commerce; (2) our findings that the areas identified as wetlands meet our technical definition of a wetlands per the criteria in the 1987 *Corps of Engineers Wetlands Delineation Manual* and (3) our determination that the wetlands considered under USACE jurisdiction in this letter are adjacent (bordering, contiguous, or neighboring) to Lake Erie which is a navigable water of the US.

This letter contains an approved JD for the referenced property (Encl. 4). If you object to this determination, you may request an administrative appeal under USACE regulations at 33 CFR, Part 331. We have enclosed a flowchart of our Administrative Appeal Process for Approved JD (Encl. 5) and a Notification of Appeal Process (NAP) fact sheet and Request For Appeal (RFA) form (Encl. 6). If you request to appeal this determination you must submit a completed RFA form to the USACE Great Lakes and Ohio River Division office at following address:

Appeals Review Officer  
U.S. Army Corps of Engineers  
Great Lakes and Ohio River Division  
550 Main Street, Rm 10-524  
Cincinnati, Ohio 45202-3222

In order for an RFA to be accepted by the USACE, the USACE must determine that the RFA is complete, that it meets the criteria for appeal under 33 CFR Part 331.5, and that it has been received by the Division office within 60 days of the date of the NAP sheet. If you decide to submit a RFA form, it must be received at the above address by January 9, 2011. It is not necessary to submit an RFA form to the Division office if you do not object to the determination in this letter. You may contact the Appeals Review Officer at (513) 684-6212 and send a facsimile at (513) 684-2460.

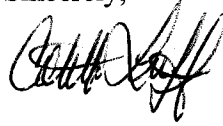

This JD is valid for a period of five years from the date of this letter unless new information warrants revision of the delineation before the expiration date.

If you have questions, please contact Colette Luff of this office at the above address, by telephone at 313-226-7485, or by E-Mail at [Colette.M.Luff@usace.army.mil](mailto:Colette.M.Luff@usace.army.mil). Please refer to File No. LRE-2008-00443-1 in all future communications with this office.

We are interested in your thoughts and opinions concerning your experience with the Detroit District, Corps of Engineers Regulatory Program. If you are interested in letting us know how we are doing, you can complete an electronic Customer Service Survey from our web site at: <http://per2.nwp.usace.army.mil/survey.html>. Alternatively, you may contact us and request a paper copy of the survey that you may complete and return to us by mail or fax. Thank you for taking the time to complete the survey, we appreciate your feedback.

Sincerely,

Colette Luff  
Project Manager  
Permit Evaluation Eastern Branch
