General Comment

I urge you to put petition PRM-50-96 into force immediately. The solutions recommended after Fukushima are woefully inadequate. All plants must be able to survive without resupply of fuel. I see some recommendations that contracts be made with suppliers to bring in fuel in the event of long term power outage. This thinking is just plain Dumb! In a long term blackout fuel will be more precious than gold, any previous contract will be immediately open for "re-negotiation". Or local fuel suppliers will keep fuel for themselves. Or brigands will attack or rob the depot. When the lights go out what you have on site will be all you are going to get. Police will be busy quelling disturbance and the National Guard will be elsewhere. With communications down your plants will be the last thing on people's minds until the fuel pools boil off. Empty these pools now. Close down the GE MK1s, unless you can point to a emergency they haven't failed in? And fix plants in the south where the petition says the greatest danger is first.
