

## NOTE TO THE DOCKET FILE

Licensee: Geotechnical Consultants, Inc.  
License No.: 42-27533-01  
Docket No.: 030-34000

Based on the licensee's termination request dated August 5, 2011 (ADAMS Accession # ML112301759), this license is allowed to expire. The licensee stated, in part, that they will continue operations in non-federal areas under Texas Radioactive Materials License L04819. The licensee's license expired on May 31, 2011. I requested in an email dated August 5, 2011 (ADAMS Accession # ML112301740), that the licensee resubmit their letter in pdf format with a signature and asked them to expand their letter to confirm that if they decide to use radioactive material under NRC jurisdiction in the future, they will file for reciprocity in accordance with 10 CFR 150.20. However, as of today, the licensee has not responded. So based on the licensee's termination request to terminate License Number 42-27533-01, NMSB-B has decided that this information is sufficient to allow the license to expire.
