Subject: STP - Comment on 03.09.01-1 Response

John,

Below are staff's feedback on NINA's response to RAI 03.09.01-1 submitted in NINA letter U7-C-NINA-NRC-110112 dated 8/24/2011:

Response Item#1 is acceptable in which WEC has revised its response to address ACSTIC2 rather than ACSTIC.

Response Item#2 is not complete as WEC committed to perform more analysis (1) to demonstrate the validity of the assumption using a zero pressure fluctuation at the water-steam interface and (2) to demonstrate ACSTIC2 results of the analysis model to be in good agreement with respect to the fluid modal frequencies and pressure amplitude when comparing to the K6 plant measured data.

Response Item#3 needs to provide ACSTIC2 Version 1.3 output results in comparing the with that of the Version 1.1 which was used as the baseline for ACSTIC2. The V&V of Version 1.3 should include an ECN page indicating the changes from previously versions.

Please be prepared to discuss in the next meeting, tentatively 9/14/2011.

Regards

Tom Tai
