Dear Mr. Humphrey:

This week an N.S.P. atomic energy plant dumped radioactive waste into the Mississippi River. We are told that the amount of radioactivity will not be harmful. However, radiation is not natural to an environment in any amount so how can anybody say radioactive water isn't harmful even though it may be a small amount? If accidents like this continue to occur it would be doubtful that no harm would result. What action can be taken to prevent these accidents?

I would very much appreciate a reply since this letter is part of a project for my Environmental Conservation class.

Sincerely yours,

Becky Balsiger
