General Comment

I understand that our nation needs reliable power generated by nuclear plants. When a reasonable safety improvement is proposed, the NRC needs to carefully consider it. Petition PRM-50-96 would require backup safety systems for spent fuel pools at nuclear plants. I support the safety improvements proposed by PRM-50-96.

Events in Japan after the March 11 earthquake and tsunami have demonstrated the vulnerability of nuclear power plants to loss of power from the electric grid. A recent report by the Oak Ridge National Laboratory discloses a 1% annual probability of long-term and widespread electric grid failure due to natural disaster from solar flare activity. Over the standard 40 year license term of nuclear power plants, this equates to a 33% chance of long-term power loss, a risk far greater than most other natural disasters, including major earthquakes and tsunamis.

Van,

Attached for docketing is a comment from an anonymous individual on PRM-50-96 (76 FR 26223) that I received via the regulations.gov website on 7/11/11.

Thanks,
Carol
