SUBJECT: Technical Specification Violation 74-12
 FILE: A-110
 A-117

Dear Mr. Keppler:

This letter is to report to you with respect to certain Technical Specification requirements at the Duane Arnold Energy Center.

Problem

Surveillance Test Procedure (STP) 43A004, Weekly and Biweekly Tests, was not performed on October 24, 1974, as required by Technical Specifications, Specification 4.7.A.5 which states "The primary containment oxygen concentration shall be measured and recorded at least twice weekly".

Investigation

STP 43A004 is sent to personnel responsible for performing the check once per week. At that time the first of the biweekly checks is performed and the test form is filed in a folder which shows the date when the second check for the week is to be performed. The first check was performed on October 21, 1974. It should then have been placed in the file dated October 24, 1974; inadvertently, it was placed in the file dated October 28, 1974.

Corrective Action

The Surveillance Program has been revised to require that a separate procedure be provided for each surveillance period.

NOV 11 1974

11/8/74

Conclusion

The DAEC Operations Committee reviewed and approved this report on November 8, 1974. The Committee concluded that there was no hazard to the health and safety of the public.

Very truly yours,

G. G. Hunt
Chief Engineer
Duane Arnold Energy Center
