Subject: Stop the AP1000 (Docket ID NRC-2010-0131)

Dear Secretary Vietti-Cook,

Disaster can occur at any nuclear reactor. Also security issues like, like dirty bombs, are real. The NRC should not license the Westinghouse AP1000 reactor design considered for construction in Georgia, South Carolina and other states.

NRC engineer John S. Ma's raised the possibility that the AP1000's shield building could shatter "like a glass cup." This weakness needs to be addressed. Also, Westinghouse has not satisfactorily proved that the thin steel containment shell over the reactor would be effective or that the reactor could be properly cooled in conditions similar to those at Fukushima.

The current 75-day public comment period on the reactor design is insufficient for the new AP1000 reactor. I request that the NRC put the license application on hold.

Consider the petition filed by the twelve environmental organizations of the AP1000 Oversight Group to suspend rulemaking. Include this comment and all others in the formal review proceedings and post them in the NRC's online library so the public can see any expressed concerns.
