Indicate One:

- This is an Initial Functionality Assessment (IFA)  
 This is an Immediate Operability Determination (IOD)
1. Deficiency Identification and the Affected Equipment B008 loose connection to Battery Breaker (Bus)
  2. For an IFA: Identify the Specified Function(s)  
For an IOD: Identify the Specified Safety Function Provide DC Power post accident to support all DC required loads for Train B
  3. Conclusion:  
For an IFA, determine FUNCTIONAL / NONFUNCTIONAL  
For and IOD, determine OPERABLE / INOPERABLE  
 Functional / Operable  
 Nonfunctional / Inoperable  
Basis (provide discussion): Battery was not connected properly to bus causing failure of weekly surveillance
  4. Extent of Condition (Required for Inoperable)  
EOC Created (YES or NO) ? Yes  
Describe other train / unit findings (if performed):
