Dr. Thomas E. Murley
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Attn: Document Control Desk
Washington, D.C. 20555

Subject: Duane Arnold Energy Center
Docket No: 50-331
Op. License No: DPR-49
Response to NRC Generic Letter 89-10,
"Safety Related Motor-Operated Valve
Testing and Surveillance"
File: A-101b

Dear Dr. Murley:

Generic Letter 89-10 recommended that each licensee establish a program to provide for the testing, inspection and maintenance of safety-related motor-operated valves. Supplement 2 to Generic Letter 89-10, "Availability of Program Descriptions" requested that each licensee have the description and schedule for their program in response to the generic letter available on site for NRC review by January 1, 1991.

The purpose of this letter is to inform you that our program plan and schedule are complete and available on site for staff review. As stated in the Generic Letter, licensees were requested to notify the Staff if their program deviated from the guidelines in the Generic Letter. Our program plan does not consider the ability of valves to recover from mispositioning which was recommended in the generic letter. We understand that this issue is currently the subject of discussions being held between the Staff and the BWR Owners' Group in which we participate. Any decision to incorporate an analysis of the valves' ability to recover from mispositioning into the program plan is predicated on the outcome of these discussions.
