# IOWA ELECTRIC LIGHT AND POWER COMPANY

General Office CEDAR RAPIDS, IOWA

DUANE ARNOLD ENERGY CENTER PALO, IOWA MARCH 18, 1975 DAEC - 75 - 115

Mr. James G. Keppler, Director Office of Inspection and Enforcement U.S. Nuclear Regulatory Commission - Region III 799 Roosevelt Road Glen Ellyn, Illinois 60137

SUBJECT: Abnormal Occurrence No. A.O. 50-331/75-13 FILE: A-118a A-110

Dear Mr. Keppler:

In accordance with Appendix A to Operating License DPR-49, Technical Specifications and Bases for Duane Arnold Energy Center, please find enclosed a written report on the subject abnormal occurrence.

Very truly yours,

G. G. Hunt Chief Engineer Duane Arnold Energy Center

DLW/GGH/pag

## IOWA ELECTRIC LIGHT AND POWER COMPANY

General Office Cedar Rapids, Iowa

Subject:	Abnormal Occurrence							
Report Number:	A.O. 50-331/75-13							
Report Date:	March 17, 1975							
Occurrence Date:	March 6, 1975							
Facility:	Duane Arnold Energy Center, Palo, Iowa, Unit #1							

#### Identification of Occurrence

APRM upscale alarm rod block setting, reportable per Appendix A to Operating License DPR-49, Specification 1.0.4.a.

#### Description of Occurrence

During a routine review of Surveillance Test results on March 11, 1975 for verification that they were complete and that any deviations from specified results had been noted, corrected and reported, it was determined that a limiting setpoint for operation had been exceeded during a test performed on March 6, 1975.

During the performance of Surveillance Test Procedure No. 42C001, APRM Instrument Functional Test and Calibration (In Run Mode), it was determined that the upscale rod block trip setting of APRM Channel E corresponding to 0% Recirculation Loop Flow was 43.25% (Technical Specification limiting setpoint for operation 42 ± 1% at 0% Recirculation Flow).

## Designation of Apparent Cause of Occurrence

The apparent cause of the occurrence was instrument drift.

#### Analysis of Occurrence

The minimum number of APRM channels per trip system required by Table 3.1-1 of the Technical Specifications were operational, therefore, at no time was there an unsafe plant condition.

#### A.O. No. 50-331/75-13

#### Corrective Action

APRM Channel E was immediately recalibrated and tested satisfactorily.

#### Conclusion

This report was reviewed and approved by the DAEC Operations Committee on March 17, 1975. The Committee concluded that the occurrence did not present a hazard to the health and safety of the public.

. Se sa

G. G. Hunt Chief Engineer Duane Arnold Energy Center
