FOREWORD

Started in 2002, a comprehensive, multi-year project using federal grant funds to improve the quality, timeliness, and accuracy of traffic crash data collection and processing continues into 2006. This includes encouraging and accepting the electronic collection of data, additional error checking and quality assurance, improved crash location and a modern computer infrastructure system.

The 2004 crash data collected and processed is in the second year of production using this new system. The overall quality of the data has been improved with reduced missing data rates and an increase in the frequency of known values. Analysis of yearly trends may be affected by this improvement.

The property damage reporting threshold for crashes in Michigan increased from $400.00 to $1000.00 on January 1, 2004. In the analysis of the data we do not have conclusive evidence that this caused a decrease in crash reporting.

In order to provide familiar data with the highest level of accuracy, the book retains the format used in the past, and we ask the reader to be attentive to all special notes.

EXECUTIVE SUMMARY

The 2004 traffic fatality count was 1,159, down 9.7 percent from the 2003 figure of 1,283. Compared with 2003, injuries were down 5.6 percent and total crashes were down 4.7 percent. These figures translated into a death rate of 1.1 per 100 million miles of travel, down 15.4 percent from the 2003 death rate.

Exposure factors in 2004 showed increases in the number of drivers on Michigan roads and travel mileage, and a decrease in motor vehicle registrations. The number of licensed drivers was up 0.5 percent to 7.2 million, and vehicle miles traveled was up 1.6 percent to 101.8 billion. Motor vehicle registrations were down 1.5 percent to 8.6 million. The last time Michigan experienced a drop in motor vehicle registrations was in 1981.

Consumption of alcohol continues to be a major factor in Michigan crashes, particularly the more serious crashes. In 2004, 3.9 percent of all crashes, including property damage only, were reported to involve drinking. While 19.9 percent of all crashes resulted in injury or death, 42.0 percent of alcohol-related crashes involved injury or death. 32.0 percent of fatal crashes involved drinking.

Data on crashes in this book was obtained from 2004 Michigan Traffic Crash Report Forms (UD-10) submitted by local police departments, sheriffs, and the Department of State Police. Other related information was obtained from the Departments of Transportation, State, and Community Health.

The University of Michigan Transportation Research Institute produced this publication with data on file at the Michigan Department of State Police as of April 11, 2005. We acknowledge, with appreciation, all involved agencies for their assistance.

In addition, we wish to acknowledge the people working in law enforcement and public safety agencies who are responsible for gathering crash data in the field. We rely on their accurate completion of crash reports--without their attention to detail we would be unable to create, maintain, and distribute meaningful crash information.

FOREWORD

Michigan's 2005 mileage death rate of 1.09 is the lowest that the state has ever recorded. This continues a trend that marks a decrease each year since 1999.

Following a national trend, Michigan experienced an increase in motorcycle crashes, fatalities, injuries, and exposure numbers.

Begun in 2002, a comprehensive, multi-year project using federal grant funds to improve the quality, timeliness, and accuracy of traffic crash data collection and processing continues into 2006. This includes encouraging and accepting the electronic collection of data, additional error checking and quality assurance, improved crash location and a modern computer infrastructure system.

The 2005 crash data collected and processed is in the third year of production using this new system. The overall quality of the data has been improved, and analysis of yearly trends may be affected by this improvement.

In order to provide familiar data with the highest level of accuracy, the book retains the format used in the past, and we ask the reader to be attentive to all special notes.

Please visit ***www.michigantrafficcrashfacts.org*** for easy access to all of the 1992 through 2005 information in PDF format.

EXECUTIVE SUMMARY

The 2005 traffic fatality count was 1,129, down 2.6 percent from the 2004 figure of 1,159. Compared with 2004, injuries were down 9.2 percent and total crashes were down 5.9 percent. These figures translated into a death rate of 1.09 per 100 million miles of travel.

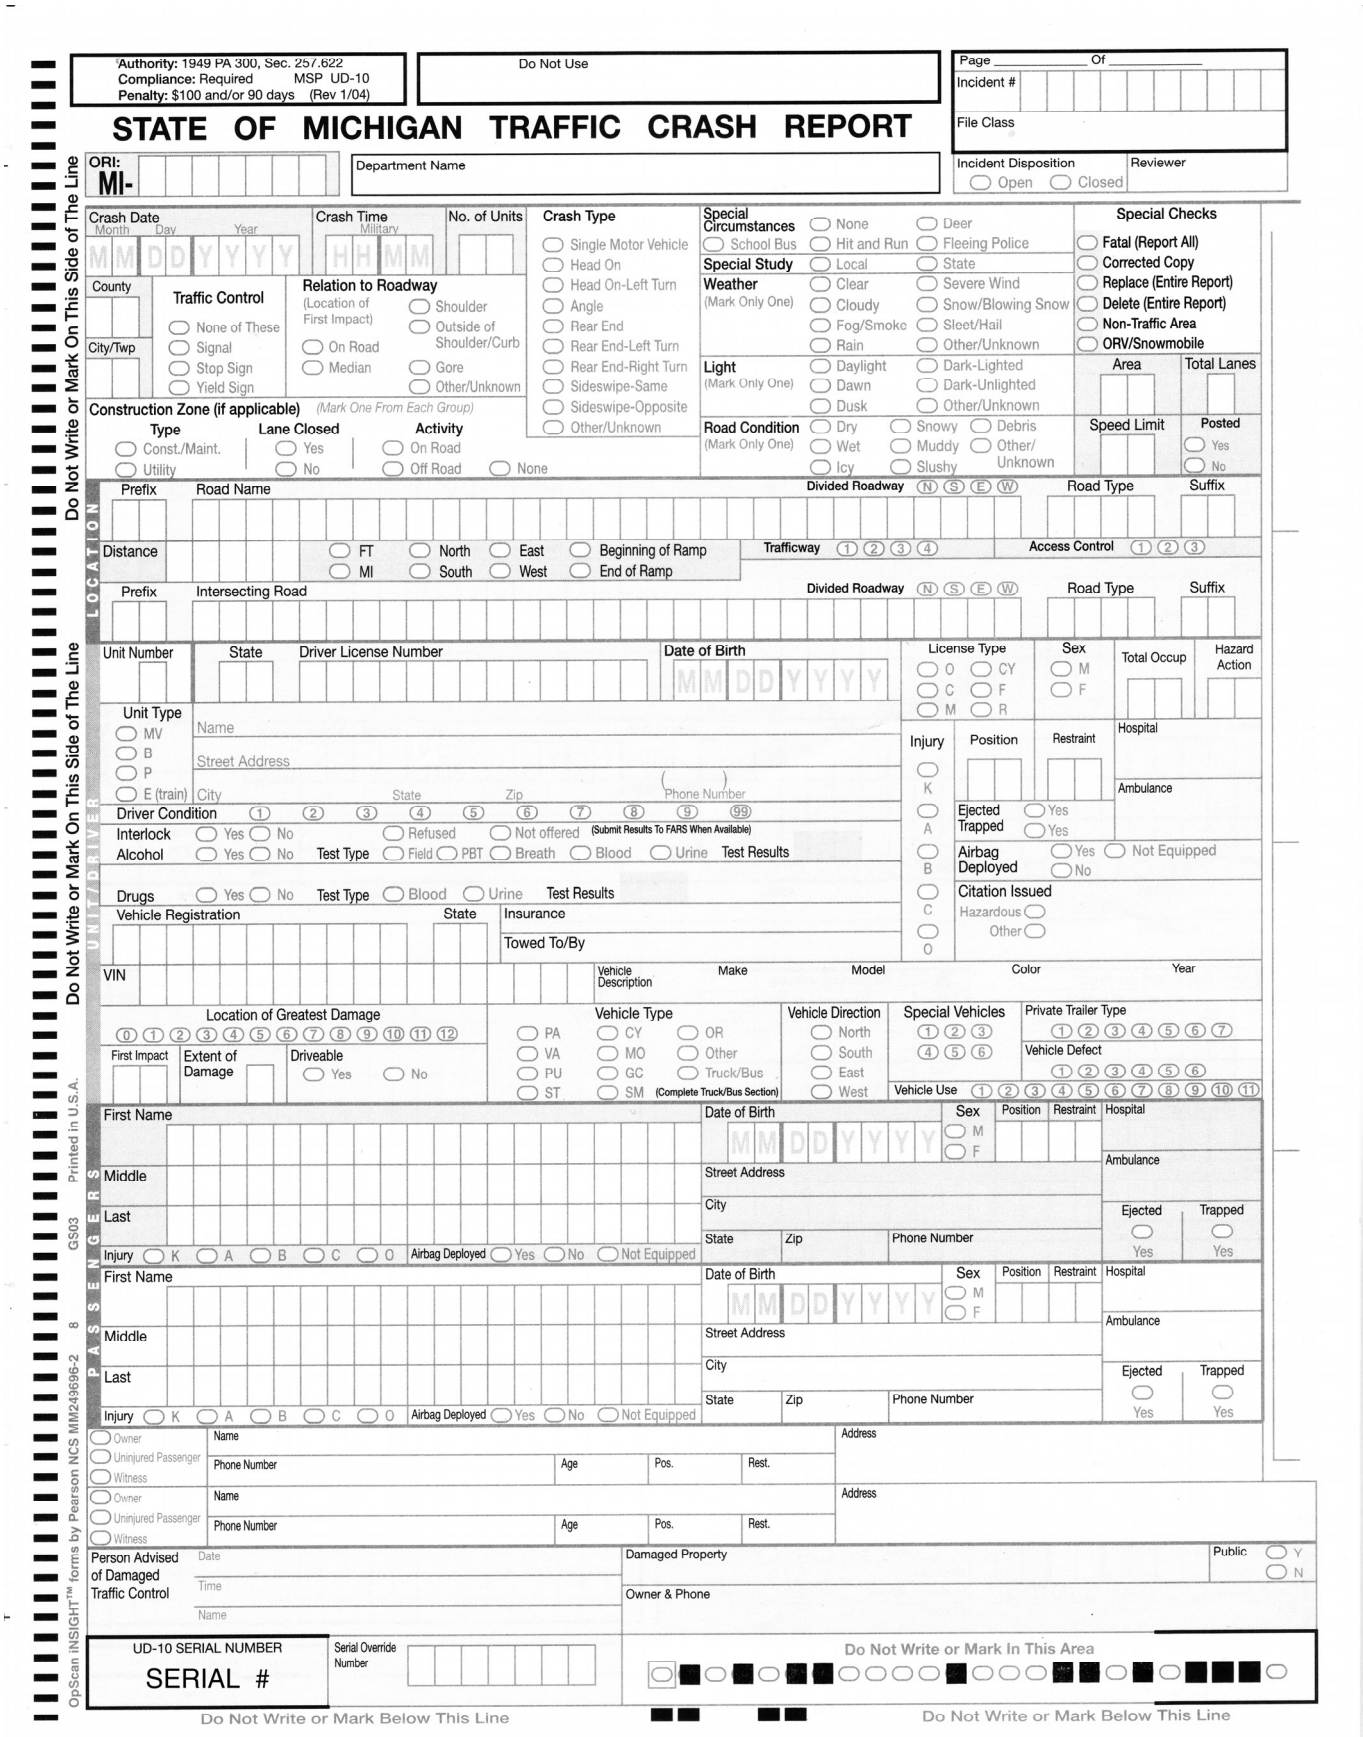

Exposure factors in 2005 showed an increase in the travel mileage, and decreases in the number of drivers on Michigan roads and in motor vehicle registrations. The number of licensed drivers was down 0.1 percent to 7.2 million, and vehicle miles traveled was up 1.3 percent to 103.2 billion. Motor vehicle registrations were down 1.3 percent to 8.5 million. The last time Michigan experienced a drop in motor vehicle registrations was in 2004.

Consumption of alcohol continues to be a major factor in Michigan crashes, particularly the more serious crashes. In 2005, 3.9 percent of all crashes, including property damage only, were reported to involve drinking. While 19.3 percent of all crashes resulted in injury or death, 41.7 percent of alcohol-related crashes involved injury or death. 30.8 percent of fatal crashes involved drinking.

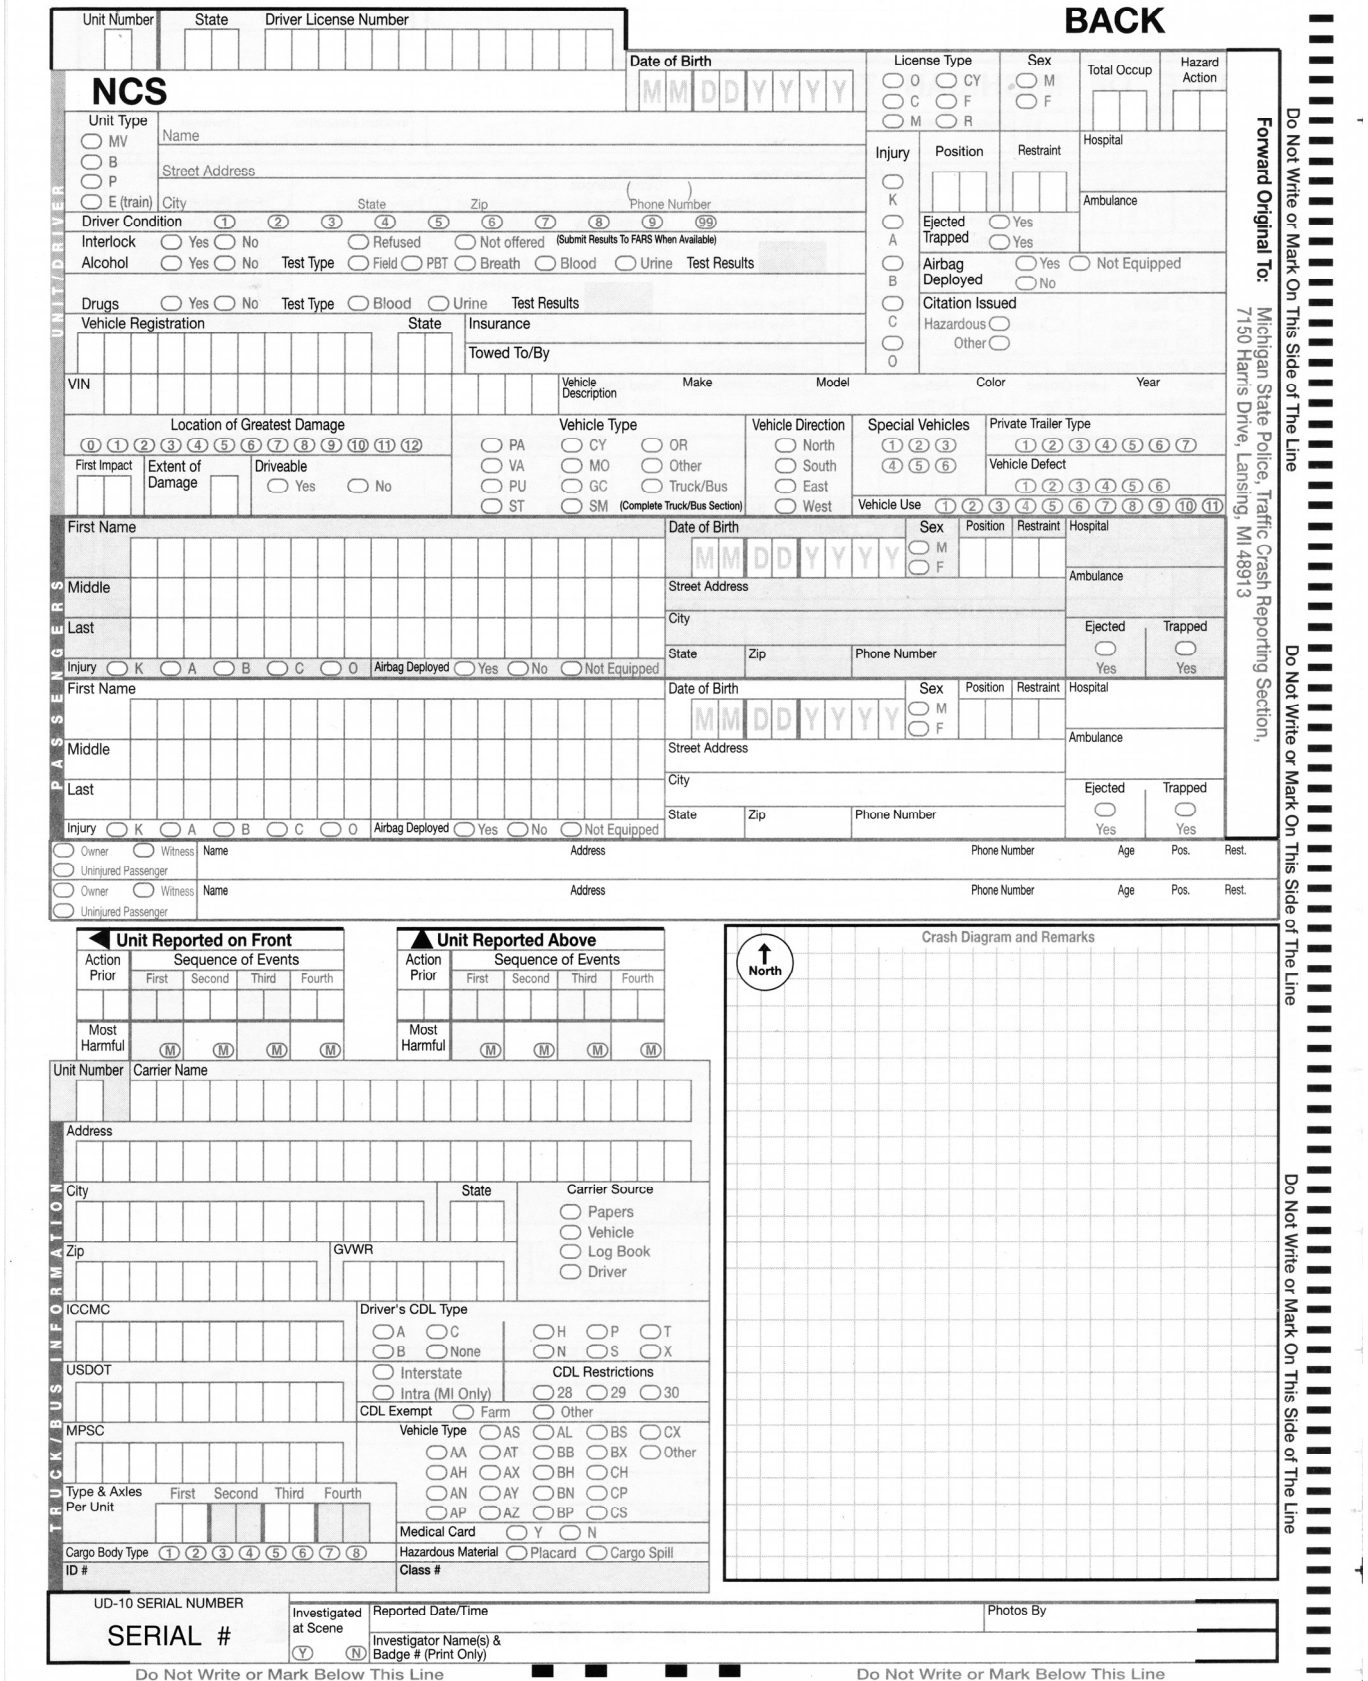

Data on crashes in this book was obtained from 2005 Michigan Traffic Crash Report Forms (UD-10) submitted by local police departments, sheriffs, and the Department of State Police. Other related information was obtained from the Departments of Transportation, State, and Community Health.

The University of Michigan Transportation Research Institute produced this publication with data on file at the Michigan Department of State Police as of March 22, 2006. We acknowledge, with appreciation, all involved agencies for their assistance.

MCL 257.622, Amended 2003 - The driver of a motor vehicle involved in an accident that injures or kills any person, or that damages property to an apparent extent totaling $1,000.00 or more, shall immediately report that accident at the nearest or most convenient police station, or to the nearest or most convenient police officer. The officer receiving the report, or his or her commanding officer, shall immediately forward each report to the director of the Department of State Police on forms prescribed by the director of the Department of State Police *(State of Michigan Traffic Crash Report, also known as the UD-10)*. The forms shall be completed in full by the investigating officer. The director of the Department of State Police shall analyze each report relative to the cause of the reported accident and shall prepare information compiled from reports filed under this section for public use. A copy of the report under this section . . . shall be retained for at least three years at the local police department, sheriff's department, or local state police post making the report. *(As the repository of the UD-10's submitted by all Michigan law enforcement agencies, the Department of State Police processes all UD-10's received at the Criminal Justice Information Center (CJIC). FOREWORD

Michigan's 2006 mileage death rate of 1.04 is the lowest the state has ever recorded. This continues a trend that marks a decrease each year since 1999.

Contrary to the national trend, Michigan experienced a decline in motorcycle crashes, fatalities, injuries, and exposure numbers.

Begun in 2002, a comprehensive, multi-year project using federal grant funds to improve the quality, timeliness, and accuracy of traffic crash data collection and processing continues into 2007. This includes encouraging and accepting the electronic collection of data, additional error checking and quality assurance, improved crash location and a modern computer infrastructure system.

The 2006 crash data collected and processed is in the fourth year of production using this new system. The overall quality of the data has been improved, and analysis of yearly trends may be affected by this improvement.

In order to provide familiar data with the highest level of accuracy, the book retains the format used in the past, and we ask the reader to be attentive to all special notes.

Please visit ***www.michigantrafficcrashfacts.org*** for easy access to all of the 1992 through 2006 information in PDF format.

EXECUTIVE SUMMARY

The 2006 traffic fatality count was 1,084, down 4.0 percent from the 2005 figure of 1,129. Compared with 2005, injuries were down 9.5 percent and total crashes were down 10.1 percent. These figures translated into a death rate of 1.04 per 100 million miles of travel.

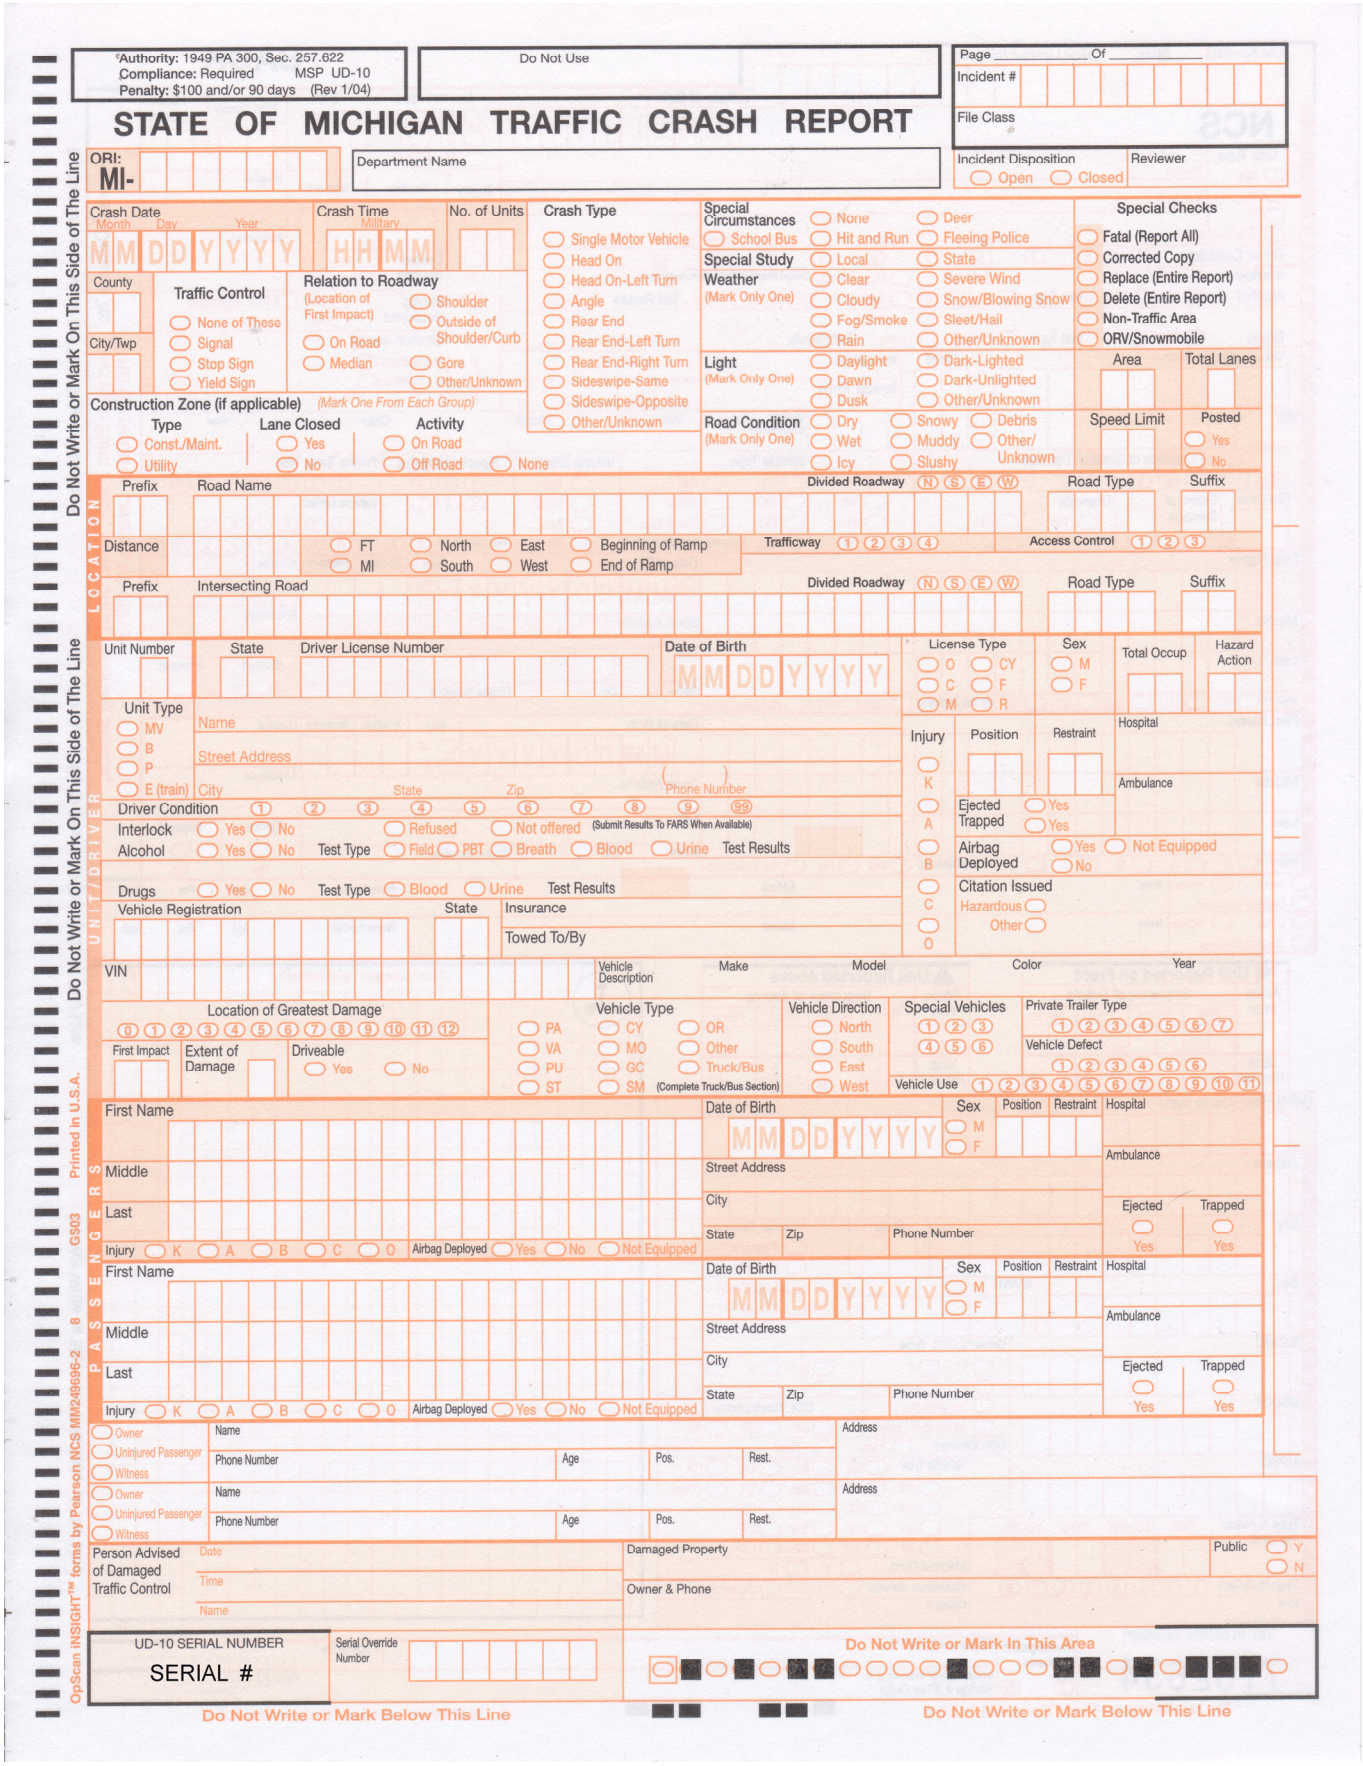

Exposure factors in 2006 showed increases in the travel mileage and number of drivers on Michigan roads, and a decrease in the in motor vehicle registrations. The number of licensed drivers was up 0.3 percent to 7.2 million, and vehicle miles traveled was up 0.9 percent to 104.0 billion. Motor vehicle registrations were down 1.3 percent to 8.4 million.

Consumption of alcohol continues to be a major factor in Michigan crashes, particularly the more serious crashes. In 2006, 4.0 percent of all crashes, including property damage only, were reported to involve drinking. While 19.4 percent of all crashes resulted in injury or death, 43.0 percent of alcohol-related crashes involved injury or death. 34.8 percent of fatal crashes involved drinking.

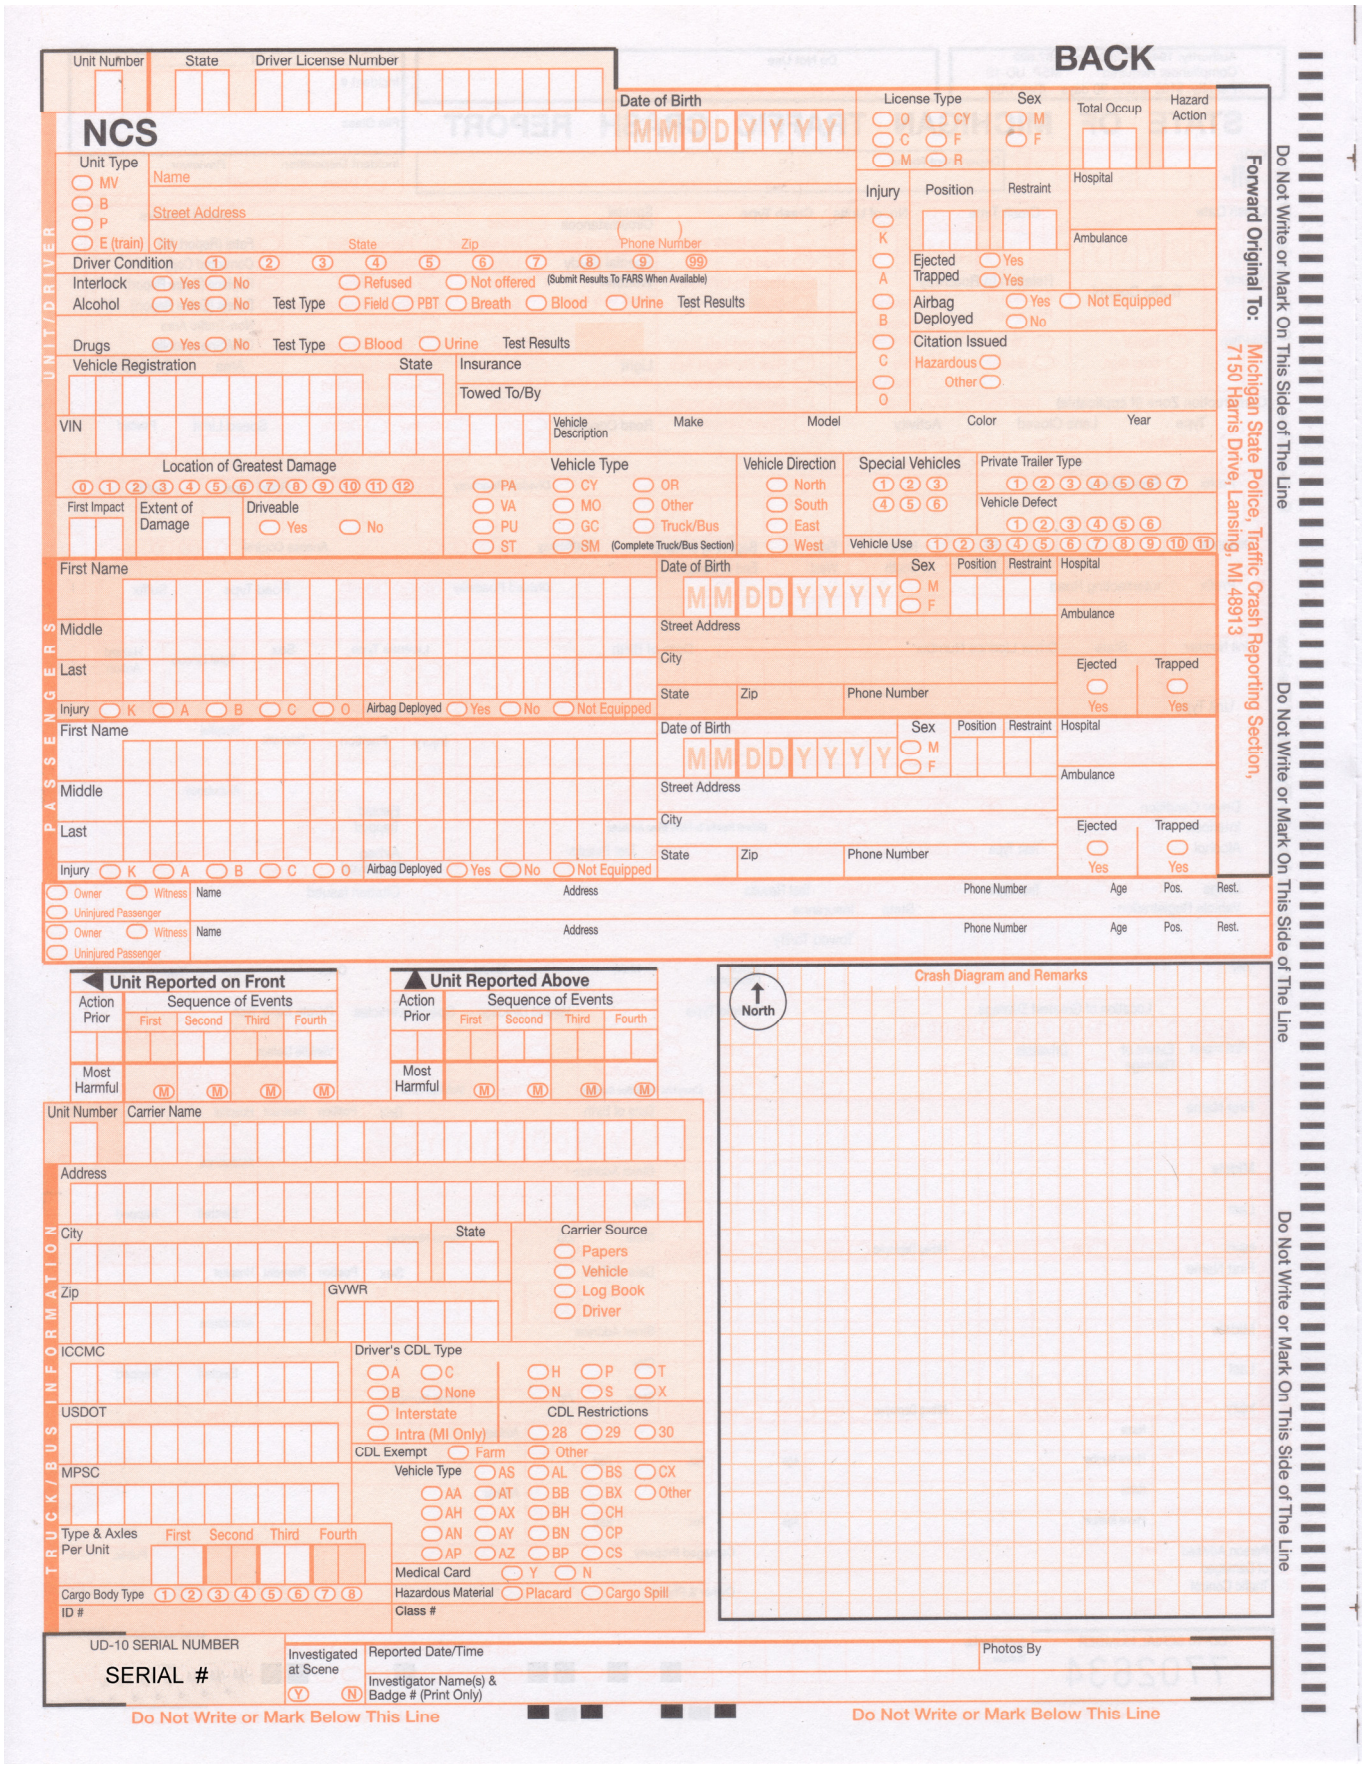

Data on crashes in this book was obtained from 2006 Michigan Traffic Crash Report Forms (UD-10) submitted by local police departments, sheriff's offices, and the Department of State Police. Other related information was obtained from the Departments of Transportation, State, and Community Health.

The University of Michigan Transportation Research Institute produced this publication with data on file at the Michigan Department of State Police as of March 30, 2007. We acknowledge, with appreciation, all involved agencies for their assistance.

FOREWORD

In 2007, 1,084 fatal traffic crashes occurred on Michigan's roadways, the same as in 2006. This remains the lowest the state has ever recorded.

The Michigan Traffic Crash Facts project began in 2002 as a comprehensive, multi-year project using federal grants to improve the quality, timeliness and accuracy of traffic crash data collection and processing.

The project encourages the acceptance of electronic data collection, additional error checking, quality assurance, and improved crash location with a modern computer infrastructure system.

The 2007 crash data was collected and processed using this new electronic system. Over the past five years of utilizing this system, the overall quality of the data has improved and analysis of the yearly trends may reflect this improvement.

Please visit ***www.michigantrafficcrashfacts.org*** for easy access to crash data from 1992-2007 in PDF format.

EXECUTIVE SUMMARY

The 2007 traffic fatality count was 1,084, identical to the 2006 count. Compared with 2006, injuries were down 1.7 percent, while total crashes increased 2.8 percent. These figures translated into a death rate of 1.04 per 100 million miles of travel.

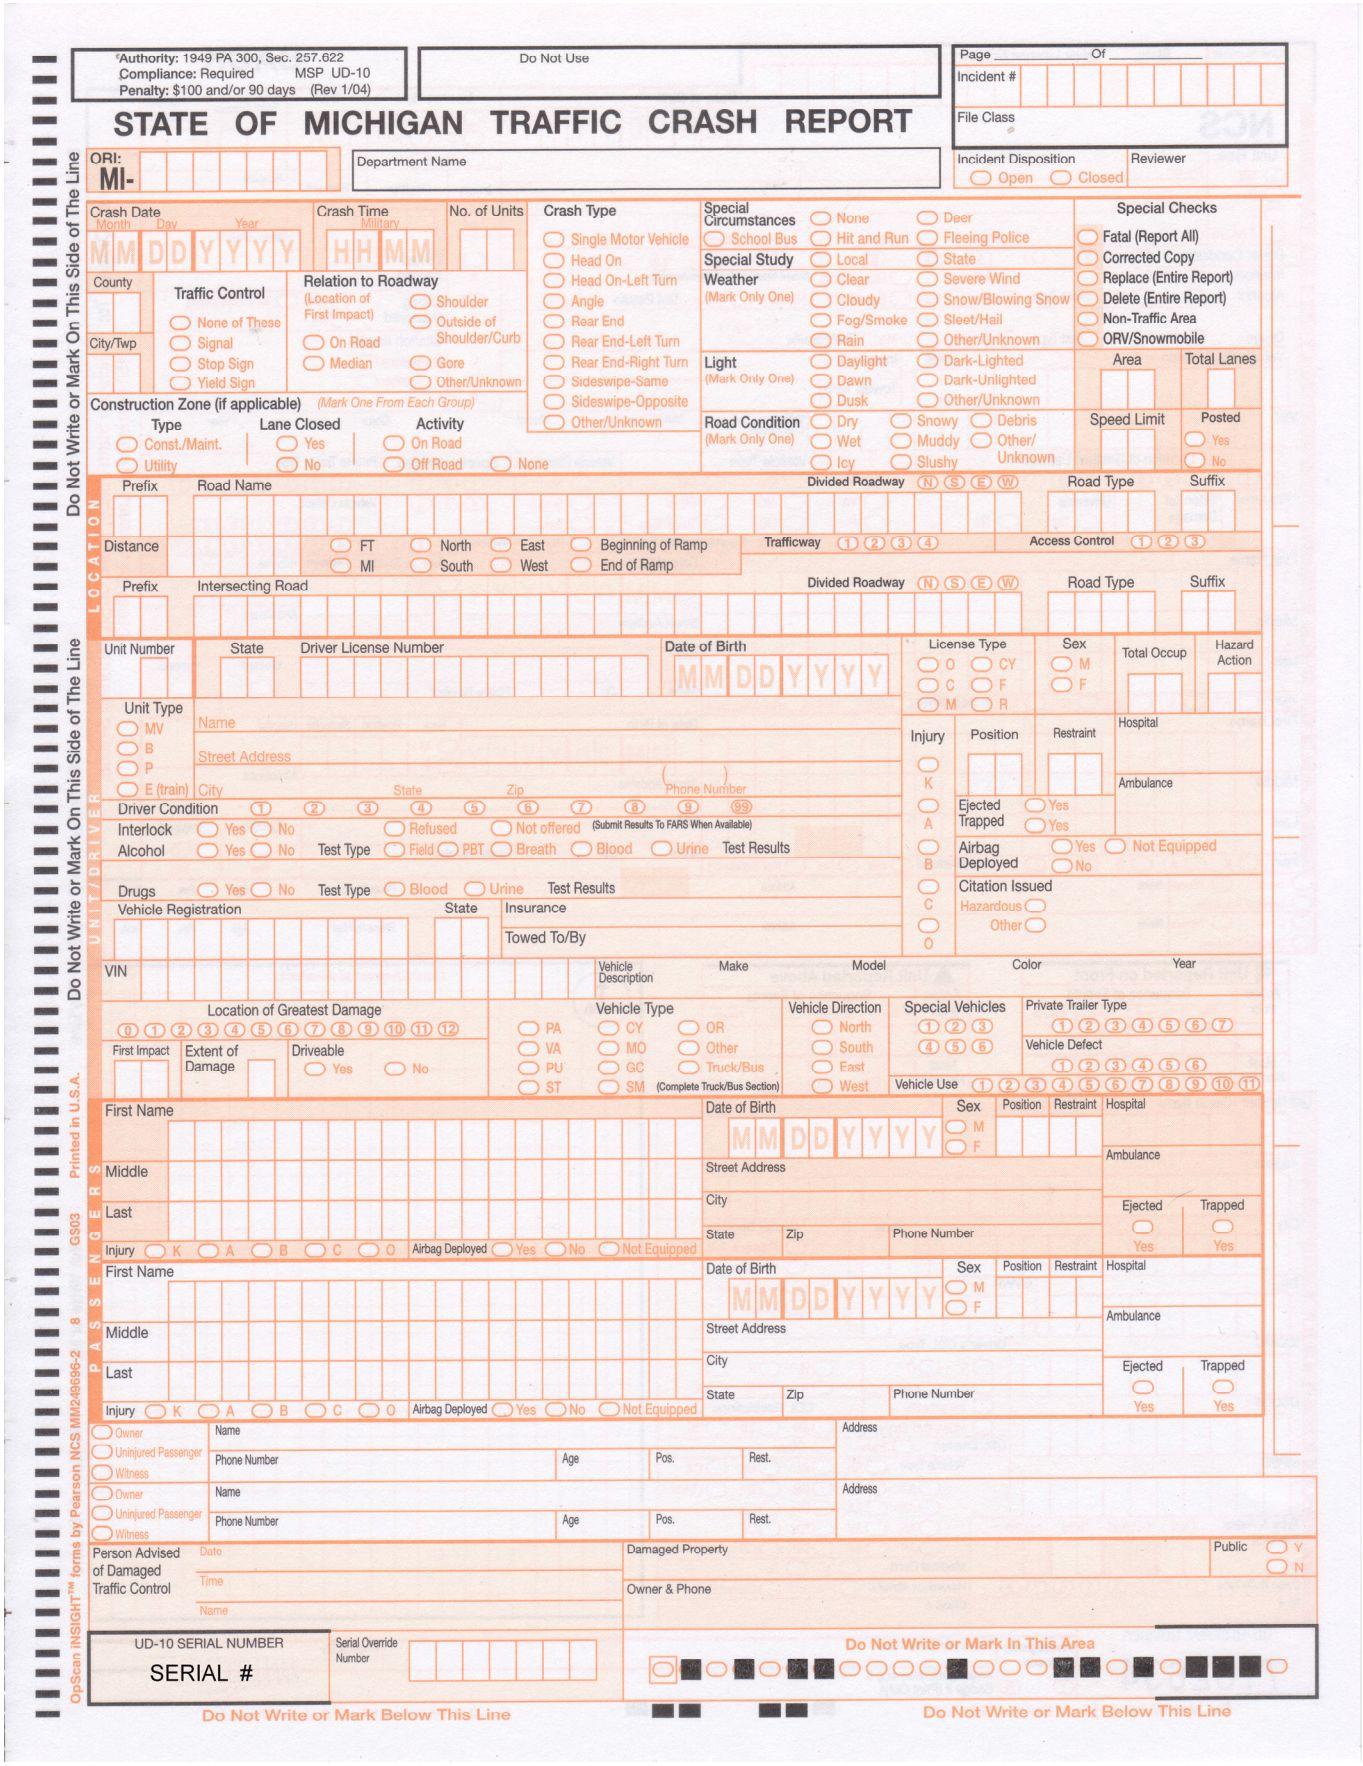

Exposure factors in 2007 showed increases in travel mileage and the number of motor vehicle registrations, and a decrease in the number of drivers on Michigan roads. Vehicle miles traveled was up 0.6 percent to 104.6 billion, motor vehicle registrations were up 0.7 percent to 8.4 million, and the number of licensed drivers was down 1.4 percent to 7.1 million.

Consumption of alcohol continues to be a major factor in Michigan crashes, particularly the more serious crashes. In 2007, 3.8 percent of all crashes, including property damage only, were reported to involve drinking. While 18.7 percent of all crashes resulted in injury or death, 42.2 percent of alcohol-related crashes involved injury or death. 31.7 percent of fatal crashes involved drinking.

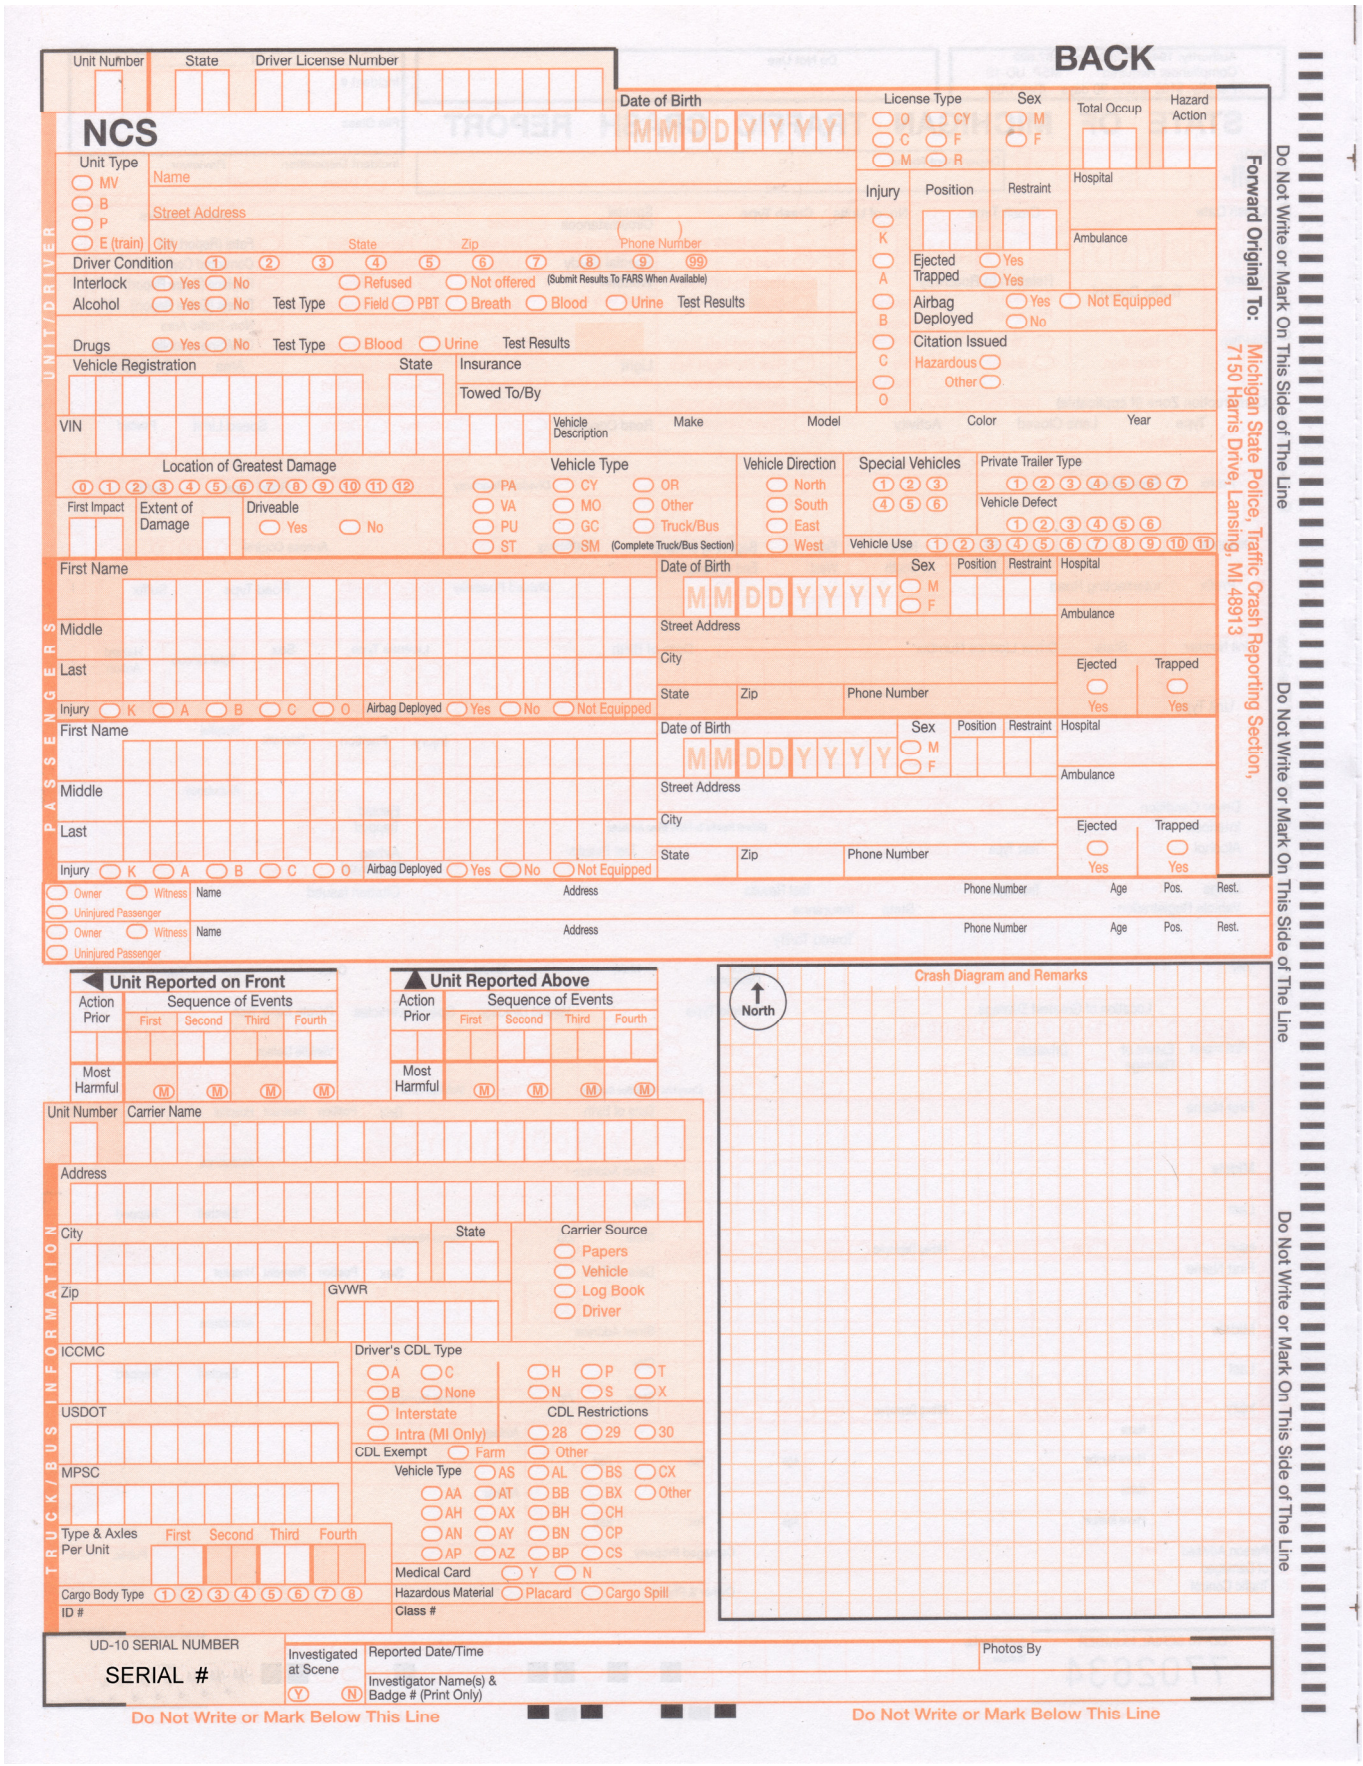

Data on crashes in this book was obtained from 2007 Michigan Traffic Crash Report Forms (UD-10) submitted by local police departments, sheriff's offices, and the Department of State Police. Other related information was obtained from the Departments of Transportation, State, and Community Health.

The University of Michigan Transportation Research Institute produced this publication with data on file at the Michigan Department of State Police as of March 8, 2008. We acknowledge, with appreciation, all involved agencies for their assistance.

MOST SEVERE OUTCOME IN HBD CRASHES BY COUNTY

Note: While the Michigan *Traffic Crash Report* (UD-10) requests officers to report Bodily Alcohol Content (BAC) of all persons tested for alcohol after a traffic crash, only the BAC testing of deceased motor vehicle drivers and deceased railroad train engineers is required by law. Consequently, alcohol involvement in nonfatal crashes is frequently unreported, and is therefore generally believed to be higher than indicated in this table.

MOST SEVERE OUTCOME IN HBD CRASHES BY COUNTY

Note: While the Michigan *Traffic Crash Report* (UD-10) requests officers to report Bodily Alcohol Content (BAC) of all persons tested for alcohol after a traffic crash, only the BAC testing of deceased motor vehicle drivers and deceased railroad train engineers is required by law. Consequently, alcohol involvement in nonfatal crashes is frequently unreported, and is therefore generally believed to be higher than indicated in this table.
