Subject: RE: North Anna Telecom for ITAAC

Dennis,

Thank you for the opportunity to discuss John's ITAAC questions. Based on our discussion, Dominion will make the following changes to the Physical Security ITAAC.

Item 6.b – the 2006 date for the Underwriters Laboratories Ballistic Standard 752 will be deleted from the Design Commitment and Acceptance Criteria columns.

Item 11.c.i – will be revised, as follows:

Design Commitment	Inspections, Tests, Analyses	Acceptance Criteria
The alarm system does not allow the status of a detection point, locking mechanism or access control device to be changed by the central alarm station without the knowledge and concurrence of the secondary alarm station.	Tests, inspections, or a combination of tests and inspections of intrusion detection equipment and access control equipment will be performed.	The alarm system does not allow the status of a detection point, locking mechanism or access control device to be changed by the central alarm station without the knowledge and concurrence of alarm station operator in the secondary alarm station.

The changes described above are consistent with the R-COLA and will be reflected in the next submission of the North Anna 3 COLA.

Regards,

Barry

Dennis,

Below are the concerns I have with the North Anna ITAAC.

Physical Security ITAAC's,

2.c Clarification on phase "passable size". What was the criteria used or basis (Regulatory Guide on NEI guidance).

11.c.ii Does not appear to address all aspects of this ITAAC and the current Part 10 is not consistent with R-COLA, or other designs COLA.

Judy,

Can you address Barry's concern below by writing up what you want me to send to Dominion.

Thanks,

Dennis Galvin

Dennis,

To make sure we have the right SMEs available, it would be helpful if you could provide more detail regarding the questions you have. Also, are you referring to FSAR 14.3.4.12, ITAAC for Physical Security Hardware?

Thank you.

Barry
