Main Office Inspection Next Inspection Date:9/2016								
PROGRAM SCOPE The licensee is a part of Dow Chemical Company. The licensee possesses 19 specifically licensed fixed gauges used in the production of chemicals. Currently, 3 individuals are involved with use and oversight of the devices including the RSO. Gauges are leak tested annually in accordance with manufacturers specifications. Inventories and shutter checks are performed at required frequencies.								
The gauges are relocated, removed, etc. by the manufacturer. The licensee does not perform any service or maintenance activities on its gauges; these services are performed by the manufacturer.								
Performance Observations								
The plant facility was toured and approximately 10 gauges were observed in conjunction with the licensee's current inventory. The RSO demonstrated survey techniques used if/when a gauge is relocated. Proper lock-out and leak test procedures were also adequately described. Interviews conducted with plant workers revealed that under no circumstances would a vessel be entered without RSO supervision of lock-out/tag- out procedures.
