Subject: Re: Query from Sen. Ron Johnson's constituents

Good afternoon,

Could we ticket the requested email (below) from Wisconsin Senator Ron Johnson's office? The Senator's constituents are concerned about long-term storage of spent nuclear fuel (see page 2 of the attached correspondence).

Thank you,

Jenny

Jenny,

There was a variety of emails that I received from our district office but I think this letter is a good summary of all their questions. I am going to go through a couple of other emails and see if I have anything else that is useful.

Thank you,
Deborah

RE: Host Communities' Concerns About Stranded Spent Nuclear Fuel

"Implementing a permanent, safe, and secure disposal solution for the nuclear waste is of concern to the nation, particularly state governments and local communities, because many of the 80 sites where nuclear waste is currently stored are near large population centers or major water sources or consist of shutdown reactor sites that tie up land that could be used for other purposes. In addition, states that have DOE facilities with nuclear waste storage are concerned because of possible contamination to aquifers, rivers and other natural resources."¹

Distinguished Members of the Blue Ribbon Commission on America's Nuclear Future:

Thank you for this opportunity to provide our input to the Blue Ribbon Commission on America's Nuclear Future ("Commission"). We are a group of elected officials representing communities most affected by spent nuclear fuel ("SNF"). The communities we represent are adjacent to and directly impacted by commercial nuclear reactor electric utility sites ("Facilities") producing SNF and onsite dry cask storage of SNF in Independent Spent Fuel Storage Facilities Installations ("ISFSI").

We support the Commission's mission. We believe the Commission must develop recommendations for substantive and comprehensive plans that address the federal government's obligation to responsibly manage and dispose of SNF. We believe that the success of the Commission's

¹ United States Government Accountability Office Report to Congressional Requesters. Nuclear Waste Management. Key Attributes, Challenges, and Costs for the Yucca Mountain Repository and Two Potential Alternatives (GAO-10-48). Page 10. November 2009.

recommendations depends, in large part, on actively engaging communities that host commercial nuclear reactor sites and taking into consideration the numerous impacts these Facilities and their related ISFSI operations have on our communities.

The communities we represent were never intended to become permanent repositories for SNF. Unfortunately, the stark reality is that no civilian nuclear waste has yet been disposed of and there is still no identifiable plan for its final disposition.² The lack of an identifiable plan for handling civilian and government owned SNF has been exasperated by the recent actions of the Federal Administration to withdraw the DOE license for, and defund, Yucca Mountain.³ As a result, SNF and “High-level nuclear waste - one of the nation’s most hazardous substances – is accumulating at 80 sites in 35 states.”⁴ Furthermore, the DOE is now responsible for managing nuclear waste at 121 sites in 39 states.⁵

Our communities are frustrated and becoming increasingly alarmed by the federal government’s inaction in addressing its obligation to dispose of SNF. Further, we are extremely wary of recommendations being made to the Commission to store SNF in our communities for an indefinite period of time. The consequences of such recommendations are unexamined, costly, potentially dangerous, and subject our communities to an unacceptable level of risk. We believe that a serious and responsible consideration of such an option would necessarily include individual site assessments equivalent to those undertaken at Yucca Mountain. Individual site assessments of this nature would add billions of dollars and yet more delay to managing the back end of the nuclear fuel cycle. Therefore, we are extremely concerned by Nuclear Regulatory Chairman Jaczko’s announcement “that the prudent course of action is to direct the (NRC) staff to conduct further analysis and update the Waste Confidence findings to account for the possibility of additional, indefinite (onsite) storage of spent nuclear fuel” and his proposal “that the (NRC) staff be directed to prepare an update to the Waste Confidence Findings and Proposed Rule to account for storage at onsite facilities...for more than 100 years, but no more than 300 years....”⁶

² “The Department of Energy (DOE) has not yet disposed of any civilian nuclear waste and currently has no identifiable plan for handling that responsibility.” Cong. Budget Office Test., Committee on the Budget, U.S. House of Representatives. July 16, 2009.

³ February 2, 2010 DOE files request to suspend the Yucca Mountain license application.

⁶ Chairman Jaczko’s Supplemental Comments on SECY-09-0090 Final Update to the Commission’s Waste Confidence Decision. July 22, 2010. Pages 1 and 2.

Again, our communities never intended to permanently host spent nuclear fuel. Our communities have always operated with the firm understanding that our federal government would comply with the Nuclear Waste Policy Act of 1982 and dispose of the SNF in a deep geological repository consistent with the Act.⁷ As a consequence of federal inaction, we are now hosting SNF with no identifiable plan or timeframe for its final disposition. An unintended consequence of indefinite onsite storage of SNF is that our communities are being challenged with unique health, safety, security, land-use, economic development, and transportation concerns. These unintended consequences must be considered during the Commission's policy and decision making process.

While some of our concerns are unique to our individual communities, we have identified the following points that are common to each of us:

1) LOCAL GOVERNMENTS NEED TO BE CONSULTED AND ACTIVELY ENGAGED IN THE DECISION MAKING PROCESS

Our communities and our local governments will be deeply impacted by the policy options and recommendations being considered by the Commission. Therefore, our local governments must play a critical role in the development of the Commission's policy and recommendations. Involvement at an early stage is the only way to guarantee broad based support – including local government support. Without the support of all levels of government impacted by hosting SNF, including Local and Tribal governments, a project involving a final disposition pathway for SNF is not likely to succeed. It is, therefore, imperative that this Commission engage the local governments hosting SNF to ensure the impacts on each is carefully considered and addressed. We encourage the Commission and federal government to work to gain the support of local governments through an open dialog, education, and support. We would consider it an honor and privilege to participate in this capacity.

2) STRANDING SNF IN ITS CURRENT LOCATIONS IS NOT AN OPTIMAL SOLUTION.

We firmly believe that leaving SNF and high level waste ("HLW") scattered across the nation in more than 100 locations is not in the Nation's best interests nor does it represent an optimal solution to managing SNF. One or more final disposition pathways are needed including a deep geological repository. We believe that Yucca Mountain must not be abandoned as an alternative simply due to political considerations.

3) FISCAL SUPPORT IS IMPERATIVE IN ENSURING LOCAL GOVERNMENT PARTICIPATION IN THE POLICY AND DECISION MAKING PROCESS.

Local governments have a responsibility to ensure that the unique health, safety, security, and socioeconomic concerns of hosting a Facility or ISFSI are addressed in the policy and decision making process. However, the resources necessary to ensure these concerns are addressed are nonexistent at the local level. Some of the communities we represent have populations of less than 1,000 people and we are all struggling to meet our communities' needs with extremely scarce resources. Although the Commission's work is of the utmost importance to our communities, our communities cannot

⁷ This Act, as amended, requires the Department of Energy to begin accepting SNF and HLW by January 31, 1998.

effectively organize, participate, or provide valuable input into the Commission's work. There is simply no local funding to support these activities. Without such ability the policy, decision making process, and recommendations will not be understood and, therefore, less likely to succeed.

Part of the Nuclear Waste Act provides funding for impacted local units of government for technical expertise and education. We strongly believe the Commission's recommendations should build on and support this principle. As host communities to SNF, we believe fiscal support is vital to our ability to participate meaningfully in the Commission's policy and decision making process. Fiscal support is also vital to ensure our communities have access to technical experts whose responsibilities are to our communities; that advocate on behalf of our communities; respond to our issues, concerns, and interests and who we trust; are capable of developing community understanding and support; are capable of articulating technical information so it is understood; and who can assist the parties in compromise. Fiscal support is also necessary to support outreach and educational programs to educate our government officials, public safety personnel, residents, business owners, and other community stakeholders on these critical issues.

4) A COLLABORATIVE EFFORT IS CRITICAL

Community involvement and engagement in a collaborative effort is critical in the process including the development of priorities, goals, objectives, and outcomes. To promote positive outcomes, we believe the process must move beyond simple meetings to active engagement and collaboration in the discussion of technical, political, and other issues. Engagement and collaboration must move beyond simply holding meetings to an approach that builds the development of trust, accountability, and openness among participants. To foster a constructive working relationship, we believe the federal government must be required to (1) collaborate with and engage affected units of government – including local governments – in the policy and decision making process, (2) establish and communicate opportunities for participation in the process, (3) develop, with input from affected units of government, clear goals and intended outcomes that are understood by all, (4) develop clear expectations of all participants, (5) develop ongoing information sharing requirements for all parties involved in the process, (6) develop ongoing educational requirements for all parties involved in the process and (7) provide fiscal support to affected units of government to ensure they can organize, partner, participate in the process, and educate their stakeholders.

We as elected local government officials have a strong understanding of local community values, concerns, and priorities. We have an important role in the local decision making process and are influential in advocating for local values, concerns, and priorities. We need to be assured that our concerns are addressed and that local input and participation is welcomed in the policy and decision making process currently undertaken by the Commission. If afforded an opportunity to actively engage in the Commission's mission and process – including the opportunity to have our local concerns addressed and become educated on the policy and recommendations being formulated by the Commission - we believe policy solutions and recommendations will be identified that may promote opportunities for effective partnerships to ensure the successful legacy of America's nuclear future.

In closing, as our communities simply lack the economic resources required to participate in the vitally important Commission's mission and policy formulation process, we cordially extend an open invitation to the Commission to hold a Commission meeting in any one of our communities so we can personally express and share our communities' critical concerns regarding becoming a de-facto permanent SNF repository with the Commission members.

If the Commission has any questions, please contact Kay Kuhlmann, City Administrator, at the City of Red Wing – Minnesota, at 651.385.3600 (ext 3612).

We, as Host Communities Concerned About Stranded Spent Nuclear Fuel, endorse this statement.
