LARRY D. ROOT
ASSISTANT VICE PRESIDENT
NUCLEAR GENERATION

Mr. Harold Denton, Director
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Dear Mr. Denton:

Transmitted herewith is a revision to our application for amendment to Appendix A (Technical Specifications) to Operating License DPR-49 for the Duane Arnold Energy Center (DAEC). The application (RTS-115) was submitted by letter of August 29, 1979, LDR-79-172.

This revision, consisting of RTS-115A, has been reviewed by the DAEC Operations Committee and the DAEC Safety Committee. A subcommittee has also been established to evaluate the impact of this change on design and operation of the DAEC. Because of the scope of this change and its implications, it is our desire that any license changes resulting from this application be issued no earlier than November, 1982 in order to optimize this assessment.

As stated in the attached description of the proposed change, Appendix B to the Technical Specifications is deleted in its entirety. Due to the scope of the changes included in this amendment, it is anticipated that complete implementation of this Technical Specification Amendment will require approximately 18 months following NRC issuance. The actual implementation time will depend on the actual amendment approved and will consider any potential plant modifications, purchasing additional equipment and training personnel.

A Class III amendment fee of \$4,000 was submitted with the application. Since this is a revision to the application, no additional fee is enclosed.
