Subject: Docket ID NRC-2010-0131: Suspend the AP1000 approval

Dear Secretary Vietti-Cook,

DO NOT BUILD ANY MORE NUCLEAR REACTORS - PERIOD. EXCLAMATION POINT, ACTUALLY. HAVE AN IDEA FOR ONCE. HUMANS DON'T ACTUALLY NEED HALF THE ENERGY THEY USE. SAFE ALTERNATIVE ENERGIES ARE ALL AROUND US. IF SOME PEOPLE WOULD PULL THEIR HEADS OUT ONCE IN A WHILE THEY WOULD NOTICE THIS FACT AND NOT CONSIDER BUILDING MORE NUCLEAR REACTORS. HOW LAME IN THE BRAIN CAN YOU GET? LIFE IS NOT ALL ABOUT HUMANS AND MONEY, COMFORT AND CONVENIENCE, NOR CONTRACTS AND "PROGRESS". THINK ABOUT ALL THE INNOCENT LIFE ON EARTH IN THE FIRST PLACE. THINK OF ALL WHO WILL SUFFER WITHOUT MAKING A DOLLAR OR USING OR EVEN CARING ABOUT YOUR PRECIOUS ENERGY. USE SOME BRAIN ENERGY AND STOP THIS FOLLY BEFORE IT IS TOO LATE.

We cannot afford to take any unnecessary risks when building nuclear reactors. Because disaster can occur at any nuclear reactor, the NRC needs to ensure that it has taken all possible precautions before moving forward with the new Westinghouse AP1000 reactor design considered for construction in Georgia, South Carolina and other states.

Especially considering the ongoing crisis in Japan and the review which will take place when the situation is brought under control, the current 75-day public comment period on the reactor design is insufficient for the new AP1000 reactor. I request that the NRC put the license application on hold until a thorough review of the Japanese accident has been conducted and weaknesses in the AP1000 design have been reviewed in light of the accident. To stick with the grossly inadequate 75-day rulemaking comment period would be the height of irresponsibility by the NRC.

Please accept the petition filed by the twelve environmental organizations of the AP1000 Oversight Group to suspend rulemaking. To ensure transparency, please include this comment and all others in the formal review proceedings and post them in the NRC's online library so the public can see any expressed concerns.

Addressing safety concerns, not satisfying the industry, should be the Nuclear Regulatory Commission's primary concern. NRC engineer John S. Ma's non-concurrence with the review of the reactor raised the possibility that the AP1000's shield building could shatter "like a glass cup." It would be indefensible for the NRC to move forward without further addressing that weakness. Also, Westinghouse has not satisfactorily proved that the thin steel containment shell over the reactor would be effective during severe accidents or that the reactor could be properly cooled in conditions similar to those at Fukushima.
