Dear Meghan,

Attached, please find the monthly summary of marine turtle removals for July 2011. This month, we captured seventy-one (71) *Caretta caretta*, ten (10) *Chelonia mydas*, and one (1) *Eretmochelys imbricata* in the intake canal of the St. Lucie power plant on Hutchinson Island.

Two turtles were sent for rehabilitation during the month of July. On the 5th, a subadult loggerhead was dip-netted by IRG biologists near the temporary 5-inch barrier net. The turtle was severely underweight and lethargic (heart beat visible). It was transported to the Marinelife Center by IRG personnel, and subsequently died from complications related to its advanced state of degradation. On July 6th, a second turtle in similar condition was hand captured by the temporary barrier net. The animal was severely underweight and lethargic (heart beat visible), but in slightly better condition (higher body mass index). This turtle was also transported to the Marinelife Center by IRG personnel. The prognosis on this second loggerhead is good. After consultation with FWC, neither incident was considered to be causal to power plant operations.

Throughout the month, the 5" barrier net experienced negligible to moderate loads of algae that entered into the intake canal. Jellyfish entrainment was negligible to severe in magnitude. Consequently, IRG biologists have continued the increased monitoring of algae and jellyfish, as well as amplified hand capture effort to remove entrained turtles. Despite this heavy influx of debris, the temporary barrier has effectively kept turtles from moving further down the canal. A permanent fix to the primary net continues to remain in the design phase.

The tag numbers and morphometric data for all turtles are attached. Also included is a spreadsheet for all captures, mortalities, injuries, and causal events delineated by species and by month for 2011. This spreadsheet also tracks fresh scrapes incurred on captured turtles for the current month, as well as the entire year.

Please feel free to contact me with any questions.

Sincerely,

Steve

NOTES

1. DEAD (NON-CAUSAL MORTALITY). RECAPTURE from 3/31/10. Found moderately decomposed on barrier net. Missing head. Most likely entrained post-mortem. Held in freezer for FFWCC state necropsy workshops.
2. PAPILLOMAS (Tumor Score = 30). Turtle released same day as capture.
3. PAPILLOMAS (Tumor Score = 1). Tumor is undergoing regression, located on trailing edge of LFF. Turtle released same day as capture.
4. PAPILLOMAS (Tumor Score = 1). One small regressed tumor on neck. Turtle released same day as capture.
5. PAPILLOMAS (Tumor Score = 60). Right eye is 60% obstructed by tumors. No large tumors on turtle. Power plant notifications made after contacting FWC. State later asked us to release turtle because rehab locations too full. Spoke to shift manager directly to advise of change. Turtle released same day as capture.
6. PAPILLOMAS (Tumor Score = 106). Lots of large tumors on hind flippers and tail. Power plant notifications made after contacting FWC. State later asked us to release turtle because rehab locations too full. Spoke to shift manager directly to advise of change. Turtle released same day as capture.
7. Strange Tag (PIT Tag #454A777870). Source of tag yet to be determined.
8. PAPILLOMAS (tumor score=47). Turtle released same day as capture.
9. DEAD (NON-CAUSAL MORTALITY). Found floating at surface of barrier net moderately decomposed. Held in freezer for FFWCC state necropsy workshops.
10. RECAPTURE. Turtle was removed from the intake canal, tagged and released at Hutchinson Island on 12/23/09, 3/23/10, 9/22/10, and 1/31/11.
